

Paul M Dewick

Third Edition

# Medicinal Natural Products

A Biosynthetic Approach

 WILEY

# CONTENTS

<b>1 About this book, and how to use it</b>	<b>1</b>
The subject	1
The aim	1
The approach	2
The topics	2
The figures	2
Further reading	3
What to study	3
What to learn	3
Nomenclature	3
Conventions regarding acids, bases, and ions	4
Some common abbreviations	4
Further reading	5
<b>2 Secondary metabolism: the building blocks and construction mechanisms</b>	<b>7</b>
Primary and secondary metabolism	7
The building blocks	8
The construction mechanisms	11
Alkylation reactions: nucleophilic substitution	12
Alkylation reactions: electrophilic addition	12
Wagner–Meerwein rearrangements	15
Aldol and Claisen reactions	15
Imine formation and the Mannich reaction	18
Amino acids and transamination	20
Decarboxylation reactions	22
Oxidation and reduction reactions	24
Dehydrogenases	24
Oxidases	26
Monooxygenases	26
Dioxygenases	26
Amine oxidases	27
Baeyer–Villiger monooxygenases	27
Phenolic oxidative coupling	28
Halogenation reactions	28
Glycosylation reactions	31
Elucidating biosynthetic pathways	34
Further reading	38

<b>3 The acetate pathway: fatty acids and polyketides</b>	39
Fatty acid synthase: saturated fatty acids	39
Unsaturated fatty acids	44
Uncommon fatty acids	53
Prostaglandins	58
Thromboxanes	64
Leukotrienes	64
Polyketide synthases: generalities	66
Polyketide synthases: macrolides	68
Polyketide synthases: linear polyketides and polyethers	90
Diels–Alder cyclizations	96
Polyketide synthases: aromatics	96
Cyclizations	99
Post-polyketide synthase modifications	103
Starter groups	116
Further reading	131
<b>4 The shikimate pathway: aromatic amino acids and phenylpropanoids</b>	137
Aromatic amino acids and simple benzoic acids	137
Phenylpropanoids	148
Cinnamic acids and esters	148
Lignans and lignin	152
Phenylpropenes	156
Benzoic acids from C <sub>6</sub> C <sub>3</sub> compounds	157
Coumarins	161
Aromatic polyketides	166
Styrylpyrones, diarylheptanoids	166
Flavonoids and stilbenes	167
Flavonolignans	173
Isoflavonoids	174
Terpenoid quinones	178
Further reading	184
<b>5 The mevalonate and methylerythritol phosphate pathways: terpenoids and steroids</b>	187
Mevalonic acid and methylerythritol phosphate	188
Hemiterpenes (C <sub>5</sub> )	192
Monoterpenes (C <sub>10</sub> )	193
Irregular monoterpenes	204
Iridoids (C <sub>10</sub> )	206
Sesquiterpenes (C <sub>15</sub> )	210
Diterpenes (C <sub>20</sub> )	223
Sesterterpenes (C <sub>25</sub> )	234
Triterpenes (C <sub>30</sub> )	234
Triterpenoid saponins	242
Steroids	247
Stereochemistry and nomenclature	247
Cholesterol	248
Phytosterols	251
Vitamin D	256
Steroidal saponins	259
Cardioactive glycosides	265
Bile acids	275

Adrenocortical hormones/corticosteroids . . . . .	277
Semi-synthesis of corticosteroids . . . . .	277
Progestogens . . . . .	287
Oestrogens . . . . .	290
Androgens . . . . .	296
Tetraterpenes (C <sub>40</sub> ) . . . . .	298
Higher terpenoids . . . . .	306
Further reading . . . . .	306
<b>6 Alkaloids . . . . .</b>	<b>311</b>
Alkaloids derived from ornithine . . . . .	311
Polyamines . . . . .	311
Pyrrolidine and tropane alkaloids . . . . .	312
Pyrrolizidine alkaloids . . . . .	324
Alkaloids derived from lysine . . . . .	326
Piperidine alkaloids . . . . .	326
Quinolizidine alkaloids . . . . .	328
Indolizidine alkaloids . . . . .	330
Alkaloids derived from nicotinic acid . . . . .	331
Pyridine alkaloids . . . . .	331
Alkaloids derived from tyrosine . . . . .	336
Phenylethylamines and simple tetrahydroisoquinoline alkaloids . . . . .	336
Modified benzyltetrahydroisoquinoline alkaloids . . . . .	346
Phenethylisoquinoline alkaloids . . . . .	359
Terpenoid tetrahydroisoquinoline alkaloids . . . . .	363
Amaryllidaceae alkaloids . . . . .	365
Alkaloids derived from tryptophan . . . . .	366
Simple indole alkaloids . . . . .	366
Simple $\beta$ -carboline alkaloids . . . . .	369
Terpenoid indole alkaloids . . . . .	369
Quinoline alkaloids . . . . .	380
Pyrroloindole alkaloids . . . . .	385
Ergot alkaloids . . . . .	387
Alkaloids derived from anthranilic acid . . . . .	395
Quinazoline alkaloids . . . . .	395
Quinoline and acridine alkaloids . . . . .	396
Alkaloids derived from histidine . . . . .	398
Imidazole alkaloids . . . . .	398
Alkaloids derived by amination reactions . . . . .	400
Acetate-derived alkaloids . . . . .	401
Phenylalanine-derived alkaloids . . . . .	401
Terpenoid alkaloids . . . . .	406
Steroidal alkaloids . . . . .	406
Purine alkaloids . . . . .	413
Caffeine . . . . .	413
Saxitoxin and tetrodotoxin . . . . .	416
Further reading . . . . .	417
<b>7 Peptides, proteins, and other amino acid derivatives . . . . .</b>	<b>421</b>
Peptides and proteins . . . . .	421
Ribosomal peptide biosynthesis . . . . .	422
Peptide hormones . . . . .	426

---

Thyroid hormones . . . . .	426
Hypothalamic hormones . . . . .	427
Anterior pituitary hormones . . . . .	429
Posterior pituitary hormones . . . . .	430
Pancreatic hormones . . . . .	432
Interferons . . . . .	433
Opioid peptides . . . . .	434
Ribosomal peptide toxins . . . . .	434
Enzymes . . . . .	438
Non-ribosomal peptide biosynthesis . . . . .	438
Modified peptides: penicillins, cephalosporins, and other $\beta$ -lactams . . . . .	458
Penicillins . . . . .	458
Cephalosporins . . . . .	465
Other $\beta$ -lactams . . . . .	469
Cyanogenic glycosides . . . . .	476
Glucosinolates . . . . .	477
Cysteine sulfoxides . . . . .	480
Further reading . . . . .	481
<b>8 Carbohydrates . . . . .</b>	<b>485</b>
Monosaccharides . . . . .	485
Oligosaccharides . . . . .	490
Polysaccharides . . . . .	493
Aminosugars and aminoglycosides . . . . .	498
Further reading . . . . .	507
<b>Index . . . . .</b>	<b>509</b>
