

Integrated Environmental Technology Series

Resource Recovery and Reuse in Organic Solid Waste Management

Edited by Piet Lens, Bert Hamelers,
Harry Hoitink and Werner Bidlingmaier

IWA
Publishing

Contents

<i>Preface</i>	<i>xi</i>
<i>Contributors</i>	<i>xv</i>
PART ONE Integral aspects of solid waste management	1
Section IA Concepts	3
1. Material metabolism through society and environment: a new view on waste management	3
<i>H.C. Moll</i>	
1.1 Introduction	3
1.2 A brief history of waste management	5
1.3 Present-day technologies for waste management	6
1.4 Economic and environmental evaluations of waste management	9
1.5 Sustainable approaches for material and waste management	14
1.6 Cases of improvement of material quality management	18
1.7 Towards sustainable waste management	21
1.8 Conclusions	22
References	22
2. Eco-industrial design of biomass cycles: flows, technologies, and actors	24
<i>C.S.A. Van Koppen</i>	
2.1 Introduction	24
2.2 IE, a bird's eye view	25

2.3	Angles of IE design	28
2.4	Assessing flows, technologies, and actors	30
2.5	Finding factor–technology–actor combinations	37
2.6	Conclusions	40
	References	42
Section IB Tools – system analysis		45
3.	System analysis of organic waste management schemes – experiences of the ORWARE model	45
	<i>J.-O. Sundqvist</i>	
3.1	Introduction	45
3.2	Life cycle assessments	46
3.3	The ORWARE model	49
3.4	Earlier ORWARE studies	54
3.5	Further analysis of ORWARE data – objectives and system boundaries	55
3.6	Further analysis of ORWARE data – results	60
3.7	The relevance for other countries	66
3.8	Conclusions	68
	References	69
4.	Biowaste management from an ecological perspective	71
	<i>F. Knappe, R. Vogt and B. Franke</i>	
4.1	Introduction	71
4.2	Materials and methods	73
4.3	Results	78
4.4	Discussion	85
4.5	Conclusion	90
	References	90
PART TWO Socio-economic aspects of solid waste management		93
Section IIA Economic aspects		95
5.	Cost and benefits of bioprocesses in waste management	95
	<i>D. Hogg</i>	
5.1	System analysis of solid waste management	95
5.2	Emissions from the composting process	99
5.3	Benefits from compost utilisation	103
5.4	Concluding observations	115
5.5	Conclusions	117
	References	119

6.	Modelling the municipal solid waste management problem in an applied spatial general equilibrium framework	122
	<i>H. Bartelings, R.B. Dellink and E.C. van Ierland</i>	
6.1	Introduction	122
6.2	Modelling the municipal solid waste problem taking into account the spatial aspects	125
6.3	Model application and numerical analysis	130
6.4	Discussion and conclusions	139
	References	140
Section IIB Legislative aspects		143
7.	Impacts of European legislation on biotreatment and recovery of organic solid waste	143
	<i>R. Braun and R. Kirchmayr</i>	
7.1	Introduction	143
7.2	Implication of European legislation on collection, treatment and recovery of wastes – an overview	144
7.3	Biological treatment of biowaste, working document	146
7.4	ABP regulation (EC) NO. 1774/2002	148
7.5	Conclusions	155
	References	156
8.	Products from waste: quality assurance systems	157
	<i>J. Barth</i>	
8.1	Introduction	157
8.2	Standardisation as a precondition for the product property	159
8.3	Legal point of view of a product status	160
8.4	Conclusion	168
	References	168
PART THREE Bioprocesses in organic solid waste management		169
Section IIIA Process fundamentals		171
9.	Solid-state NMR investigations of organic matter conversions during solid-waste processing	171
	<i>H. Knicker</i>	
9.1	Introduction	171
9.2	Basic NMR theory	172
9.3	Application of solid-state ^{13}C and ^{15}N NMR to solid waste	179
9.4	Conclusions and future perspectives	189
	References	190

10.	Microbial ecology of compost	193
	<i>M.N. Marshall, A.P. Reddy and J.S. VanderGheynst</i>	
10.1	Introduction	193
10.2	Monitoring microbial communities in compost	194
10.3	Microbial community dynamics during composting	203
10.4	Influence of process management on microbial communities	215
10.5	Conclusions	220
	References	221
Section IIIB Bioprocess operation		225
11.	Overview of resource recovery technologies for biowastes	225
	<i>W.H. Rulkens</i>	
11.1	Introduction	225
11.2	Environmental technology	226
11.3	Treatment of MSW	229
11.4	Treatment of sewage sludge	240
11.5	Treatment of pig manure	249
11.6	General discussion	259
	References	260
12.	Fundamental parameters of aerobic solid-state bioconversion processes	262
	<i>T.L. Richard</i>	
12.1	Introduction	262
12.2	Composting parameters	264
12.3	Conclusions	273
	References	274
13.	Trends in solid-waste management through composting in the US	278
	<i>H.A.J. Hoitink and F.C. Michel Jr</i>	
13.1	Introduction	278
13.2	Trends in municipal and industrial solid wastes	280
13.3	Trends in composting of manures	282
13.4	Trends in utilization of composts	284
	References	286
14.	Anaerobic bioprocess concepts	290
	<i>J. Mata-Alvarez and S. Macé</i>	
14.1	Introduction	290
14.2	Main steps in ad processes	292
14.3	Environmental factors controlling the AD process	295
14.4	Important parameters in anaerobic digesters	298
14.5	Biodegradability and degree of biodegradation	301

14.6	Types of digesters	302
14.7	Final remarks	310
14.8	Conclusions	311
	References	312
PART FOUR Resources from organic solid waste		315
Section IVA Aerobic products		317
15.	Use of compost as suppressor of plant diseases <i>D. De Clercq, L. Vandesteene, J. Coosemans and J. Ryckeboer</i>	317
15.1	Introduction	317
15.2	Soilborne plant diseases suppressed by compost	319
15.3	Factors in disease suppression	321
15.4	Biocontrol agents and compost maturity	326
15.5	Controlled fortification	327
15.6	Restrictions	328
15.7	Prediction of suppressiveness	329
15.8	Conclusions	331
	References	332
16.	Indicators for determination of stability of composts and recycled organic wastes <i>A. de Guardia, A. Tremier and J. Martinez</i>	338
16.1	Introduction	338
16.2	Process stability indicators	340
16.3	Most common physical and chemical stability indicators	342
16.4	Microbiological indicators	354
16.5	Biochemical indicators	359
16.6	Spectroscopic indicators	364
16.7	Thermal fractionation methods	368
16.8	Phytotoxic indicators	368
16.9	Conclusion	371
	References	371
Section IVB Anaerobic products		377
17.	Manure-based biogas systems <i>J.B. Holm-Nielsen and T. Al Seadi</i>	377
17.1	The place of biogas in the Danish energy strategy	377
17.2	Biogas technologies	380
17.3	Technical experience with centralised biogas production in Denmark	385
17.4	Organisation and financing	390

17.5	Driving forces for further anaerobic digestion development	392
17.6	Conclusion	393
	References	394
18.	Electricity production from agricultural wastes through valorisation of biogas	395
	<i>T. Ahrens and P. Weiland</i>	
18.1	Introduction	395
18.2	The biogas process	397
18.3	Energy converting aspects	403
18.4	PEM-FC pilot plant	406
18.5	Conclusion	410
	References	410
19.	Trendsetter: biogas in European vehicles	411
	<i>G. Landahl and C. Plombin</i>	
19.1	Introduction	411
19.2	Biogas production and use in Europe	413
19.3	Biogas as fuel for vehicles	415
19.4	<i>Trendsetter</i> biogas projects in Stockholm and Lille	419
19.5	Conclusion	422
	Section IVC Novel developments	423
20.	Bioplastics from waste materials	423
	<i>P.C. Lemos, L.S. Serafim, A.M. Ramos and M.A.M. Reis</i>	
20.1	Introduction	423
20.2	PHA	424
20.3	PHA production	426
20.4	PHA utilization	434
20.5	Biodegradability of PHA	437
20.6	Conclusions	438
	Reference	438
21.	Biological production of hydrogen from waste and biomass	441
	<i>G. Lyberatos, H.N. Gavalas, I.V. Skiadas, M. Kornaros, K. Stamatelatos and K. Angelopoulos</i>	
21.1	Introduction	441
21.2	Fermentation	442
21.3	Example applications of biohydrogen production	449
21.4	Conclusions	453
	References	453

Section IVD	Constraints for resource recovery and reuse	459
22.	Hygienic safety in organic waste management	459
	<i>R. Böhm</i>	
22.1	Introduction	459
22.2	Occupational health aspects	460
22.3	Risks due to processing and utilization of organic wastes	462
22.4	Prevention of occupational risks	466
22.5	Hygienic safety of products	468
22.6	Strategies for validation of the organic solid waste treatment process	469
22.7	Supervision of the final product	475
22.8	Restrictions in the use of the final product	478
22.9	Conclusive summary	478
	References	479
23.	Remediation technologies for conversion of heavy metal polluted organic wastes into compost	483
	<i>A. Veeken</i>	
23.1	Introduction	483
23.2	Remediation technologies	486
23.3	Case studies	493
23.4	Conclusions	498
	References	499
24.	Odour monitoring within solid waste management	502
	<i>P. Hobbs</i>	
24.1	Introduction	502
24.2	Odour sources and physical factors	503
24.3	Factors affecting emission rates	506
24.4	Odour measurement	507
24.5	Case study – better quality compost	509
24.6	Conclusion	511
	References	511
	Index	513
