Advanced Manufacturing

Advanced Design and Manufacturing Based on STEP

 Springer

Contents

List of Contributors.....	xxi
1 STEP in a Nutshell.....	1
<i>T. Kramer and X. Xu</i>	
1.1 Introduction	1
1.2 History of STEP	2
1.3 Objectives of STEP	3
1.4 Overview of STEP Parts.....	4
1.5 Information Modelling Using EXPRESS and EXPRESS-G	5
1.6 Data Representation.....	7
1.6.1 Part 21 Files	7
1.6.2 XML Files	9
1.6.3 STEP Data Access Interface (SDAI).....	10
1.7 STEP Integrated Resources	11
1.8 Application Protocol (AP).....	12
1.8.1 AAM (Application Activity Model).....	13
1.8.2 ARM (Application Reference Model).....	13
1.8.3 AIM (Application Interpreted Model).....	14
1.8.4 UOF (Unit of Functionality)	14
1.8.5 AIC (Application Interpreted Construct).....	14
1.8.6 AM (Application Module)	15
1.8.7 Conformance Classes	15
1.9 Conformance Testing	15
1.10 STEP-NC.....	16
1.11 STEP into the Future	17
Appendix Sources of Information about STEP.....	18
References.....	19
2 Feature-based Process Planning Based on STEP.....	23
<i>T. Kramer and F. Proctor</i>	
2.1 Introduction	23
2.2 Process Plans	24
2.2.1 Definition and Desiderata.....	24
2.2.2 ISO 14649 and AP 238 Process Planning Languages	28
2.2.3 AP 240 Process Planning Language.....	31
2.2.4 FBICS-ALPS Process Planning Languages	33
2.2.5 Summary Table	36

2.3	Features	36
2.4	Feature-based Process Planning	38
2.4.1	Overview of Feature-based Process Planning	38
2.4.2	Features and Process Planning	39
2.4.3	Feature-based Process Planning in FBICS	39
2.5	FBICS to ISO 14649	45
2.6	Conclusion	46
	References	47
3	A Heuristic STEP-NC Based Process Planning Tool for Sequencing NC Machining Operations	49
	<i>U. Berger, R. Kretschmann and K. P. Arnold</i>	
3.1	Introduction	49
3.2	State of the Art and Related Work	51
3.2.1	NC Process Chain	51
3.2.2	Challenge and Problems in the Process Chain	52
3.2.3	STEP-NC – STEP Compliant Numerical Control	53
3.2.4	Process Planning in the STEP-NC Process Chain	55
3.2.5	Mathematical Formulizing of the Statement of Problem	58
3.3	Objectives and Requirements for Sequencing of Machining Operations	59
3.3.1	Reasoning for a New Solution	59
3.3.2	Objectives and Requirements of a New Solution	60
3.4	Approach for STEP-NC Machining Operations Sequencing	60
3.4.1	Methodology and Keynote	60
3.4.2	Functional Principle and Application Scope	61
3.4.3	Architecture and Modules	63
3.4.4	Model for Workplan Representation and Processing	63
3.4.5	Workflow for the Knowledge-based NC Programming System	68
3.4.6	Approach for Sequencing Algorithm	70
3.5	Technical Realization and Evaluation	72
3.5.1	Technical Realization	72
3.5.2	Evaluation of the Approach	72
3.6	Conclusion and Outlook	74
	References	75
4	STEPNC++ – An Effective Tool for Feature-based CAM/CNC	79
	<i>J. Michaloski, T. Kramer, F. Proctor, X. Xu, S. Venkatesh, and D. Odendahl</i>	
4.1	Introduction	79
4.2	Feature-based CAM to Feature-based CNC	81
4.3	Feed-forward Tolerancing	85
4.4	Smarter Machining Process Parameterization	89
4.5	STEPNC++ Implementation	91
4.6	Validation and Analysis	95

4.7 Discussion	101
Disclaimer.....	102
References.....	102
5 A STEP-Compliant Approach to Turning Operations.....	105
<i>Y. Yusof and K. Case</i>	
5.1 Introduction	105
5.1.1 Standard Product Data Exchange.....	106
5.1.2 STEP-NC Environment for Manufacturing.....	107
5.2 Related Work.....	108
5.3 Design of a STEP Compliant System for Turning Operations (SCSTO).....	110
5.4 Case Study Component	118
5.5 Conclusion.....	120
References.....	121
6 Circular Sawblade Stone Cutting Technology Based on STEP-NC	125
<i>J. Garrido Campos</i>	
6.1 Introduction	125
6.2 Stone Cutting Process Needs.....	128
6.3 Understanding and Modelling Stone Cutting Processes.....	129
6.3.1 Stone Cutting Processes	129
6.3.2 Automatic Stone Cutting Machines	130
6.3.3 An Example.....	132
6.4 STEP-NC Data Model for Sawblade Stone Cutting.....	133
6.4.1 Disc Sawblade Cutting Features.....	134
6.4.2 Sawblade Cutting Operation Data.....	136
6.4.3 Data Model Implementation.....	139
6.5 Conclusions	140
Acknowledgments	141
References.....	141
7 Open Platform Development for STEP-compliant CNC.....	145
<i>T. Hu, C. Zhang, R. Liu and L. Yang</i>	
7.1 Introduction	145
7.2 Requirement Analysis	146
7.2.1 Function Level Requirement Analysis	146
7.2.2 Implementing Level Requirement Analysis.....	149
7.3 System Structure.....	150
7.4 Design Specification of Engine Based System.....	152
7.4.1 Design of Decision Unit (DU).....	153
7.4.2 Generation of Function Description Data (FDD).....	153
7.4.3 Design of EMI.....	157
7.4.4 Design of SE	157
7.4.5 Design of EtherMC Hardware Platform.....	159

7.4.6	Secondary Development Scenario.....	161
7.5	Prototype Development	161
7.5.1	Design of DU	161
7.5.2	Design of FDD	162
7.5.3	Hooking up FDD with SE and HMI.....	166
7.6	Conclusion.....	167
	Acknowledgment.....	167
	References.....	168

8 STEP-NC in Support of Machining Process Optimization 169

L. Xu

8.1	Introduction	169
8.2	Cutting Force in Machining Processes	172
8.3	Tool Path Cross-section in Milling.....	174
8.4	Parameterization of the Tool Path Cross-section.....	176
8.5	Force-based Feed Optimization.....	179
8.5.1	Feed Derivation.....	180
8.5.2	Multiple Machine System Constraints	181
8.5.3	Downward Feed Optimization	181
8.6	Other Optimization Methods.....	182
8.6.1	Tool Life-based Optimization	182
8.6.2	Volume-based Optimization	184
8.6.3	Constant-Chip Optimization	185
8.6.4	Machine System Dynamics.....	187
8.6.5	Feed Lag.....	188
8.7	Optimization Implementation Plans	188
8.7.1	Implementation at CAM.....	189
8.7.2	Implementation on CNC	189
8.7.3	Implementation with an Independent System	190
8.7.4	Example of Optimization with an Independent System	191
8.8	Conclusions	192
	References.....	194

9 Achieving a STEP-NC Enabled Advanced NC Programming Environment..... 197

M. Rauch, R. Laguionie and J.Y. Hascoet

9.1	Introduction	197
9.2	A New Role for the NC Controller into the Numerical Chain	198
9.2.1	Advanced CNC Programming and Machining.....	199
9.2.2	High-level Tool-path Generation	203
9.3	STEP-NC Platform for Advanced and Intelligent Manufacturing (SPAIM).....	204
9.3.1	Machining a Part from a STEP-NC File.....	205
9.3.2	A STEP-NC Platform for Industrial Machine Tools	206
9.3.3	Benefits of a STEP-NC Enabled Controller	209
9.3.4	Toward Advanced CNC Programming	211

9.4 Conclusions	212
References.....	213
10 STEP-compliant CNC Systems, Present and Future Directions.....	215
<i>V. K. Nguyen and J. Stark</i>	
10.1 The Traditional Numerical Control Environment	215
10.2 The STEP-NC Standard	217
10.2.1 Details of the STEP-NC Standard	219
10.2.2 Characteristics of STEP-NC.....	219
10.3 Limitations of STEP-NC	221
10.4 The Current State of STEP-NC Practice and Research	222
10.5 The Current Problem Statement	223
10.6 The Next Steps Beyond the State of the Art.....	224
10.6.1 Data and Information in the PLM Environment.....	225
10.6.2 Next Generation Controller.....	227
10.7 Conclusions	228
Acknowledgment	230
References.....	230
11 Standardised Process Control System for CNC Manufacturing.....	233
<i>S. Kumar and S. T. Newman</i>	
11.1 Introduction	233
11.2 Process Control.....	234
11.2.1 Definitions.....	237
11.2.2 Requirements for Developing Process Control Systems.....	237
11.2.3 Process Control Solutions for CNC Machine Tools.....	238
11.3 Review of Process Control Systems.....	242
11.4 A Standardised Process Control Framework	243
11.5 Process Control Information Model	245
11.5.1 STEP-NC Compliant Product and Manufacturing Information Model	245
11.6 A Computational Prototype of Standardised Process Control System (SProCS).....	248
11.7 Realisation of SProCS	252
11.8 Conclusions	255
Acknowledgment	257
References.....	257
12 A STEP-NC Compliant Methodology for Modelling Manufacturing Resources.....	261
<i>A. Nassehi and P. Vichare</i>	
12.1 Introduction	261
12.2 Manufacturing Resource Modelling.....	262
12.2.1 Manufacturing Resource Representation Methodologies.....	263

12.2.2 Perspectives for Resource Modelling in the Context of Manufacturing	265
12.2.3 Modelling Approaches in the Context of Modelling Perspectives.....	267
12.3 A Modelling Framework for Technological Manufacturing Resources	268
12.3.1 CNC Machine Tools and Auxiliary Devices.....	269
12.3.2 Mechanical Elements, Electro-mechanical Elements and Electronic Elements	269
12.3.3 Kinematic Chains	270
12.4 The STEP-NC Compliant Schema for Representation of Machine Tools and Auxiliary Devices	270
12.4.1 Mechanical Machine Element	271
12.4.2 Kinematic Joint	271
12.4.3 Axes of Movement	273
12.4.4 Additional Entities Required for Resource Representation	273
12.5 Example Models.....	274
12.5.1 2-Axis Lathe.....	274
12.5.2 3-Axis Milling Centre	276
12.5.3 5-Axis Milling Centre	277
12.5.4 Parallel Kinematics Machine.....	278
12.6 Future Developments.....	279
12.7 Conclusion.....	280
Acknowledgment	280
References.....	280

13 Development of Digital Semantic Machining Models for STEP-NC Based on STEP Technology 283

F. Tanaka, M. Yamada, S. Mitsui, T. Kishinami, K. Akama, T. Kondo and M. Onosato

13.1 Introduction	283
13.2 Digital Semantic Machining Model	285
13.2.1 Basic Concepts of the Digital Semantic Machining Model.....	285
13.2.2 Modelling and Implementation of Digital Semantic Machining Models	286
13.3 Product Data Quality Assurance Method	287
13.3.1 Current Problems of Checking the Quality of Product Data	288
13.3.2 A Software for Checking the Quality of Product Data.....	289
13.3.3 Constituents of Proposed Method	290
13.3.4 Example of Checking Quality of Product Data	291
13.4 Machining Features for 3+2 Axis Machining.....	292
13.4.1 Concepts of 3+2 Axis Machining.....	293
13.4.2 Machining Feature in 3+2 Axis Machining.....	293
13.4.3 Extraction Method of 3+2 Axis Machining Features	295
13.4.4 Example	296
13.5 Machine Tools for ISO 14649 CNC Data Model	297
13.5.1 Background of Developing ISO 14649 Machine Tools	297

13.5.2 Machine Tool Model Based on STEP Kinematic Model	298
13.5.3 Prototype of 5-Axis Machine Tool for ISO 14649 CNC Data Model	300
13.5.4 Practical Results	301
13.6 Conclusions	302
Acknowledgment	303
References.....	303

14 Development of a STEP-NC Network Management Protocol for Decentralized Manufacturing 307

F. Calabrese and A. Buonanno

14.1 Introduction	307
14.2 Overview of STEP-NC.....	309
14.3 Decentralized Manufacturing Solution.....	310
14.3.1 STEP-NC Network Management Protocol	311
14.3.2 Details of the Components	313
14.3.3 Simplified and Hybrid Architectures	317
14.3.4 SNMP Compliant Controller.....	318
14.3.5 Interpreter.....	318
14.3.6 High-level Controller	318
14.3.7 Tool-path Generator	319
14.3.8 Low-level Controller.....	319
14.3.9 Machining Inspector.....	319
14.4 Application of the SNMP Architecture in a Real Scenario	319
14.4.1 Evaluation of the Performance of the System	324
14.5 Conclusion.....	327
References.....	328

15 A Generic Product Modelling Framework for Rapid Development of Customised Products 331

S. Q. Xie and W.L. Chen

15.1 Introduction	331
15.2 Product Modelling: A Review.....	333
15.3 Generic Product Information Framework.....	335
15.3.1 STEP-based Modelling Environment.....	335
15.3.2 'Five-phase' Modelling Methodology.....	338
15.3.3 EDM Data Exchange and Sharing Methods.....	339
15.4 EXPRESS Data Model	340
15.5 Case Study	342
15.5.1 Product and its Assembling Information.....	342
15.5.2 Tooling Information	343
15.5.3 Machine Tool Information	344
15.5.4 Manufacturing Information	345
15.6 STEP Compliant Product Data Management System.....	346
15.7 Conclusion and Future Work.....	348
Acknowledgment	349

Reference	350
16 STEP in the Context of Product Data Management.....	353
<i>V. Srinivasan</i>	
16.1 Introduction	353
16.2 Product Data and Metadata.....	355
16.2.1 Product Data.....	355
16.2.2 Product Metadata	357
16.3 STEP PDM Schema	360
16.4 OMG PLM Services.....	368
16.4.1 OMG's Model Driven Architecture	368
16.4.2 OMG PLM Services Architecture.....	369
16.5 Others to Watch.....	379
16.6 Concluding Remarks	379
Acknowledgment	380
References.....	380
17 STEP in the Context of PLM	383
<i>C. Mehta, L. Patil and D. Dutta</i>	
17.1 Introduction	383
17.2 Overview of Standards for PLM	385
17.2.1 EIA-649 National Consensus Standard for Configuration Management.....	386
17.2.2 ANSI/GEIA GEIA-859-2004 Data Management.....	386
17.2.3 ISO/IEC 12207 Software Life Cycle Processes	386
17.2.4 PLM-XML	386
17.2.5 ISO 10303-239 (STEP AP 239)	387
17.2.6 STEP-based Standards	388
17.3 Applying STEP to Data Exchange and Reuse in PLM.....	388
17.3.1 Engineering Change Management as a Typical PLM Activity	388
17.3.2 Requirements for Exchange and Reuse of ECM Data	389
17.3.3 Suitability of STEP for Exchange and Reuse of ECM Data	390
17.3.4 Enhancing EC Representation in STEP – Change Evaluation Model	391
17.3.5 Example Application of CEM.....	393
17.4 Further Issues and Directions	394
17.4.1 Conflicts Within the Standard	394
17.4.2 Abstract/Ambiguous Definitions.....	396
17.5 Concluding Remarks	396
Acknowledgment	397
References.....	397
18 Usage of Agent Technology to Coordinate Data Exchange in the Extended Enterprise	399
<i>O. López-Ortega and K. López de la Cruz</i>	

18.1 Introduction	399
18.2 Integrated EXPRESS Model	401
18.2.1 STEP-related Standards.....	401
18.2.2 Semantic Integration to Represent Core Capabilities.....	402
18.2.3 The Integrated EXPRESS Model.....	404
18.3 Model and Implementation of the Multi-agent System	405
18.3.1 Business Processes as Inspiration for Communication Protocols.....	405
18.3.2 Communication Protocols Among Agents to Support Data Exchange.....	406
18.3.3 Agent-oriented Programming.....	409
18.3.4 Exemplification of a Business Process Type.....	412
18.4 On the Networking of Enterprises	415
18.4.1 Multi-agent Systems on Distributed Design and Manufacturing.....	415
18.4.2 Covenants in the Extended Enterprise.....	415
18.5 Conclusions	416
References.....	416

19 An XML Implementation for Data Exchange of Heterogeneous Object Models 419

X.Y. Kou and S.T. Tan

19.1 Introduction	419
19.2 XML Technologies and ISO 10303.....	421
19.3 An XML Implementation for Data Exchange of Heterogeneous Object Models	422
19.3.1 Existing Heterogeneous Object Models	422
19.3.2 Representing Material Heterogeneity with XML.....	426
19.4 Implementations and a Case Study	433
19.5 Conclusions	436
Acknowledgment	436
References.....	436

20 Module-based Platform for Seamless Interoperable CAD-CAM-CNC Planning..... 439

C. Brecher, W. Lohse and M. Vitr

20.1 Challenges of Production Industries in High-wage Countries.....	439
20.2 Deficits in the Interoperability of Existing CAM Tools	441
20.2.1 CAM Tools in Today's Business Processes.....	442
20.2.2 Limits of Current CAM Systems.....	443
20.3 IT Platform for Open Computer-based Manufacturing	443
20.3.1 The Open Computer-based Manufacturing Approach	443
20.3.2 Application of the Platform for Open Computer-based Manufacturing.....	445
20.4 Design Concept for the Module-based Platform	446
20.4.1 System Architecture of openCBM	447

20.4.2 Service-oriented Architecture for the openCBM Platform.....	447
20.4.3 Interoperable Data Structures Based on STEP Standards	449
20.5 Use Cases for the Module-based Platform	451
20.5.1 CAx Framework for Process Planning.....	451
20.5.2 Process Data Acquisition and a Process Information Database	458
20.6 Conclusions	460
Acknowledgements.....	461
References.....	461
Appendix Software Tools for Using STEP	463
Index	471
