Plate section between pages 838 and 839

PART 1	Basic strategy and introduction to pathology	1
1	Therapeutics: general strategy	3
	Terminology of disease	4
	Case history	8
	Drug disposition	13
	Drug selection	15
	References and further reading	22
2	Major pathological processes in disease	23
	Introduction	23
	Immunology	25
	Inflammation	46
	Ischaemia	58
	References and further reading	63
PART 2	Body systems and their principal diseases	65
3	Gastrointestinal and liver diseases	67
	Gastrointestinal anatomy and physiology	68
	Investigation	78
	Disorders of the upper gastrointestinal tract	82
	Oesophageal disorders	82

Helicobacter infection and gastroduodenal disease 88

Dyspepsia 91

Peptic ulcer disease 96

Nausea and vomiting 107

Problems of the small and large intestine 111

Malabsorption 111

Inflammatory bowel disease 114

Other colonic and rectal disorders 124

Stomatherapy 133

Liver diseases 138

Clinical physiology of the liver 138

Clinical features of hepatic disease 143

Gallstones (cholelithiasis) 150

Liver failure 152

Viral and other infective hepatitis 156

Drugs and the liver 159

References and further reading 162

4 Cardiovascular system

165

Physiological principles of the cardiovascular system 166

Clinical features of cardiovascular disease 182

Heart failure 186

Hypertension 208

Ischaemic heart disease 235

Atherosclerosis and vascular obstructive disease 235

Angina pectoris 249

Myocardial infarction 258

Acute coronary syndrome 266

Summary of cardiovascular aetiologies 269

References and further reading 270

5 Respiratory diseases

271

Anatomy and clinical physiology of the respiratory system 272

Clinical aspects of respiratory disease 281

Obstructive pulmonary disease 292

Asthma 292

Other allergic lung diseases 325

Chronic obstructive pulmonary disease 326

Restrictive lung disease 342

Diseases of the pulmonary circulation 342

Respiratory failure 346

Inhalation therapy 348

Oxygen therapy 360

References and further reading 364

6	Central nervous system	365
	Physiological principles 366	
	Psychiatric disorder 371	
	Clinical aspects of psychiatric disorder 371	
	Anxiety 374	
	Affective disorder: depression 385	
	Mania and manic-depressive disorder 403	
	Schizophrenia 408	
	Neurological disorder 426	
	Parkinson's disease and the extrapyramidal syndromes 426	
	Epilepsy 439	
	References and further reading 454	
 7	 Pain and its treatment	 455
	Introduction 456	
	Pathophysiology of pain 459	
	Principles of analgesic use 463	
	Analgesic drugs and techniques 468	
	Opioid analgesics 468	
	Less potent analgesics 478	
	Analgesic adjuvants 479	
	Other methods of pain control 482	
	Local anaesthetics 482	
	Topical agents 485	
	Physical methods 485	
	Techniques recruiting endogenous inhibitory mechanisms 485	
	Chemical nerve blocks 487	
	Neurosurgical approaches 488	
	Psychotherapy and hypnosis 489	
	Syringe drivers and patient-controlled analgesia 489	
	Some common pain situations 491	
	Headache, migraine and facial pain 491	
	Post-herpetic neuralgia 505	
	Some special pain situations 506	
	References and further reading 511	
 8	 Infections and antimicrobial therapy	 513
	Introduction 514	
	Classification of microorganisms 514	
	Classification and properties of antimicrobials 517	
	Penicillins 518	
	Cephalosporins 521	
	Aminoglycosides 523	
	Other antimicrobial agents 525	
	Antifungal agents 532	

	Antiviral agents	534
	Therapeutic decisions in antimicrobial therapy	536
	Some important infections	548
	References and further reading	578
9	Endocrine system	581
	Diabetes mellitus	582
	Physiological principles of glucose and insulin metabolism	582
	Epidemiology and classification	587
	Aetiology and pathogenesis	589
	Natural history	591
	Clinical features	593
	Complications	593
	Management	604
	Monitoring	628
	Thyroid disease	630
	Physiological principles	630
	Hypothyroidism	633
	Hyperthyroidism	637
	References and further reading	643
10	Neoplastic disease	645
	Classification and epidemiology of cancer	646
	Aetiology	649
	Pathobiology	653
	Cytokinetics	657
	Clinical features	668
	Investigation and diagnosis	671
	Management: aims and strategy	673
	Cytotoxic chemotherapy	677
	Endocrine therapy	693
	Other pharmacotherapy	695
	Rational design of antineoplastic regimens	701
	References and further reading	704
11	Haematology	705
	Red blood cell production and function	705
	Anaemia	710
	Neutropenia and agranulocytosis	725
	Haemostasis, fibrinolysis and anticoagulation	726
	References and further reading	741
12	Rheumatology: musculoskeletal and connective tissue diseases	743
	Introduction	744
	Anatomy and physiological principles of the musculoskeletal system	744

The immune system and rheumatic diseases	748
Examination, investigation and assessment	750
Principal arthritic diseases	754
Osteoarthritis	754
Rheumatoid arthritis	761
Seronegative spondarthritides	789
Ankylosing spondylitis	789
Crystal deposition arthropathies	791
Common features and pathology	791
Gout	792
Pyrophosphate arthropathy	798
Autoimmune connective tissue disorders	798
Systemic lupus erythematosus	798
Sjögren's syndrome (keratoconjunctivitis sicca)	801
Systemic sclerosis and scleroderma	803
Raynaud's syndrome	804
Vasculitides	805
Other multisystem diseases	807
Other rheumatic disorders	809
Reactive arthritis	809
Soft tissue rheumatism	809
References and further reading	813

13	Skin diseases	815
	Skin anatomy and physiology	816
	Clinical features of skin diseases	819
	General management of skin diseases	827
	Psoriasis	838
	Eczema and dermatitis	849
	Acne	856
	Rosacea	863
	Urticaria	864
	Drug-induced skin disease	866
	The skin as a route for systemic drug delivery	867
	References and further reading	867
14	Renal system	869
	Physiological principles of the renal system	869
	Clinical features and investigation of renal disease	882
	Renal failure	897
	Renal replacement therapy	916
	Important renal diseases	929
	References and further reading	942
	Index	943
