

Series on Neutron Techniques and Applications – Vol. 4

Neutron Scattering in Condensed Matter Physics

Albert Furrer
Joël Mesot
Thierry Strässle

Contents

<i>Preface</i>	v
1. Introduction	1
1.1 Why neutron scattering?	1
1.2 Basic properties of the neutron	2
2. Basic Principles of Neutron Scattering	7
2.1 Aim of a neutron scattering experiment	7
2.2 Neutron scattering cross-section	8
2.3 Correlation functions	10
2.4 Coherent and incoherent scattering	12
2.5 Principle of detailed balance	14
2.6 Magnetic scattering	15
2.7 Polarized neutrons	19
2.8 Dynamical neutron scattering	21
2.9 Further reading	23
3. Instrumentation	25
3.1 Neutron sources	25
3.1.1 Historical evolution of neutron sources	25
3.1.2 Practical requirements for neutron sources	26
3.1.3 Fission sources	26
3.1.4 Spallation sources	27
3.1.5 Moderation of neutrons	29
3.2 Instrument components	30
3.2.1 Beam tubes and static collimators	30

3.2.2	Neutron guides	31
3.2.3	<i>Time-of-flight monochromators</i>	33
3.2.4	Monochromator (and analyzer) crystals	34
3.2.5	<i>Neutron beam filters</i>	37
3.2.6	Spin polarizers (and spin analyzers)	38
3.2.7	Guide fields and spin flippers	39
3.2.8	Detectors	40
3.3	Neutron instruments	41
3.3.1	Introductory remarks	41
3.3.2	Powder diffractometers	42
3.3.3	Single-crystal diffractometers	43
3.3.4	<i>Small-angle scattering instruments</i>	45
3.3.5	Reflectometers	46
3.3.6	Time-of-flight spectrometers	48
3.3.7	Triple-axis spectrometers	50
3.3.8	Backscattering spectrometers	51
3.3.9	<i>Spin-echo spectrometers</i>	52
3.4	Sample environment	54
3.4.1	Temperature	54
3.4.2	Magnetic field	56
3.4.3	Pressure	57
3.5	<i>Further reading</i>	61
4.	Structure Determination	63
4.1	Cross section	63
4.2	Examples of structure factors	65
4.3	Polycrystalline materials	66
4.4	Single crystals	69
4.4.1	Rotating crystal method	70
4.4.2	Laue method	70
4.5	Extinction and absorption	71
4.6	Characterization of residual stress	73
4.7	Further reading	74
4.8	Exercises	76
4.9	Solutions	79
5.	Lattice Dynamics	85
5.1	Cross section for one-phonon scattering	85

5.2	Phonon dispersion relations and phonon polarization vectors	89
5.2.1	Linear chain with identical atoms	89
5.2.2	Linear chain with two different atoms	91
5.2.3	<i>Experimental</i>	93
5.3	Incoherent scattering: phonon density of states	95
5.4	Multi-phonon processes: coherent scattering	98
5.5	Further reading	98
5.6	Exercises	98
5.7	Solutions	101
6.	Liquids and Amorphous Materials	105
6.1	Introduction	105
6.2	Static structure factor	107
6.3	Diffusion	112
6.4	Further reading	118
6.5	Exercises	119
6.6	Solutions	120
7.	Magnetic Structures	123
7.1	General cross section	123
7.2	Paramagnets	123
7.3	Ferromagnets	124
7.4	Antiferromagnets	125
7.5	Helical spin structures (magnetic spiral structures)	127
7.6	Magnetic ordering wavevector	130
7.7	Zero-field magnetization	130
7.8	Spin densities	131
7.9	Further reading	132
7.10	Exercises	133
7.11	Solutions	134
8.	Magnetic Excitations	137
8.1	Magnetic cluster excitations	137
8.1.1	Dimers	137
8.1.2	Trimers	139
8.1.3	Tetramers	142
8.1.4	N-mers	143
8.2	Spin waves	145

8.2.1	Ferromagnets	145
8.2.2	Antiferromagnets	149
8.2.3	The random-phase approximation	151
8.3	Solitons	154
8.4	Further reading	156
8.5	Exercises	157
8.6	Solutions	160
9.	Crystal-Field Transitions	163
9.1	Elementary concept of crystal fields	163
9.2	Crystal-field interaction of f -electron systems	166
9.3	Neutron cross-section	169
9.4	Interactions of the crystal-field split ions	172
9.5	Intermultiplet crystal-field transitions	174
9.6	Calculation of thermodynamic magnetic properties	174
9.7	Further reading	176
9.8	Exercises	176
9.9	Solutions	177
10.	Phase Transitions	181
10.1	Introduction	181
10.2	Structural phase transitions	182
10.3	Phase transitions in ice	185
10.4	Magnetic phase transitions	191
10.5	Quantum phase transitions	193
10.6	Further reading	197
11.	Superconductivity	199
11.1	Introduction	199
11.2	The flux-line lattice	202
11.3	Phonon density of states	204
11.4	Phonon energies and linewidths	206
11.5	Relaxation effects of crystal-field transitions	208
11.6	Spin fluctuations in high-temperature superconductors	210
11.7	Further reading	213
12.	Superfluidity	215
12.1	Introduction	215

12.2	Liquid ^4He	216
12.2.1	Phase diagram	216
12.2.2	Elementary excitations	216
12.2.3	The condensate fraction	218
12.2.4	Static structure factor	219
12.3	Liquid ^3He	221
12.3.1	Phase diagram	221
12.3.2	Elementary excitations	222
12.4	Further reading	223
13.	Defects in Solids	225
13.1	Introduction	225
13.2	Short-range order of point defects	226
13.3	Macro-defects	230
13.4	The triangulation method	232
13.5	Resonant and local modes	233
13.6	Further reading	236
14.	Surfaces and Interfaces	237
14.1	Introduction	237
14.2	Specular reflection	240
14.3	Off-specular reflection	244
14.4	Grazing incidence scattering	246
14.5	Further reading	247
15.	Hydrogen Dynamics	249
15.1	Introduction	249
15.2	Dynamics of the hydrogen bond	249
15.3	Hydrogen tunnelling	255
15.4	Further reading	259
15.5	Exercises	260
15.6	Solutions	261
Appendix A	Dirac δ -function and Lattice Sums	263
Appendix B	Neutron Scattering Lengths and Cross Sections	265
Appendix C	Pauli Spin Operators	271

Appendix D	Cross Section for Magnetic Neutron Scattering	273
Appendix E	Crystal Lattice and Reciprocal Lattice	277
Appendix F	The 3-j and 6-j Symbols	279
Appendix G	Impulse Approximation	281
	<i>List of Symbols</i>	285
	<i>Bibliography</i>	289
	<i>Index</i>	295
