

A 4-VOLUME SET

BIOMECHANICAL SYSTEMS TECHNOLOGY

CARDIOVASCULAR SYSTEMS

CORNELIUS T LEONDES

EDITOR

CONTENTS

Preface	v
Chapter 1 A Simulation Study of Hemodynamic Benefits and Optimal Control of Axial Flow Pump-Based Left Ventricular Assist Device	1
<i>Hwiting Qiao, Jing Bai and Ping He</i>	
Chapter 2 Techniques in Visualization and Evaluation of the <i>In Vivo</i> Microcirculation	29
<i>Shigeru Ichioka</i>	
Chapter 3 Impedance Cardiography: Development of the Stroke Volume Equations and their Electrodynamic and Biophysical Foundations	49
<i>Donald Philip Bernstein and Hendrikus J. M. Lemmens</i>	
Chapter 4 Indicator Dilution Techniques in Cardiovascular Quantification	89
<i>Massimo Mischi, Zaccaria Del Prete and Hendrikus H. M. Korsten</i>	
Chapter 5 Analyzing Cardiac Biomechanics by Heart Sound	157
<i>Andreas Voss, R. Schroeder, A. Seeck and T. Huebner</i>	
Chapter 6 Methods in the Analysis of the Effects of Gravity and Wall Properties in Blood Flow Through Vascular Systems	207
<i>S. J. Payne and S. Uzel</i>	
Chapter 7 Numerical and Experimental Techniques for the Study of Biomechanics in the Arterial System	233
<i>Thomas P. O'Brien, Michael T. Walsh, Liam Morris, Pierce A. Grace, Eamon G. Kavanagh and Tim M. McGloughlin</i>
