1 A Practical Introduction to Differential Scanning Calorimetry <i>Paul Gabbott</i>	1
1.1 Introduction	2
1.2 Principles of DSC and types of measurements made	2
1.2.1 A definition of DSC	2
1.2.2 Heat flow measurements	3
1.2.3 Specific heat (C_p)	3
1.2.4 Enthalpy	5
1.2.5 Derivative curves	5
1.3 Practical issues	6
1.3.1 Encapsulation	6
1.3.2 Temperature range	8
1.3.3 Scan rate	8
1.3.4 Sample size	10
1.3.5 Purge gas	10
1.3.6 Sub-ambient operation	11
1.3.7 General practical points	11
1.3.8 Preparing power compensation systems for use	11
1.4 Calibration	12
1.4.1 Why calibrate	12
1.4.2 When to calibrate	12
1.4.3 Checking performance	13
1.4.4 Parameters to be calibrated	13
1.4.5 Heat flow calibration	13
1.4.6 Temperature calibration	15
1.4.7 Temperature control (furnace) calibration	16
1.4.8 Choice of standards	16

1.4.9	Factors affecting calibration	16
1.4.10	Final comments	17
1.5	Interpretation of data	17
1.5.1	The instrumental transient	17
1.5.2	Melting	18
1.5.3	The glass transition	22
1.5.4	Factors affecting T_g	24
1.5.5	Calculating and assigning T_g	25
1.5.6	Enthalpic relaxation	26
1.5.7	T_g on cooling	30
1.5.8	Methods of obtaining amorphous material	31
1.5.9	Reactions	34
1.5.10	Guidelines for interpreting data	40
1.6	Oscillatory temperature profiles	42
1.6.1	Modulated temperature methods	42
1.6.2	Stepwise methods	44
1.7	DSC design	46
1.7.1	Power compensation DSC	46
1.7.2	Heat flux DSC	47
1.7.3	Differential thermal analysis DTA	48
1.7.4	Differential photocalorimetry DPC	48
1.7.5	High-pressure cells	49
	Appendix: standard DCS methods	49
	References	50

2.1	Introduction	52
2.2	Proof of performance	52
2.2.1	Effect of high scan rates on standards	52
2.2.2	Definition of HyperDSC™	54
2.2.3	The initial transient	54
2.2.4	Fast cooling rates	54
2.3	Benefits of fast scanning rates	57
2.3.1	Sensitivity	57
2.3.2	Measurement of sample properties without unwanted annealing effects	57
2.3.3	Separate overlapping events based on different kinetics	59
2.3.4	Speed of analysis	59
2.4	Application to polymers	61
2.4.1	Melting and crystallisation processes	61
2.4.2	Comparative studies	64
2.4.3	Forensic studies	65
2.4.4	Effect of heating rate on the sensitivity of the glass transition	67
2.4.5	Effect of heating rate on the temperature of the glass transition	68
2.4.6	Effect of heating rate on T_g of annealed materials (and enthalpic relaxation phenomena)	72

2.5	Application to pharmaceuticals	76
2.5.1	Purity of polymorphic form	76
2.5.2	Identifying polymorphs	78
2.5.3	Determination of amorphous content of materials	79
2.5.4	Measurements of solubility	81
2.6	Application to water-based solutions and the effect of moisture	82
2.6.1	Measurement of T_g in frozen solutions and suspensions	82
2.6.2	Material affected by moisture	83
2.7	Practical aspects of scanning at fast rates	83
2.7.1	Purge gas	83
2.7.2	Sample pans	84
2.7.3	Sample size	85
2.7.4	Scan rate	85
2.7.5	Instrumental settings	85
2.7.6	Cleanliness	85
2.7.7	Getting started	86
