

ARCHAEA

new models for prokaryotic biology

edited by Paul Blum

Caister Academic Press

Contents

	List of contributors	iv
	Preface	vii
1	Respiratory Pathways in Archaea Imke Schröder and Simon de Vries	1
2	Archaea–Metal Interactions: Metabolism and Strategies of Resistance Elisabetta Bini	27
3	Redox Enzymes in the Archaea Edward J. Crane III, Charles S. Hummel and Evan T. Hall	45
4	Pentose Metabolism in Archaea Harmen J.G. van de Werken, Stan J.J. Brouns and John van der Oost	71
5	DNA Replication in Archaea Brian R. Berquist and Shiladitya DasSarma	95
6	Recombination Processes and Proteins in the Archaea Michael L. Rolfmeier and Cynthia A. Haseltine	121
7	DNA Repair and DNA Damage Tolerance in Archaeal Bacteria: Extreme Environments and Genome Integrity Takehiko Nohmi, Masami Yamada and Petr Gruz	147
8	Modified Nucleotides in Archaeal RNAs Henri Grosjean, Ramesh Gupta, and E. Stuart Maxwell	171
9	Signal Transduction in the Archaea Peter J. Kennelly	197
10	Functional Genomics of Stress Response in Extremophilic Archaea Sabrina Tachdjian, Keith R. Shockley, Shannon B. Connors, and Robert M. Kelly	219
11	Archaeal Antimicrobials: An Undiscovered Country Richard F. Shand and Kathryn J. Leyva	233
	Index	245
