Contents

Preface *xi*

1. Introduction **1**

1.1 Development of Control Systems *1*
1.2 Non-feedback and Feedback Systems *4*
1.3 Degenerative (Negative) Feedback—a Means of Automatic Regulation *6*
1.4 Basic Classification of Control Systems *10*
Summary *12*
References and Suggested Readings *13*

2. System Modelling and Mathematical Representation of Systems **14**

2.1 Classification of System Models *14*
2.2 Input–Output Description of Systems *27*
2.3 Block Diagram Simplification of Continuous-time Systems *41*
2.4 Signal Flow Graph Representation of Continuous-time Systems *46*
Summary *49*
References and Suggested Readings *50*
Review Questions *50*
Problems *51*

3. Time Domain Analysis and Design: Input–Output Approach **55**

3.1 Time Domain Response *55*
3.2 Steady State Error and Error Coefficients *63*
3.3 Design Considerations for Second Order Systems *68*
3.4 Design Considerations using Programmable Logic Controller *73*
3.5 Time Domain Response Consideration for Higher Order System *75*
Summary *78*
References and Suggested Readings *78*
Review Questions *78*
Analysis and Design Problems *78*

4. State Variable Approach to Time Domain Analysis **82**

4.1 Why State Variable Approach? *82*
4.2 System State and State Variable Representation *83*
4.3 Equivalence of State Variable and Transfer Function Approach *85*
4.4 State Variable Representation of Continuous-Time System *90*
4.5 State Variable Representation of Discrete-Time System *99*
4.6 System Response and State Transition Matrix (STM) *103*
4.7 Computation of State Transition Matrix *108*

4.8 State Variable Representation of Nonlinear Systems *115*
4.9 Additional Applications of STM *118*
Summary 119
References and Suggested Readings 120
Review Questions 120
Problems 120

5. Integrated Approach to Stability Analysis **125**

5.1 Basic Stability Concepts of Linear Systems *125*
5.2 Absolute Stability Criteria for Continuous Time Systems *128*
5.3 Relative Stability *139*
5.4 Liapunov Stability Concepts *139*
5.5 Direct (Second) Method of Liapunov *141*
Summary 146
References and Suggested Readings 146
Review Quetions 146
Problems 147

6. Root-Locus Technique and Design in Time Domain **149**

6.1 Fundamentals of Root Locus *149*
6.2 Construction of Root Loci *151*
6.3 Root Contour Diagram *160*
6.4 Time-domain Design Using Compensator Networks *162*
Summary 168
References and Suggested Readings 168
Review Questions 169
Problems 169

7. Frequency Response Analysis and Design **171**

7.1 Interrelation between Time and Frequency Response *171*
7.2 Minimum Phase and All-Pass Function *174*
7.3 Bode Plot and Relative Stability Consideration *175*
7.4 Computation of Relative Stability using Nyquist Criterion *183*
7.5 Relative Stability using Nichols Chart *185*
7.6 Design Perspective in Frequency Domain *188*
Summary 194
References and Suggested Readings 194
Review Questions 194
Problems 194

8. Design of Digital Control Systems **197**

8.1 Configuration of Digital Control System *197*
8.2 Data Acquisition and Signal Conversion *199*
8.3 Pulse Transfer Function and Z-Transfer Function *203*
8.4 Stability Criteria for Digital Systems *206*

8.5 Design of Digital Control Systems *218*
Summary 228
References and Suggested Readings 228
Review Questions 229
Analysis and Design Problems 229

9. State Feedback Systems Design **233**

9.1 Full-State Feedback Design of Continuous-time Control Systems *233*
9.2 Observer Design *240*
9.3 Full-State Feedback and Observer Design: Compensator Design *242*
9.4 State Feedback Design of Discrete-time Control Systems *244*
Summary 253
References and Suggested Readings 254
Review Questions 254
Analysis and Design Problems 254

10. Nonlinear Dynamical Systems **258**

10.1 Common Nonlinearities, Properties and Analysis of Nonlinear Systems *258*
10.2 Phase Plane Method *261*
10.3 Describing Function Method *269*
10.4 Stability Analysis using Describing Functions *274*
10.5 Absolute Stability of Nonlinear Systems *278*
10.6 Liapunov Stability of Nonlinear Systems *279*
Summary 283
Appendix 10.1 284
References and Suggested Readings 285
Review Questions 286
Problems 286

11. Optimal and Adaptive Control Systems **290**

11.1 Parameter Optimization Problem *290*
11.2 Optimal Control Problem Definition *294*
11.3 Performance Index and Optimal Control Law *295*
11.4 Basic Optimal Control Design *297*
11.5 Robust Control Systems *304*
11.6 Basic Adaptive Control System *309*
Summary 319
References and Suggested Readings 319
Review Questions 320
Analysis and Design Problems 321

Appendix A: Review of Laplace Transforms **324**
Appendix B: Control System Sensors and Actuators **330**
Appendix C: Fuzzy Control Systems and Neural Systems **349**
Appendix D: MATLAB and Simulink Tutorial **369**
Index **387**
