Preface: An introduction to medical biotechnology (<i>J. Pongracz and M. Keen</i>)	xi
1. The molecular basis of disease (<i>J. Pongracz</i>)	1
2. Gene hunting (<i>J. Pongracz</i>)	15
3. Using genetic information (<i>J. Pongracz</i>)	31
4. Epigenetics (<i>K. Nightingale</i>)	45
5. Protein structure and function (<i>M. Keen</i>)	59
6. Proteomics and metabolomics (<i>Z. Nagy and D. Richards</i>)	73
7. Vaccines (<i>D. Bartis</i>)	83
8. Transgenics (<i>A. Bacon and J. Frampton</i>)	99
9. Pharmacogenetics (<i>M. Keen</i>)	113
10. Gene therapy (<i>M. Keen</i>)	125
11. Biopharmaceuticals (<i>M. Keen</i>)	135
12. Stem cells and tissue engineering (<i>L. Buttery, F. Rose and K. Shakesheff</i>)	149
Appendix 1: Perspectives — future developments (<i>M. Keen and J. Pongracz</i>)	167
Appendix 2: Glossary of experimental techniques (<i>T. Czompoly and K. Kvell</i>)	169
Index	187
