## Deformation of Earth Materials

An Introduction to the Rheology of Solid Earth

SHUN-ICHIRO KARATO

## **C**ontents

Preface	
Part I General background	1
Stress and strain	3
1.1 Siress	3
1.2 Deformation, strain	7
2 Thermodynamics	13
2.1 Thermodynamics of reversible processes	13
2.2 Some comments on the thermodynamics of a stressed system	28
2.3 Thermodynamics of irreversible processes	29
2.4 Thermally activated processes	32
3 Phenomenological theory of deformation	34
3.1 Classification of deformation	34
3.2 Some general features of plastic deformation	35
3.3 Constitutive relationships for non-linear rheology	36
3.4 Constitutive relation for transient creep	38
3.5 Linear time-dependent deformation	39
Part II Materials science of deformation	49
4 Elasticity	51
4.1 Introduction	51
4.2 Elastic constants	52
4.3 Isothermal versus adiabatic elastic constants	55
4.4 Experimental techniques	57
4.5 Some general trends in elasticity: Birch's law	59
4.6 Effects of chemical composition	67
4.7 Elastic constants in several crystal structures	70
4.8 Effects of phase transformations	72
5 Crystalline defects	75
5.1 Defects and plastic deformation: general introduction	75
5.2 Point defects	76
5.3 Dislocations	82
5.4 Grain boundaries	94
6 Experimental techniques for study of plastic deformation	99
6.1 Introduction	99
6.2 Sample preparation and characterization	99

	6.3 Control of thermochemical environment and its characterization	102
	6.4 Generation and measurements of stress and strain	104
	6.5 Methods of mechanical tests	108
	6.6 Various deformation geometries	112
	, and a says manon geometric	112
7	Brittle deformation, brittle-plastic and brittle-ductile transition	114
	7.1 Brittle fracture and plastic flow: a general introduction	114
	7.2 Brittle fracture	115
	7.3 Transitions between different regimes of deformation	118
	· · ·	
8	Diffusion and diffusional creep	123
	8.1 Fick's law	123
	8.2 Diffusion and point defects	125
	8.3 High-diffusivity paths	126
	8.4 Self-diffusion, chemical diffusion	127
	8.5 Grain-size sensitive creep (diffusional creep, superplasticity)	129
_		
9	Dislocation creep	143
	9.1 General experimental observations on dislocation creep	143
	9.2 The Orowan equation	145
	9.3 Dynamics of dislocation motion	145
	9.4 Dislocation multiplication, annihilation	154
	9.5 Models for steady-state dislocation creep	157
	9.6 Low-temperature plasticity (power-law breakdown)	161
	9.7 Deformation of a polycrystalline aggregate by dislocation creep	162
	9.8 How to identify the microscopic mechanisms of creep	164
	9.9 Summary of dislocation creep models and a deformation mechanism map	164
10	9 Effects of pressure and water	168
	10.1 Introduction	168
	10.2 Intrinsic effects of pressure	169
	10.3 Effects of water	181
П	Physical mechanisms of seismic wave attenuation	199
	11.1 Introduction	199
	11.2 Experimental techniques of anelasticity measurements	199
	11.3 Solid-state mechanisms of anelasticity	202
	11.4 Anelasticity in a partially molten material	210
1.	2 Deformation of multi-phase materials	214
	12.1 Introduction	214
	12.2 Some simple examples	215
	12.3 More general considerations	216
	12.4 Percolation	222
	12.5 Chemical effects	225
	12.6 Deformation of a single-phase polycrystalline material	225
	12.7 Experimental observations	225
	12.8 Structure and plastic deformation of a partially molten material	227
13	3 Grain size	232
	13.1 Introduction	232
	13.2 Grain-boundary migration	233
	13.3 Grain growth	236
	13.4 Dynamic recrystallization	243

	13.5 Effects of phase transformations	249
	13.6 Grain size in Earth's interior	253
ì4	Lattice-preferred orientation	255
	14.1 Introduction	255
	14.2 Lattice-preferred orientation: definition, measurement and representation	256
	14.3 Mechanisms of lattice-preferred orientation	262
	14.4 A fabric diagram	268
	14.5 Summary	269
15	Effects of phase transformations	271
10	15.1 Introduction	271
	15.2 Effects of crystal structure and chemical bonding: isomechanical groups	271
	15.3 Effects of transformation-induced stress–strain: transformation plasticity	280
	15.4 Effects of grain-size reduction	286
	15.5 Anomalous rheology associated with a second-order phase transformation	286
	15.6 Other effects	287
14	Stability and localization of deformation	288
	16.1 Introduction	288
	16.2 General principles of instability and localization	289
	16.3 Mechanisms of shear instability and localization	293
	16.4 Long-term behavior of a shear zone	300
	16.5 Localization of deformation in Earth	300
	10.5 Education of deformation in Edith	500
D.	art III Geological and geophysical applications	303
ıa	are in Sectorical and geophysical applications	303
17	Composition and structure of Earth's interior	305
	17.1 Gross structure of Earth and other terrestrial planets	305
	17.2 Physical conditions of Earth's interior	206
		306
	17.3 Composition of Earth and other terrestrial planets	306 314
	17.3 Composition of Earth and other terrestrial planets 17.4 Summary: Earth structure related to rheological properties	
		314
		314
	17.4 Summary: Earth structure related to rheological properties	314 322
	17.4 Summary: Earth structure related to rheological properties  Inference of rheological structure of Earth from time-dependent deformation	314 322 323
18	17.4 Summary: Earth structure related to rheological properties  Inference of rheological structure of Earth from time-dependent deformation 18.1 Time-dependent deformation and rheology of Earth's interior	314 322 323 323
18	17.4 Summary: Earth structure related to rheological properties  Inference of rheological structure of Earth from time-dependent deformation 18.1 Time-dependent deformation and rheology of Earth's interior 18.2 Seismic wave attenuation	314 322 323 323
18	17.4 Summary: Earth structure related to rheological properties  Inference of rheological structure of Earth from time-dependent deformation 18.1 Time-dependent deformation and rheology of Earth's interior 18.2 Seismic wave attenuation 18.3 Time-dependent deformation caused by a surface load: post-glacial isostatic	314 322 323 323 324
18	17.4 Summary: Earth structure related to rheological properties  Inference of rheological structure of Earth from time-dependent deformation  18.1 Time-dependent deformation and rheology of Earth's interior  18.2 Seismic wave attenuation  18.3 Time-dependent deformation caused by a surface load: post-glacial isostatic crustal rebound	314 322 323 323 324
18	Inference of rheological structure of Earth from time-dependent deformation  18.1 Time-dependent deformation and rheology of Earth's interior  18.2 Seismic wave attenuation  18.3 Time-dependent deformation caused by a surface load: post-glacial isostatic crustal rebound  18.4 Time-dependent deformation caused by an internal load and its	314 322 323 323 324 326
18	Inference of rheological structure of Earth from time-dependent deformation  18.1 Time-dependent deformation and rheology of Earth's interior  18.2 Seismic wave attenuation  18.3 Time-dependent deformation caused by a surface load: post-glacial isostatic crustal rebound  18.4 Time-dependent deformation caused by an internal load and its gravitational signature	314 322 323 323 324 326 331
18	Inference of rheological structure of Earth from time-dependent deformation  18.1 Time-dependent deformation and rheology of Earth's interior  18.2 Seismic wave attenuation  18.3 Time-dependent deformation caused by a surface load: post-glacial isostatic crustal rebound  18.4 Time-dependent deformation caused by an internal load and its gravitational signature	314 322 323 323 324 326 331
18	Inference of rheological structure of Earth from time-dependent deformation  18.1 Time-dependent deformation and rheology of Earth's interior  18.2 Seismic wave attenuation  18.3 Time-dependent deformation caused by a surface load: post-glacial isostatic crustal rebound  18.4 Time-dependent deformation caused by an internal load and its gravitational signature  18.5 Summary	314 322 323 323 324 326 331 337
18	Inference of rheological structure of Earth from time-dependent deformation  18.1 Time-dependent deformation and rheology of Earth's interior  18.2 Seismic wave attenuation  18.3 Time-dependent deformation caused by a surface load: post-glacial isostatic crustal rebound  18.4 Time-dependent deformation caused by an internal load and its gravitational signature  18.5 Summary  Inference of rheological structure of Earth from mineral physics	314 322 323 323 324 326 331 337
18	Inference of rheological structure of Earth from time-dependent deformation  18.1 Time-dependent deformation and rheology of Earth's interior  18.2 Seismic wave attenuation  18.3 Time-dependent deformation caused by a surface load: post-glacial isostatic crustal rebound  18.4 Time-dependent deformation caused by an internal load and its gravitational signature  18.5 Summary  Inference of rheological structure of Earth from mineral physics  19.1 Introduction	314 322 323 323 324 326 331 337
18	Inference of rheological structure of Earth from time-dependent deformation  18.1 Time-dependent deformation and rheology of Earth's interior  18.2 Seismic wave attenuation  18.3 Time-dependent deformation caused by a surface load: post-glacial isostatic crustal rebound  18.4 Time-dependent deformation caused by an internal load and its gravitational signature  18.5 Summary  Inference of rheological structure of Earth from mineral physics  19.1 Introduction  19.2 General notes on inferring the rheological properties in Earth's interior	314 322 323 323 324 326 331 337 338 338
18	Inference of rheological structure of Earth from time-dependent deformation  18.1 Time-dependent deformation and rheology of Earth's interior  18.2 Seismic wave attenuation  18.3 Time-dependent deformation caused by a surface load: post-glacial isostatic crustal rebound  18.4 Time-dependent deformation caused by an internal load and its gravitational signature  18.5 Summary  Inference of rheological structure of Earth from mineral physics  19.1 Introduction  19.2 General notes on inferring the rheological properties in Earth's interior from mineral physics	314 322 323 323 324 326 331 337 338 338
18	Inference of rheological structure of Earth from time-dependent deformation  18.1 Time-dependent deformation and rheology of Earth's interior  18.2 Seismic wave attenuation  18.3 Time-dependent deformation caused by a surface load: post-glacial isostatic crustal rebound  18.4 Time-dependent deformation caused by an internal load and its gravitational signature  18.5 Summary  Inference of rheological structure of Earth from mineral physics  19.1 Introduction  19.2 General notes on inferring the rheological properties in Earth's interior from mineral physics  19.3 Strength profile of the crust and the upper mantle	314 322 323 323 324 326 331 337 338 338 339 342
18	Inference of rheological structure of Earth from time-dependent deformation  18.1 Time-dependent deformation and rheology of Earth's interior  18.2 Seismic wave attenuation  18.3 Time-dependent deformation caused by a surface load: post-glacial isostatic crustal rebound  18.4 Time-dependent deformation caused by an internal load and its gravitational signature  18.5 Summary  Inference of rheological structure of Earth from mineral physics  19.1 Introduction  19.2 General notes on inferring the rheological properties in Earth's interior from mineral physics  19.3 Strength profile of the crust and the upper mantle  19.4 Rheological properties of the deep mantle	314 322 323 323 324 326 331 337 338 338 339 342 358
18	Inference of rheological structure of Earth from time-dependent deformation  18.1 Time-dependent deformation and rheology of Earth's interior  18.2 Seismic wave attenuation  18.3 Time-dependent deformation caused by a surface load: post-glacial isostatic crustal rebound  18.4 Time-dependent deformation caused by an internal load and its gravitational signature  18.5 Summary  Inference of rheological structure of Earth from mineral physics  19.1 Introduction  19.2 General notes on inferring the rheological properties in Earth's interior from mineral physics  19.3 Strength profile of the crust and the upper mantle  19.4 Rheological properties of the deep mantle  19.5 Rheological properties of the core  Heterogeneity of Earth structure and its geodynamic implications	314 322 323 323 324 326 331 337 338 338 339 342 358
18	Inference of rheological structure of Earth from time-dependent deformation  18.1 Time-dependent deformation and rheology of Earth's interior  18.2 Seismic wave attenuation  18.3 Time-dependent deformation caused by a surface load: post-glacial isostatic crustal rebound  18.4 Time-dependent deformation caused by an internal load and its gravitational signature  18.5 Summary  Inference of rheological structure of Earth from mineral physics  19.1 Introduction  19.2 General notes on inferring the rheological properties in Earth's interior from mineral physics  19.3 Strength profile of the crust and the upper mantle  19.4 Rheological properties of the deep mantle  19.5 Rheological properties of the core	314 322 323 323 324 326 331 337 338 338 339 342 358 361
18	Inference of rheological structure of Earth from time-dependent deformation  18.1 Time-dependent deformation and rheology of Earth's interior  18.2 Seismic wave attenuation  18.3 Time-dependent deformation caused by a surface load: post-glacial isostatic crustal rebound  18.4 Time-dependent deformation caused by an internal load and its gravitational signature  18.5 Summary  Inference of rheological structure of Earth from mineral physics  19.1 Introduction  19.2 General notes on inferring the rheological properties in Earth's interior from mineral physics  19.3 Strength profile of the crust and the upper mantle  19.4 Rheological properties of the deep mantle  19.5 Rheological properties of the core  Heterogeneity of Earth structure and its geodynamic implications	314 322 323 323 324 326 331 337 338 338 339 342 358 361
19	Inference of rheological structure of Earth from time-dependent deformation  18.1 Time-dependent deformation and rheology of Earth's interior  18.2 Seismic wave attenuation  18.3 Time-dependent deformation caused by a surface load: post-glacial isostatic crustal rebound  18.4 Time-dependent deformation caused by an internal load and its gravitational signature  18.5 Summary  Inference of rheological structure of Earth from mineral physics  19.1 Introduction  19.2 General notes on inferring the rheological properties in Earth's interior from mineral physics  19.3 Strength profile of the crust and the upper mantle  19.4 Rheological properties of the deep mantle  19.5 Rheological properties of the core  Heterogeneity of Earth structure and its geodynamic implications  20.1 Introduction	314 322 323 323 324 326 331 337 338 338 339 342 358 361
