

Mathematics and Its Applications

---

Olga Hadžić and Endre Pap

Fixed Point Theory in  
Probabilistic Metric Spaces

Kluwer Academic Publishers

# Contents

<b>Introduction</b>	<b>vii</b>
<b>1 Triangular norms</b>	<b>1</b>
1.1 Triangular norms and conorms . . . . .	1
1.2 Properties of t-norms . . . . .	5
1.3 Ordinal sums . . . . .	10
1.4 Representation of continuous t-norms . . . . .	13
1.4.1 Pseudo-inverse . . . . .	13
1.4.2 Additive generators . . . . .	15
1.4.3 Multiplicative generators . . . . .	19
1.4.4 Isomorphism of continuous Archimedean t-norms with either $T_P$ or $T_L$ . . . . .	21
1.4.5 General continuous t-norms . . . . .	22
1.5 t-norms with left-continuous diagonals . . . . .	24
1.6 Triangular norms of $H$ -type . . . . .	26
1.7 Comparison of t-norms . . . . .	29
1.7.1 Comparison of continuous Archimedean t-norms . . . . .	29
1.7.2 Comparison of continuous t-norms . . . . .	33
1.7.3 Domination of t-norms . . . . .	35
1.8 Countable extension of t-norms . . . . .	38
<b>2 Probabilistic metric spaces</b>	<b>47</b>
2.1 Copulas and triangle functions . . . . .	47
2.1.1 Copulas . . . . .	47
2.1.2 Triangle functions . . . . .	50
2.2 Definitions of probabilistic metric spaces . . . . .	53
2.3 Some classes of probabilistic metric spaces . . . . .	55
2.3.1 Menger and Wald spaces . . . . .	56
2.3.2 Transformation-generated spaces . . . . .	59
2.3.3 $E$ -processes and Markov chains. . . . .	60
2.4 Topology, uniformity, metrics and semi-metrics on probabilistic metric spaces . . . . .	62

2.5	Random normed and para-normed spaces . . . . .	65
2.6	Fuzzy metric spaces . . . . .	70
2.7	Functions of non-compactness . . . . .	75
2.8	Probabilistic metric spaces related to decomposable measure . . . . .	85
2.8.1	Decomposable measures . . . . .	85
2.8.2	Related probabilistic metric spaces . . . . .	91
<b>3</b>	<b>Probabilistic <math>B</math>-contraction principles for single-valued mappings</b>	<b>95</b>
3.1	Probabilistic $B$ -contraction principles . . . . .	96
3.2	Two special classes of probabilistic $q$ -contractions . . . . .	111
3.3	Generalizations of probabilistic $B$ -contractions principles for single- valued mappings . . . . .	116
3.4	Fixed point theorems of Caristi's type . . . . .	132
3.5	Common fixed point theorems . . . . .	140
<b>4</b>	<b>Probabilistic <math>B</math>-contraction principles for multi-valued mappings</b>	<b>155</b>
4.1	Multi-valued contractions of Miheţ's type . . . . .	155
4.2	Multi-valued probabilistic $\Psi$ -contractions . . . . .	158
4.3	Probabilistic Nadler $q$ -contraction . . . . .	162
4.4	A fixed point theorem of Itoh's type . . . . .	168
4.5	Fixed point theorems in probabilistic metric spaces with convex struc- tures . . . . .	174
4.6	A common fixed point theorem for sequence of mappings . . . . .	181
<b>5</b>	<b>Hicks' contraction principle</b>	<b>185</b>
5.1	Hicks' contraction principle for single-valued mappings . . . . .	185
5.2	Multi-valued generalizations of Hicks' contraction principle . . . . .	195
<b>6</b>	<b>Fixed point theorems in topological vector spaces and applications to random normed spaces</b>	<b>205</b>
6.1	Tychonoff's and Browder's fixed point theorems . . . . .	206
6.2	Admissible subsets of topological vector spaces and their application on the fixed point theory . . . . .	213
6.3	Fixed point theorems of Krasnoselski's type . . . . .	225
6.4	Continuous dependence of the fixed points on the parameters of $(\alpha, g)$ - condensing mappings . . . . .	233
6.5	A degree theory in topological vector spaces . . . . .	239
