I. INTRODUCTION

1. Nanomaterials - Definition and Methods of Preparation	1.1 - 1.8
1.1 Definition of Nanomaterials and Nanotechnology	1.1
1.2 Size Dependent Properties of Nanomaterials	1.3
1.3 Alternate Approaches for the Preparation of Nanomaterials	1.3
1.4 Synthetic Strategies	1.5
1.4.1 Gas Phase Evaporation Method	1.5
1.4.2 Matrix Isolation Technique	1.5
1.4.3 Metal Vapour-colvent Codeposition Method	1.5
1.4.4 Sol Gel Processing	1.5
1.5 Surface Versus Bulk Species	1.7
2. Properties of Nanomaterials	2.1 - 2.11
2.1 Introduction	2.1
2.1.1 Formation of Dangling Bonds	2.2
2.1.2 Atom Like Behavior of Nanoparticles	2.3
2.2 Physicochemical Properties	2.3
2.3 Optical Properties of Nanomaterials	2.4
2.3.1 Semiconductor Nanoparticles	2.5
2.3.2 Metal Nanoparticles	2.6
2.4 Electrical and Electronic Properties	2.7
2.4.1 Electronic Properties of Carbon Nanotubes	2.7
2.5 Redox Properties	2.7
2.5.1 Semiconductor Nanoparticles	2.8

2.6	Mechanical Properties	2.9
2.7	Magnetic Properties	2.9
2.7.1	Magnetic Properties of Fe ₂ O ₃ Nanoparticles	2.10
2.8	Catalytic Activity	2.10
	<i>References</i>	<i>2.11</i>

II. SECTORS INFLUENCED BY NANOMATERIALS

3. Health		3.1 - 3.11
3.1	Introduction	3.1
3.2	Food	3.1
3.3	Diagnosis	3.2
3.3.1	Fluorescent NP for Biosensors and Biolabelling	3.2
3.3.2	Quantum Dots (QDs)	3.3
3.3.3	Magnetic Nanoparticles	3.4
3.3.4	Devices Based on Nanotechnology for Diagnosis	3.5
3.4	Nanomaterials as Therapeutic Agents	3.7
3.4.1	Drug Delivery	3.7
3.4.2	Nanoparticles	3.7
3.4.3	Liposomes	3.8
3.4.4	Dendrimers	3.8
3.5	Thermal Ablation of Cells using Nanoparticles	3.8
3.5.1	Nanoshells	3.8
3.5.2	Carbon Nanotubes (CNT) and Fullerenes	3.9
3.6	Eye	3.9
3.7	Gene Therapy	3.10
3.8	Antimicrobial Activity and Wound Healing	3.10
3.9	Tissue Engineering	3.10
3.10	Artificial Implants	3.10
3.11	Cosmetics	3.11
	<i>References</i>	<i>3.11</i>
4. Communication Sector		4.1 - 4.13
4.1	Introduction	4.1
4.2	Electronic Communication and Informatics	4.1
4.3	Quantum Information Processing	4.2
4.4	Optical Communication	4.3
4.5	In Vivo Communication-nano Acoustic Messaging and DNA Analysis	4.4
4.6	Communication in Bacteria	4.4
4.7	Satellite Communication	4.5
4.8	Communication: Means and Devices in Nano Regime	4.5
4.8.1	Nano/Micro Electro Mechanical Systems	4.5

4.8.2	High Frequency Communication Devices	4.9	
4.8.3	Semiconductor Lasers	4.9	
4.8.4	Photonic Crystals and Photonic Integrated Circuits	4.10	
4.8.5	Light Emitting Diode Materials	4.10	
4.8.6	Carbon Nanotube Emitters	4.11	
4.8.7	Wireless Communication	4.11	
4.8.8	Molecular Switches for Communication Sector	4.11	
4.8.9	Lithography	4.12	
4.9	Conclusions		4.13
	<i>References</i>		4.13
5.	Energy		5.1 - 5.21
5.1	Introduction		5.1
5.2	Applications of Nanomaterials in Energy Sector		5.1
5.2.1	Solar Cells (Photovoltaics)	5.1	
5.3	Nanomaterials for Hydrogen Production and Conversion		5.4
5.3.1	Photo Electrochemical Decomposition of Water	5.6	
5.3.2	Fuel Cells	5.8	
5.4	Thermoelectrics and Piezoelectrics		5.12
5.4.1	Thermoelectrics	5.12	
5.4.2	Piezoelectrics	5.13	
5.5	Nanomaterials in Energy Storage		5.14
5.5.1	Rechargeable Batteries	5.14	
5.5.2	Supercapacitors	5.16	
5.5.3	Hydrogen Storage	5.18	
5.6	Summary		5.20
	<i>References</i>		5.20
6.	Environment		6.1 - 6.16
6.1	Introduction		6.1
6.1.1	Pollution Abatement	6.2	
6.1.2	Sensors	6.2	
6.1.3	Green Nanotechnology (manufacturing)	6.2	
6.2	Nanomaterials for Pollution Abatement		6.2
6.2.1	Membrane-based Nano-structured Metals for Reductive Degradation of Hazardous Organics at Room Temperature	6.2	
6.2.2	Simultaneous Environmental Monitoring and Purification through Smart Particles	6.3	
6.2.3	Nanoscale Biopolymers with Customizable Properties for Heavy Metal Remediation	6.3	
6.2.4	Dendrimers for Heavy Metal Removal	6.4	
6.2.5	Nanomaterials for Photocatalytic Decontamination	6.5	

6.2.6	Magnetic Nanoparticles for Metal Removal	6.6	
6.2.7	Nanotubes as Adsorbent Materials	6.6	
6.2.8	Zeolite Nanoparticles for Remediation Applications	6.6	
6.2.9	NO _x Reduction with Transition Metal Carbide Nanoparticles	6.7	
6.2.10	Nanocrystalline Ceramic Based Membrane Filtration for Drinking Water Treatment	6.8	
6.2.11	Nanoparticles for Hydrodehalogenation of Chlorinated Organic Contaminants	6.8	
6.3	Nanomaterials in Environmental Sensors		6.9
6.3.1	Sensing Based on Variation in Resistance	6.9	
6.3.2	Sensing Based on Surface Plasmon Resonance (SPR)	6.10	
6.3.3	Sensing Based on Forster Resonance Energy Transfer Effect (FRET)	6.10	
6.4	Nanomaterials for Green Manufacturing		6.10
6.4.1	Nanotechnology and Nanomaterials for Reducing Pollution during Production and Use	6.11	
6.4.2	Nanomaterials as Catalyst in Green Manufacturing	6.15	
6.5	Concluding Remarks		6.15
	<i>References</i>		6.16

7. Safety, Security and Defence 7.1 - 7.18

7.1	Introduction		7.1
7.2	Barcoding		7.1
7.2.1	Encoding Nanoparticles Embedded on a Host of Microparticles	7.2	
7.2.2	Encoding of Freestanding Nanoparticles	7.3	
7.3	Chemical and Biological Warfare Agents		7.5
7.3.1	Classification of Chemical and Biological Agents	7.6	
7.3.2	Detection of Warfare Agents	7.7	
7.3.3	Protective Measures against Chemical and Biological Agents	7.9	
7.3.4	Decontamination of Chemical and Biological Agents	7.11	
7.3.5	Protection and Decontamination through Nanomaterials	7.11	
7.4	Military		7.13
7.4.1	Military Armour	7.13	
7.4.2	Inorganic Fullerenes (IF)	7.13	
7.4.3	High Energy Density Batteries	7.14	
7.4.4	High Power Magnets in Submarines	7.14	
7.4.5	Stealthy Aircrafts	7.14	
7.4.6	Stealthy by Gold Nanofilm	7.15	
7.5	Satellites		7.15
7.5.1	Structural Materials	7.15	
7.5.2	Thermal Management Materials	7.16	
7.5.3	Increased Propellants Efficiency by Nanoparticles	7.16	
7.5.4	CNT in Communication Satellite	7.16	

7.5.5	IR Sensors	7.17	
7.5.6	Thermoelectrics	7.17	
7.5.7	Solar Cells	7.17	
7.5.8	Nanocrystalline Onboard Ignitor	7.17	
7.6	Summary		7.18
	<i>References</i>		7.18

III. SPECIAL APPLICATIONS OF NANOMATERIALS

8. Sensors Based on Nanomaterials			8.1 - 8.11
8.1	Introduction		8.1
8.2	Detecting Ionic Species		8.3
8.3	Detecting Neutral Species		8.5
8.5	Conclusion		8.11
	<i>References</i>		8.11
9. Nanomaterials in Energy Storage			9.1 - 9.19
9.1	Introduction		9.1
9.2	Fabrication of Electrodeposited Nanowires for Magneto Resistive Devices		9.3
9.3	Nanomaterials for Next Generation Energy Storage and Conversion Devices		9.7
	9.3.1 Nanomaterials in Secondary Battery Research and Development	9.7	
	9.3.2 Electrodes	9.9	
	9.3.3 Anodes	9.9	
	9.3.4 Cathodes	9.12	
9.4	Nanomaterials as Electrocatalysts for Fuel Cell Applications		9.14
	9.4.1 Why Should Nanoscience be Beneficial to Fuel Cells?	9.14	
	9.4.2 How are Nanomaterials Used in Fuel Cells and Energy Conversion?	9.15	
9.5	Nanostructured Electrodes for Electrochemical Supercapacitors		9.16
9.6	Conclusions		9.19
	<i>References</i>		9.19

IV. ADVANCED NANOMATERIALS

10. Silicon Substitutes			10.1 - 10.15
10.1	Introduction		10.1
	10.1.1 General Introduction to Silicon and its Application	10.1	
10.2	Why to Replace Silicon and Silicon Based Components?		10.4
	10.2.1 What Can Replace the Silicon?	10.5	
10.3	Substitutes to Silicon		10.5
10.4	Si Versus C: What are the Differences?		10.6

10.5	Structural Characteristics, Processing and Applications of CNTs	10.7
10.6	Carbon Nanotube Growth and Device Fabrication	10.8
10.6.1	Carbon Nanotube Transistors and Circuits	10.8
10.7	Challenges and Future Prospects	10.12
10.8	Other Silicon Substitute Materials	10.13
10.8.1	Organic Electronics: A Cleaner Substitute for Silicon	10.13
10.8.2	Organic Photovoltaic Technology	10.14
10.8.3	Can We Replace Silicon Chips with Biochips?	10.14
10.8.4	New Plastic Resin Finds Home in Electronics Industry	10.14
	<i>References</i>	<i>10.14</i>

11. Gold, Silver and Platinum Nanomaterials

11.1 - 11.11

11.1	Introduction	11.1
11.2	General Properties	11.1
11.2.1	Energetic and Electronic Factors	11.2
11.2.2	Surface Area and Chemical Reactivity	11.3
11.2.3	Electronic Configurations	11.4
11.2.4	Surface Plasmon Resonance and Colour	11.4
11.2.5	Total Internal Reflection	11.5
11.2.6	Unusual Crystal Structures	11.7
11.2.7	Anomalous Melting Points	11.9
11.2.8	Enhanced Strength and Toughness	11.10
11.2.9	Magnetic Properties	11.10
11.3	Important Applications	11.10
	<i>References</i>	<i>11.11</i>

12. Composite Materials

12.1 - 12.15

12.1	Introduction	12.1
12.2	What are Composite Materials?	12.1
12.2.1	What are Nanocomposite Materials?	12.1
12.2.2	Why to go for Nanocomposite Materials?	12.2
12.3	Classification of Nanocomposites	12.2
12.3.1	Nonpolymer Based Nanocomposites	12.2
12.3.2	Polymer Based Nanocomposites	12.5
12.3.3	Biocomposites	12.14
	<i>References</i>	<i>12.15</i>

13. Catalysis

13.1 - 13.36

13.1	Introduction	13.1
13.2	Impact of Nanomaterials in Catalysis	13.2

13.3	Synthesis Strategies of Nanomaterials	13.6
13.4	Methods for Preparation of Supported Metal Nanoparticles	13.7
13.4.1	Controlled Colloidal Synthesis	13.7
13.4.2	Adsorption from Sol	13.8
13.4.3	Impregnation Technique	13.9
13.5	Applications of Nanomaterials in Various Fields of Catalysis	13.9
13.5.1	Nanomaterials in Acid Catalysis	13.9
13.5.2	Nanomaterials in Base Catalysis	13.20
13.5.3	Nanomaterials in Photocatalysis	13.27
13.5.4	Nanomaterials in Biocatalysis	13.31
13.6	Conclusions	13.34
	<i>References</i>	13.35
Index		I.1 - I.14
