

WANDA M. HASCHEK COLIN G. ROUSSEAUX MATTHEW A. WALLIG

FUNDAMENTALS OF
**TOXICOLOGIC
PATHOLOGY**

SECOND EDITION

Contents

Preface	xix
Acknowledgments	xxi
CHAPTER 1 PRINCIPLES OF TOXICOLOGY	1
The Effect of the Body on the Chemical	1
Absorption	1
Passage across Membranes	1
Distribution	2
Volume of Distribution	2
Barriers to Distribution	2
Biotransformation	3
Phase I Metabolism	3
Phase II Metabolism	4
Enzyme Location in Toxicity	4
Excretion	5
Urinary Excretion	5
Biliary Excretion	5
Pulmonary Excretion	6
Interaction of Chemical and the Body	6
Enzyme Induction and Inhibition	6
Activation, Induction, or Synergism	6
Inhibition	6
Dose Dependency and Site of Action	7
Organ Specificity for Toxicity	7
Site-Specific Interactions and Toxicity	7
Receptors and Enzymes	7
Direct and Cascade Effects	7
Nonspecific Interactions and Toxicity	7
Electrophiles and Covalent Binding	7
Further Reading	8
CHAPTER 2 MANIFESTATIONS OF TOXIC CELL INJURY: CELL INJURY/DEATH AND CHEMICAL CARCINOGENESIS	9
Section I Cell Injury, Cell Death and Sequelae	10
Introduction	10
Key Cellular Components in Cell Injury	10
Factors Influencing Injury	10
Reaction of the Body to Injury	11
Adaptation	11
Reversible Cell Injury	13
Cell Swelling	13

Fatty Change	14
Irreversible Injury	15
Oncotic Necrosis	15
Apoptotic Necrosis	19
Sequelae to Irreversible Cell Injury	21
Concluding Comments	23
Section II Chemical Carcinogenesis	23
Overview	23
Nomenclature of Neoplasms	24
Spectrum of Proliferative Lesions	25
Quantitative Cell Proliferation (Hyperplasia)	25
Qualitative Cell Proliferation	26
Preneoplasia	27
Neoplastic Cell Proliferation	27
Diagnostic Distinction between Preneoplasia, Benign Neoplasia, and Malignant Neoplasia	28
Steps in the Neoplastic Process	28
Initiation	28
Promotion	29
Progression	29
Hypotheses of Mode of Action of Chemical Carcinogens	30
Overview	30
Mutational Genetic Hypothesis of Chemical Carcinogenesis	30
Nonmutational Genetic Hypothesis of Chemical Carcinogenesis	31
Epigenetic Hypothesis of Chemical Carcinogenesis	31
Viral Hypothesis of Carcinogenesis	32
Oncogenes and Tumor Suppressor Genes in Chemical Carcinogenesis	33
Genes and Oncogenes	33
Proto-oncogene Function	33
Proto-oncogene Activation	33
Oncogene Activation in Chemical Carcinogenesis	34
Tumor Suppressor Genes and Carcinogenesis	36
Cell Cycle and Carcinogenesis	36
Cyclins and Cdk Proteins	36
Retinoblastoma Checkpoint	36
p53 Checkpoint	37
Tests for Carcinogenic Potential of Chemicals	37
<i>In Vivo</i> Chronic Rodent Carcinogenesis Studies	37
Additional <i>In Vivo</i> Tests for Carcinogenicity	39
<i>In Vitro</i> Short-term Tests	41
Conclusion	41
Further Reading	41

CHAPTER 3 CLINICAL PATHOLOGY 43

Introduction	43
Hematology	44
Parameters Generally Included in Study Protocols	44
Interpretative Hematology	45
Clinical Chemistry	50
Cholesterol, Triglycerides, and Glucose	50
Serum Proteins	53
Indicators of Hepatic Integrity and Function	54
Indicators of Renal Function	56

Electrolytes	56
Calcium and Inorganic Phosphate	57
Enzymes of Muscle Origin	57
Microsomal Enzyme Induction	57
Urinalysis	58
Interpretation of Clinical Pathology Results	59
Potential Effects of Factors Unrelated to Test Article Treatment	60
Comparators: Concurrent Controls, Reference Ranges	61
Statistical Analyses	62
Direct Versus Indirect Effects	62
Pharmacologic Versus Toxic Effects	63
Biological Importance of Treatment-related Effects	63
Reporting of Clinical Pathology Findings	64
Summary	64
Further Reading	64

CHAPTER 4 NOMENCLATURE: TERMINOLOGY FOR MORPHOLOGIC ALTERATIONS 67

Introduction	67
Basic Terminology	68
Terminology Issues	68
Training	73
Multiple Pathologists	74
Diagnostic Drift	75
Lesion Complexity	75
Standardized Nomenclature	76
Recording Pathology Data	76
Suggested Practices	77
Summary	78
Further Reading	79

CHAPTER 5 TECHNIQUES IN TOXICOLOGIC PATHOLOGY 81

Introduction	81
Factors Influencing Evaluation of Altered Morphology	82
Factors in Collection and Processing of Tissue	84
Factors Intrinsic to the Animal	87
Factors Related to the Environment	90
Factors Related to Nomenclature	91
Further Reading	91

CHAPTER 6 RESPIRATORY SYSTEM 93

Introduction	93
Structure and Cell Biology	94
Macroscopic and Microscopic Anatomy	94
Physiology and Functional Considerations	100
Xenobiotic Exposure, Metabolism, and Excretion	102
Mechanisms of Toxicity	104
Direct Toxicity	105
Metabolic Activation	105

Immune-mediated Toxicity	106
Toxicity and Responses to Inhaled Particles	108
Xenobiotic Interactions	109
Modifying Factors in Toxicity	109
Response to Injury	109
Injury, Regeneration, and Repair	110
Nasopharyngeal and Laryngeal Responses to Injury	111
Airway Response to Injury	113
Pulmonary Parenchymal Response to Injury	118
Edema	119
Inflammation	121
Fibrosis	124
Emphysema	126
Neoplasia	127
Evaluation of Toxicity	128
Methods for Testing	129
Pulmonary Function	130
Bronchopulmonary Lavage	130
Biochemical Evaluation	131
Morphologic Evaluation	131
Conclusions	133
Further Reading	133

CHAPTER 7 SKIN AND ORAL MUCOSA 135

Section I Skin	135
Introduction	135
Structure and Function of Skin	136
Microscopic Anatomy	136
Skin Cell Subpopulations	138
Physiology and Biochemistry	138
Comparative Mechanisms of Cutaneous Toxicity	141
Direct Damage	141
Immunomediated Cutaneous Toxicity	144
Phototoxicity and Photoallergy	146
Response of Skin to Injury	147
Fundamental Non-neoplastic Lesions	147
Neoplastic Lesions	155
Evaluation of Cutaneous Toxicity	156
Skin Irritation Tests	157
Carcinogenesis Bioassays	157
Morphologic Assessment	158
Other Bioassays	158
Transgenic Animal Models	158
<i>In Vitro</i> Testing	159
Section II Oral Mucosa	159
Introduction	159
Structure and Function of the Oral Mucosa	159
Microscopic Anatomy	159
Physiology	159
Comparative Mechanisms of Mucosal Toxicity	160
Response of Oral Mucosa to Injury	160
Fundamental Non-neoplastic Lesions	160

Carcinogenesis	161
Evaluation of Oral Toxicity	161
Further Reading	161

CHAPTER 8 GASTROINTESTINAL TRACT 163

Introduction	163
Structure and Function of the Gastrointestinal Tract	164
Macroscopic and Microscopic Structure and Function	164
Enteric Lymphoid System	171
Enteric Nervous System	172
Biotransformation	172
Bacterial Metabolism	174
Enterohepatic Circulation	174
Comparative Mechanisms of Gastrointestinal Toxicity	175
Intestinal Barrier Function	175
Intestinal Malabsorption	177
Altered Blood Supply	177
Mucosal Barrier Damage and Cytotoxicity	178
Hypersensitivity	181
Neurotransmitter Effects	183
Perturbation of Microflora	183
Carcinogenicity	183
Response of the Gastrointestinal Tract to Injury	184
Pathophysiological Responses	184
Inflammatory Response	186
Mucosal Response	187
Organ-specific Responses	189
Evaluation of Gastrointestinal Toxicity	191
<i>In Vitro</i> Strategies	191
<i>In Vivo</i> Strategies	192
Molecular Pathology	192
Morphologic Methods	193
Animal Models	194
Further Reading	196

CHAPTER 9 THE LIVER 197

Introduction	197
Structure and Function	197
Gross and Microscopic Anatomy	198
Cell Components	198
Xenobiotic Metabolism	200
Mechanisms of Toxicity	200
Classification of Hepatotoxicants	201
Cellular Mechanisms of Toxicity	201
Non-neoplastic Responses to Injury	202
Histologic Types of Hepatic Necrosis	208
Intracellular Accumulations	214
Pathology of Transcription and Translation	218
Cholestasis	219
Hepatocellular Adaptive Responses	219

Hepatocellular Proliferation	220
Bile Ductular Lesions	221
Nonparenchymal Cell Toxicity	224
Hepatitis	225
Hepatic Fibrosis and Cirrhosis	226
Hepatic Neoplasia	228
Hepatocellular Neoplasia	228
Bile Duct Neoplasms	230
Endothelial Neoplasms	231
Küpfner Cell Neoplasms	231
Evaluation of Toxicity	231
Morphologic Evaluation	232
Clinical Chemistry Evaluation	233
Noninvasive Imaging	234
<i>In Vitro</i> Approaches	234
Use of Animals as Models	234
Summary and Conclusions	235
Further Reading	235

CHAPTER 10 PANCREAS 237

Section I Exocrine Pancreas	237
Introduction	237
Normal Structure of Exocrine Pancreas	238
Gross Anatomy	238
Microscopic Anatomy and Ultrastructure	238
Physiology of Exocrine Pancreas	240
Comparative Mechanisms of Exocrine Pancreatic Toxicity	241
Response of Exocrine Pancreas to Injury	243
Cytotoxic Effects on Acinar Cells	243
Cytotoxic Effects in Ductal and Centroacinar Cells	247
Carcinogenesis	247
Evaluation of Exocrine Pancreatic Toxicity	248
Methods of Testing	249
Morphologic Evaluation of Toxicity	250
Animal Models	250
Summary and Conclusions	250
Section II Endocrine Pancreas	251
Structure of Endocrine Pancreas	251
Gross Anatomy	251
Microscopic Anatomy and Ultrastructure	251
Physiology of Endocrine Pancreas	252
Mechanisms of Endocrine Pancreatic Toxicity	253
Insulin-dependent Diabetes Mellitus	253
Non-insulin-dependent Diabetes Mellitus	254
Glucose Intolerance	255
Response of Endocrine Pancreas to Injury	256
Apoptosis	256
Necrosis	256
Insulinitis	257
Regeneration	258
Carcinogenesis	258
Evaluation of Endocrine Pancreatic Toxicity	258

<i>In Vivo</i> Testing	258
<i>In Vitro</i> Testing	258
Animal Models	258
Summary and Conclusions	258
Further Reading	259

CHAPTER 11 KIDNEY AND LOWER URINARY TRACT 261

Introduction	261
Renal Structure and Function	262
Gross, Microscopic, and Ultrastructural Anatomy	262
Physiology	269
Mechanisms of Toxicity	273
Overview and Classification	273
Glomerular Injury	275
Proximal Tubular Injury	284
Other Sites of Renal Injury	296
Lower Urinary Tract	299
Renal Carcinogenesis	300
Lower Urinary Tract Carcinogenesis	303
Response to Injury	303
Introduction	303
Glomerulus	303
Proximal Tubule and Interstitium	304
Renal Papillary Necrosis	309
Renal Tubular Hyperplasia and Neoplasia	309
Lower Urinary Tract: Non-neoplastic Lesions	310
Lower Urinary Tract Epithelial Neoplasms	313
Evaluation of Toxicity	314
Diagnostic Evaluation of Renal Disease	314
Routine Screening for Nephrotoxicity	314
Special Techniques	315
Evaluation of the Lower Urinary Tract	316
Conclusion	317
Further Reading	317

CHAPTER 12 CARDIOVASCULAR AND SKELETAL MUSCLE SYSTEMS 319

Section I Heart	320
Introduction	320
Structure and Function	320
Gross and Microscopic Anatomy	320
Cellular and Extracellular Elements of the Heart: Biology and Clinical Relevance	321
Physiology and Functional Considerations	323
Xenobiotic Exposure	324
Mechanisms of Toxicity	324
Physiological Mechanisms of Functional Alterations	324
Biochemical Mechanisms of Cardiotoxicosis	328
Cardiotoxicoses Due to Direct Cellular Injury	329
Cardiotoxicoses Due to Indirect Acting Injury	329

Organellar Localization of Injury	330
Xenobiotic Interactions	331
Response to Injury	331
Developmental Cardiotoxicities	334
Myocardium	335
Endocardium	346
Pericardium	346
Valves	346
Evaluation of Cardiotoxicity	346
Physiologic Evaluation of Toxicity	347
Morphologic Evaluation of Toxicity	349
Biochemical Evaluation of Toxicity	351
Use of Animals as Models	351
Section II Vessels	351
Introduction	351
Structure and Function	352
Microscopic Anatomy	352
Physiology and Functional Considerations	352
Mechanisms of Toxicity	355
Vasculotoxic Effects of Xenobiotics	355
Vascular Toxicity in Specific Organs	356
Response to Injury	357
Regeneration and Repair	358
Vessel Alterations	358
Evaluation of Vasotoxic Effects	363
Physiologic Methods for Testing	363
Morphologic Evaluation	364
Use of Animals as Models	364
Section III Skeletal Muscle	365
Introduction	365
Structure and Function	365
Gross and Microscopic Anatomy	365
Cells of Skeletal Muscle: Biology and Clinical Relevance	365
Physiologic and Functional Considerations	367
Mechanisms of Toxicity	367
Altered Neurogenic Function	367
Altered Immunologic Function	368
Localized Damage	368
Cell Membrane Alterations	368
Sarcoplasmic Reticulum Alterations	369
Microtubular Alterations	369
Myofilament Alterations	369
Lysosomal Alterations	369
Altered Intracellular Calcium Concentration	369
Altered Protein Synthesis	369
Altered Muscle Cell Differentiation	370
Response to Injury	370
Injury, Regeneration, and Repair	370
Skeletal Muscle Alterations	371
Evaluation of Skeletal Muscle Toxicity	373
Methods for Testing	374
Morphologic Evaluation	374
Use of Animals as Models	376
Further Reading	376

CHAPTER 13 NERVOUS SYSTEM

377

Introduction	377
Structure and Function	378
Macroscopic Structure	378
Microscopic Anatomy	379
Specialized Anatomical Features	381
Select Functions and Neurotoxicity	382
Mechanisms of Disease and Classification of Neurotoxic Diseases	387
Neuronopathies	387
Axonopathies	396
Myelinopathies	398
Toxicants Affecting Vascular Integrity	400
Developmental Neurotoxicants	404
Neurocarcinogens	405
Evaluation of Neurotoxicity	405
Use of Animals as Models	405
Tests of Nervous System Function	405
Morphologic Evaluation	406
<i>In Vitro</i> Systems	409
Conclusions	409
Further Reading	410

CHAPTER 14 BONES AND JOINTS

411

Introduction	411
Skeletal Structure and Composition	412
Formation and Development	412
Composition of Bone	416
Species Differences in Composition and Changes with Age	416
Bone Physiology and Function	417
Modeling and Remodeling of Bone	417
Biomechanics	417
Mineral Homeostasis	418
Regulation of Bone Cell Function	418
Mechanisms of Toxicity	420
Bone Toxicity	420
Joint Toxicity	426
Response of the Skeleton to Toxic Injury	428
Bone	428
Joints	438
Evaluation of Skeletal Toxicity	442
Testing for Skeletal Toxicity	442
Morphologic Evaluation	443
Biochemical Evaluation	447
Animal Models of Skeletal Disease	448
Summary	448
Further Reading	449

CHAPTER 15 IMMUNE SYSTEM

451

Introduction	451
Function and Structure of the Immune System	451

Function of the Immune System	451
Structure of the Immune System	456
Comparative Mechanisms of Immune Toxicity	467
Introduction	467
Examples of Immunotoxic Agents	468
Response of the Immune System to Toxic Injury	477
Decreased Cellularity	478
Increased Cellularity	484
Neoplasia	484
Inflammation in Nonlymphoid Tissues	485
Testing for Immunotoxicity	486
<i>In Vivo</i> and <i>In Vitro</i> Approaches	486
Morphologic Techniques	487
Animal Models	488
Summary	489
Further Reading	489

CHAPTER 16 HEMATOPOIETIC SYSTEM 491

Introduction	491
Phylogeny	491
Ontogeny	492
Structure and Function	492
Gross and Microscopic Anatomy	492
Hematopoiesis	494
Cellular Kinetics	495
Comparative Mechanisms of Toxicity	496
Idiosyncratic Reactions	496
Direct Damage	499
Myelotoxicity	501
Responses of Hematopoietic Tissues to Toxic Injury	503
Changes in Blood	503
Changes in Bone Marrow	505
Hematopoietic Assessment	510
Summary	512
Further Reading	512

CHAPTER 17 ENDOCRINE SYSTEM 513

Introduction	513
Adrenal Cortex	513
Structure and Function	513
Mechanisms of Toxicity	516
Response to Injury	516
Evaluation of Toxicity	523
Adrenal Medulla	523
Structure and Function	523
Mechanisms of Toxicity	523
Response to Injury	523
Evaluation of Toxicity	525
Pituitary Gland	525
Structure and Function	525
Mechanisms of Toxicity	527
Response to Injury	527

Evaluation of Toxicity	530
Thyroid C-cells	530
Structure and Function	530
Mechanisms of Toxicity	531
Response to Injury	531
Thyroid Follicular Cells	532
Structure and Function	532
Mechanisms of Toxicity	536
Response to Injury	538
Evaluation of Toxicity	543
Parathyroid Gland	543
Introduction	543
Structure and Function	544
Mechanisms of Toxicity	546
Response of Parathyroid Chief Cells to Injury	547
Evaluation of Toxicity	550
Further Reading	550

CHAPTER 18 MALE REPRODUCTIVE SYSTEM 553

Introduction	553
Structure and Cell Biology	554
Embryological Derivation of the Reproductive Tract	554
Structure of the Testes	554
Physiology and Functional Considerations of the Testis	558
Structure and Function of the Epididymis and Excurrent Ducts	566
Structure and Function of Accessory Sex Organs	568
Penis and Ejaculation	569
Mechanisms of Toxicity	569
Role of Metabolism	570
Cell-specific Toxicity in the Testis	571
Vascular Effects and Indirect Toxicity to the Testis	573
Epididymal and Sperm Toxicity	575
Secondary Sex Organs	576
Hormone Disruption	576
Toxicity to the Developing Reproductive Tract	577
Responses to Injury	579
Disruption of Spermatogenesis	580
Tubular Dilatation and Tubular Shrinkage	583
Tubular and Testicular Necrosis	583
Leydig Cell Response	585
Disruption of Sperm Maturation	585
Epididymal Response	586
Response to Alterations in Hormone Balance	586
Reversibility	589
Reproductive Toxicity in Domestic Animals	590
Evaluation of Toxicity	593
Detecting Toxicity	593
Characterization of Reproductive Toxicity	593
Functional Characterization	595
Testing for Toxicity of the Developing Reproductive Tract	596
Conclusions	596
Further Reading	597

CHAPTER 19 FEMALE REPRODUCTIVE SYSTEM

599

Introduction	599
Structure and Functional Physiology	600
Structure	600
Functional Physiology	606
Mechanisms of Toxicity	609
General Toxicity	609
Ovary, Uterus, and Vagina as a Unit	609
Local Vaginal Toxicity	613
Carcinogenesis	613
Response to Injury	615
General Responses: Ovary, Uterus, and Vagina as a Unit	615
Local Vaginal Responses	620
Reproductive Toxicity in Domestic Animals	622
Neoplasia	625
Testing for Toxicity	628
General Toxicity	628
Local Vaginal Toxicity	630
Summary	630
Further Reading	630

CHAPTER 20 DEVELOPMENTAL PATHOLOGY

633

Introduction	633
Overview of Fetal Toxicologic Pathology	633
Basic Principles of Developmental Toxicology	634
Incidence of Congenital Anomalies	634
Normal Morphologic Development	634
Fertilization and Blastocyst Formation	635
Gastrulation	635
Organogenesis	635
Histogenesis and Functional Maturation	637
Mechanisms of Toxicity	638
Critical Phases of Intrauterine Development	638
Modifying Factors	639
Response to Injury	642
Death	642
Malformations	643
Intrauterine Growth Retardation	646
Perinatal Toxicology	646
Endocrine Disruption	647
Congenital Neoplasia	647
How Dose Relates to Manifestation of Abnormal Development	648
Selected Malformations	648
Central Nervous System	648
Craniofacial Structures	653
Cardiovascular System	655
Respiratory System	656
Gastrointestinal System	656
Urinary System	656
Reproductive System	657
Skeletal System	658

Developmental Toxicity Testing and Risk Assessment	660
Hazard Identification and Dose-response Analysis	660
Dose-Response Evaluation	664
Field Investigation of Anomalies in Domestic Animals	665
Defining the Individual Incident	665
Defining the Prevalence	666
Defining the Maternal Environment	666
Genetic Analysis	667
Environmental Analysis: An Epidemiological Approach	667
Further Reading	668
Glossary	669
Index	673
