Edition

# Introduction to Feedback Control

Li Qiu • Kemin Zhou

PEARSON

# Contents

<b>Preface</b>	<b>9</b>
<b>1 Overview</b>	<b>13</b>
1.1 Introduction . . . . .	13
1.2 Basic Concepts . . . . .	17
1.3 Basic Structures of Feedback Systems . . . . .	19
1.4 About This Book . . . . .	21
Problems . . . . .	23
Notes and References . . . . .	23
<b>2 Modeling and Simulation</b>	<b>25</b>
2.1 Modeling Based on First Principles . . . . .	26
2.1.1 Electrical systems . . . . .	26
2.1.2 Mechanical systems . . . . .	29
2.1.3 Electromechanical systems . . . . .	30
2.2 State Space Model and Linearization . . . . .	33
2.3 Transfer Functions and Impulse Responses . . . . .	39
2.4 Simplifying Block Diagrams . . . . .	43
2.5 Transfer Function Modeling . . . . .	46
2.6 MATLAB Manipulation of LTI Systems . . . . .	48
2.7 Simulation and Implementation of Systems . . . . .	51
2.7.1 Hardware simulation and implementation . . . . .	51
2.7.2 Software simulation and implementation . . . . .	54
2.8 MISO and SIMO Systems . . . . .	56
2.9 Modeling of Closed-Loop Systems . . . . .	59

2.10	Case Studies . . . . .	65
2.10.1	Ball and beam system . . . . .	65
2.10.2	Inverted pendulum system . . . . .	67
	Problems . . . . .	69
	Notes and References . . . . .	74
<b>3</b>	<b>Stability and Stabilization</b>	<b>75</b>
3.1	Concept of Stability . . . . .	76
3.2	Routh Criterion . . . . .	80
3.3	Other Stability Criteria . . . . .	88
3.4	Robust Stability . . . . .	94
3.5	Stability of Closed-Loop Systems . . . . .	98
3.6	Pole Placement Design . . . . .	107
3.7	All Stabilizing Controllers* . . . . .	113
3.8	All Stabilizing 2DOF Controllers* . . . . .	118
3.9	Case Studies . . . . .	123
3.9.1	Ball and beam system . . . . .	123
3.9.2	Inverted pendulum system . . . . .	126
	Problems . . . . .	132
	Notes and References . . . . .	135
<b>4</b>	<b>Time-Domain Analysis</b>	<b>139</b>
4.1	Responses to Typical Input Signals . . . . .	140
4.2	Step Response Analysis . . . . .	145
4.3	Dominant Poles and Zeros . . . . .	155
4.4	Steady-State Response and System Type . . . . .	158
4.5	Internal Model Principle . . . . .	165
4.6	Undershoot . . . . .	168
4.7	Overshoot . . . . .	172
4.8	Time-Domain Signal and System Norms . . . . .	178
4.9	Computation of the Time-Domain 2-Norm . . . . .	182
	Problems . . . . .	187
	Notes and References . . . . .	194
<b>5</b>	<b>Root-Locus Method</b>	<b>197</b>
5.1	Root-Locus Techniques . . . . .	198
5.2	Derivations of Root-Locus Rules* . . . . .	207
5.3	Effects of Adding Poles and Zeros . . . . .	210
5.4	Phase-Lag Controller . . . . .	211
5.5	PI Controller . . . . .	216
5.6	Phase-Lead Controller . . . . .	217
5.7	PD Controller . . . . .	223
5.8	Lead-Lag or PID Controller . . . . .	227
5.9	2DOF Controllers . . . . .	230
5.10	General Guidelines in Root-Locus Design . . . . .	231

5.11	Complementary Root Locus . . . . .	231
5.12	Strong Stabilization . . . . .	234
5.13	Case Study – Ball and Beam System . . . . .	238
	Problems . . . . .	242
	Notes and References . . . . .	245
<b>6</b>	<b>Frequency-Domain Analysis</b>	<b>246</b>
6.1	Frequency Response . . . . .	247
6.2	Bode Diagrams . . . . .	256
6.3	Nyquist Stability Criterion . . . . .	264
6.4	Gain Margin and Phase Margin . . . . .	272
6.5	Closed-Loop Frequency Response . . . . .	277
6.6	Nichols Chart . . . . .	280
6.7	Riemann Plot . . . . .	283
	Problems . . . . .	287
	Notes and References . . . . .	290
<b>7</b>	<b>Classical Design in Frequency Domain</b>	<b>291</b>
7.1	Phase-Lag Controller . . . . .	292
7.2	PI Controller . . . . .	296
7.3	Phase-Lead Controller . . . . .	298
7.4	PD Controller . . . . .	304
7.5	Lead-Lag or PID Controller . . . . .	307
7.6	Ziegler and Nichols Tuning Rules . . . . .	310
7.6.1	Ziegler and Nichols first method . . . . .	310
7.6.2	Frequency-response analysis of the Ziegler and Nichols tuning rules . . . . .	311
7.6.3	Ziegler and Nichols second method . . . . .	315
7.7	Derivative Control . . . . .	316
7.8	Alternative PID Implementation . . . . .	320
7.9	Integral Control and Antiwindup . . . . .	321
7.10	Design by Loopshaping . . . . .	324
7.11	Bode’s Gain and Phase Relation . . . . .	326
7.12	Bode’s Sensitivity Integral . . . . .	331
	Problems . . . . .	333
	Notes and References . . . . .	335
<b>8</b>	<b>Performance and Robustness</b>	<b>337</b>
8.1	Frequency-Domain 2-Norm of Signals and Systems . . . . .	337
8.2	Frequency-Domain $\infty$ -Norm of Systems . . . . .	345
8.3	Model Uncertainties and Robust Stability . . . . .	349
8.4	Chordal and Spherical Distances . . . . .	357
8.5	Distance between Systems . . . . .	360

## Contents

8.6	Uncertainty and Robustness . . . . .	366
	Problems . . . . .	373
	Notes and References . . . . .	376
<b>9</b>	<b>Optimal and Robust Control</b> . . . . .	<b>377</b>
9.1	Controller with Optimal Transient . . . . .	377
9.2	Controller with Weighted Optimal Transient . . . . .	384
9.3	Minimum-Energy Stabilization . . . . .	390
9.4	Derivation of the Optimal Controller* . . . . .	392
9.5	Optimal Robust Stabilization . . . . .	397
9.6	Stabilization with Guaranteed Robustness . . . . .	406
	Problems . . . . .	410
	Notes and References . . . . .	412
<b>A</b>	<b>Laplace Transform</b> . . . . .	<b>413</b>
A.1	Definition . . . . .	413
A.2	Properties . . . . .	414
A.3	Inverse Laplace Transform . . . . .	417
	Problems . . . . .	422
	Notes and References . . . . .	422
<b>B</b>	<b>Matrices and Polynomials</b> . . . . .	<b>424</b>
B.1	Matrices . . . . .	424
B.2	Polynomials . . . . .	426
	Problems . . . . .	430
	Notes and References . . . . .	430
<b>C</b>	<b>Answers to Selected Problems</b> . . . . .	<b>431</b>
C.1	Chapter 1 . . . . .	431
C.2	Chapter 2 . . . . .	431
C.3	Chapter 3 . . . . .	434
C.4	Chapter 4 . . . . .	435
C.5	Chapter 5 . . . . .	437
C.6	Chapter 6 . . . . .	438
C.7	Chapter 7 . . . . .	439
C.8	Chapter 8 . . . . .	440
C.9	Chapter 9 . . . . .	440
	<b>Bibliography</b> . . . . .	<b>442</b>
	<b>Index</b> . . . . .	<b>449</b>
