GLASS DEFECTS

PRÁH

CONTENTS

1. Introductory chapter (*Miloslav Bartuška*) 19

2. Methods used for the identification of defects 22

2.1 Introduction *(Miloslav Bartuška)* 22

2.2 Basic identification methods 23

2.2.1 Optical microscopy *(Miloslav Bartuška)* 23

2.2.1.1 Polarising microscope and its accessories 24

2.2.1.2 Working procedures 31

A. Measurement in transmitted polarised light 32

A a. Microstructure and morphological properties 32

A b. Optical properties 34

B. Measurement under crossed polars 36

B a. Morphological properties 36

B b. Optical properties 37

C. Measurement in reflected light 40

2.2.1.3 Sampling and specimens for the microscopic identification of defects 41

2.2.1.4 Assessment of the optical microscopy 45

2.2.1.5 References to Chapter 2.2.1 47

2.2.2 X-ray micro-analysis *(Václav Hulínský)* 47

2.2.2.1 Description of the method 47

2.2.2.2 Principle of the apparatus 49

2.2.2.3 Comparison of the WDS and EDS x-ray micro-analysers 52

2.2.2.4 Sensitivity limits of WDS and EDS spectrometers 55

2.2.2.5 Preparation of specimens for measurements . . . 59

2.2.2.6 References to Chapter 2.2.2 60

2.2.3 Methods applied to the analysis of gases contained in bubbles *(Jiří Ullrich)* 61

2.2.3.1 Introduction 61
2.2.3.2 Mass spectrometry 62
2.2.3.2.1 Principle of the method 62
2.2.3.2.2 Instrumentation 64
2.2.3.3 Gas chromatography 69
2.2.3.4 References to Chapter 2.2.3 72
2.3 Complementary identification methods 73
2.3.1 X-ray diffraction analysis *(Petr Exnar)* 73
2.3.2 X-ray fluorescence analysis *(Petr Exnar)* 78
2.3.3 Methods of atomic optical spectrometry *(Leoš Bauer)* ... 80
2.3.3.1 Principle and classification of the methods of atomic optical spectroscopy 80
2.3.3.2 Atomic absorption spectrometry 80
2.3.3.3 Atomic emission spectrometry 83
2.3.3.4 Atomic fluorescence spectrometry 88
2.3.3.5 Conclusion 90
2.3.4 Polarimetry (*Petr Exner*) 91
2.3.5 Method applied to the determination of gases dissolved in glasses *(Jaroslav Kloužek)* 94
2.3.6 Measurement of the concentration of dissolved oxygen *(Jaroslav Kloužek)* 97
2.3.7 Reference to Chapters 2.3.1 - 2.3.6 99
2.3.8 Electron microscopy (ESCA) *(Martin Maryška)* 100
2.3.8.1 Principle of the method 100
2.3.8.2 Spectra measurement and evaluation 101
2.3.8.3 References to Chapter 2.3.8 102
2.3.9 Visualisation of the cords in the glass by 3-dimensional filtration of their images *(Miloslav Ohlídal)* 102
2.3.9.1 Introduction 102
2.3.9.2 Experimental assembly 105
2.3.9.3 Principle of the method 106
2.3.9.4 References to Chapter 2.3.9 111

3. Crystalline inclusions – stones 112
3.1 Introduction (including Table 3 - I and 3 - II) *(Miloslav Bartuška)* 112

Tab. 3 – 1 Optical and physical properties of crystalline phases forming and accompanying stones 114
Tab. 3 – 2 Formation of crystalline phases in stones 123

3.2 Stones from refractories *(Miloslav Bartuška)* 132
3.2.1 Contribution of refractory to the stone formation
Stones originated in contact with the glass melt and above the glass level.
Primary and secondary phases 132
3.2.2 Stones from silicate materials 136
3.2.2.1 Silica 136
Phase composition and microstructure of silica 136
Changes in the phase composition and microstructure of silica as a consequence of its use 138
Stones originated from the silica refractories and silica mortars 140
3.2.2.2 Fused silica products and stones originating from such materials 160
3.2.3 Stones from alumino-silicate materials 169
3.2.3.1 Fireclay refractory 169
Phase composition and microstructure of fireclay refractory 169
Changes in the phase composition and microstructure of firebricks due to corrosion .. 171
Stones from fireclay refractory 176
Stones from ceramic rings and pot inserts 180
3.2.3.2 High-alumina refractories 212
High-alumina refractory materials composed of clay raw materials enriched with corundum 213
Stones from high-alumina refractories composed of clay raw materials enriched with corundum 216

High-alumina refractories composed of natural raw materials of the sillimanite type 216
Stones from sillimanite refractories 219
High-alumina refractories composed of man-made mullite 219
Stones from refractories composed of man-made mullite 225
3.2.4 Stones from materials composed of Al_2O_3 256
3.2.4.1 Refractories composed of granular corundum . 256
3.2.4.2 *Sintered corundum ceramics* 257
3.2.4.3 Fused cast refractories containing corundum and β-Al_2O_3 produced by melt crystallisation 257
3.2.5 Stones from alumina-zirconia-silicate refractory (AZS) . 270
3.2.5.1 Sintered AZS refractories 270
Stones from sintered AZS refractories 273
3.2.5.2 *Fused-cast corundum-baddeleyite refractories* 289
Stones from fused-cast corundum-baddeleyite refractories 295
3.2.6 Stones from zirconia-silicate (zircon) refractories 3 16
3.2.7 Stones from refractories composed of ZrO_2 333
3.2.8 Stones from Cr_2O_3-containing refractories 337
3.2.8.1 Sintered chrome-corundum refractories 337
3.2.8.2 Sintered materials composed of Cr_2O_3 338
3.2.8.3 Fused-cast chrome-corundum-baddeleyite refractories (CAZS) 339
3.2.8.4 Fused-cast chrome-corundum-spinel refractories 341

3.3 Stones originated from the batch

(Miloslav Bartuška) 355
3.3.1 Stones from imperfectly melted sand 355
3.3.2 Stones from accessory minerals in sand 371
3.3.3 Stones from aluminium hydrate 379
3.3.4 Stones from contaminated batch 384
3.3.5 Stones caused by an inhomogeneous distribution of raw materials containing components characterised by a low solubility in molten glass 397

3.4 Stones caused by glass crystallisation (devitrification products) *(Miloslav Bartuška)* 399
3.4.1 β-cristobalite 401
3.4.2 γ-tridymite 402
3.4.3 Devitrite 403
3.4.4 β-wollastonite 403
3.4.5 Diopside 404
3.4.6 Other products of glass crystallisation 405
α-wollastonite 405
Di-sodium-di-calcium tri-silicat 405
Anorthite 406
Sanbornite 406
Alamosite 406
3.4.7 Condensates in inclusions 406
3.5 References to Chapters 3.1 to 3.4 425
3.6 Inclusions caused by metals and reduced glass components *(Jiří Matěj)* 426
3.6.1 Inclusions containing molybdenum and elemental metals formed on molybdenum by reduction 428
3.6.2 Inclusions caused by platinum components 432
3.6.3 Inclusions created by the reduction of glass components by batch impurities 433
3.6.4 Survey of inclusions caused by metallic materials and reduced glass components. Identification of possible causes of their origin 435
3.6.5 References to Chapter 3.6 437

4. Glassy inhomogeneities – cords and layers *(Václav Hulínský)* 438
4.1 Cord definition and sources 438
4.2 Spectral methods 440
4.3 Origin of various types of cords 440
4.3.1 Cords originating in the batch 441
4.3.2 Cords originating from refractory 441
4.3.3 Cords originating from the furnace crown 442
4.3.4 Cords generated by stones 442
4.3.5 Cords due to a layered structure of the glass melt 443

4.3.6 Cords due to temperature fluctuations in the furnace 443
4.3.7 Cords released from the furnace bottom 444
4.3.8 Cords due to local changes in temperature 444
4.4 *Inhomogeneities in the glass melt* 446
4.4.1 Definition of the term "glass homogeneity" 446
4.4.2 *Batch homogeneity* 447
4.4.3 Furnace atmosphere as a cause of cords 448
4.4.4 Glass evaporation as a possible source of cords 450
4.4.5 Cullet behaviour in the glass melt 451
4.4.6 Refractory dissolution and tank wall corrosion 451
4.4.7 Corrosion of the furnace superstructure 453
4.4.8 Corrosion of the furnace crown 453
4.4.9 Hidden cords (*Jiří Bubeník*) 454
4.5 References to Chapter 4 457

5. Gaseous inhomogeneities in the glass – bubbles *(Lubomír Němec)* 459
5.1 Introduction 459
5.2 Gas equilibria in the glasses 461
5.2.1 Origin of gases and the type of their solubility in the glass melts 461
5.2.2 Physical solubility of gases in the glasses 463
5.2.3 Chemical solubility of gases in the glass melts 465
5.2.3.1 Chemical solubility of water vapour 466
5.2.3.2 *Chemical solubility of hydrogen* 468
5.2.3.3 Chemical solubility of *carbon dioxide* 468
5.2.3.4 Chemical solubility of sulfur dioxide 470
5.2.3.5 Chemical solubility of nitrogen 475
5.2.3.6 Chemical solubility of oxygen 476
5.2.4 Gas diffusion in glasses 482
5.3 Kinetics of bubble behaviour in glasses 486
5.3.1 Ascendance speed of a single bubble in a static isothermal glass melt 487
5.3.2 Bubble growth and dissolution in glass melts 488
5.3.3 Effect of temperature, pressure and glass composition on the rate of bubble elimination 498

5.3.3.1 Effect of temperature 499
5.3.3.2 Effect of pressure 500
5.3.3.3 Effect of composition 500
5.3.3.3.1 Effect of the concentration of the fining agent 501
5.3.3.3.2 Effect of major glass components 502
5.3.3.3.3 Effect of the redox state of the glass melt 503
5.3.4 Bubble behaviour in a very viscous and solid glass 504
5.3.5 Results of the mathematical and experimental investigation of bubbles in molten glasses 505
5.3.5.1 Development in the bubble dimension 506
5.3.5.2 Development in the bubble composition 510
5.3.5.3 Influence of the glass melting factors on the time needed for bubbles to rise to the surface 513
5.3.6 Kinetics of the bubble behaviour in glasses. Summary 519
5.4 Typical properties of the sources and bubbles generated by them 522
5.4.1 Bubbles generated by decomposition and other reactions of raw materials 523
5.4.2 Bubbles generated by the nucleation or by growth *of the nuclei as a result of melt oversaturation* with gases 527
5.4.3 Bubbles produced by chemical reactions 535
5.4.3.1 Reactions of molten glass with solid impurities 535
5.4.3.2 Reactions of molten glass with liquid impurities 540
5.4.4 Bubbles generated by electrochemical reactions 542
5.4.5 Bubbles generated in a mechanical way 548
5.4.5.1 Bubbles due to the entrapment or introduction of the surrounding atmosphere 548
5.4.5.2 Bubbles generated by refractories 550
5.4.5.3 Bubbles resulting from the use of cooling water 555

5.5 Systemic approach to the identification of bubble sources in the melting process 555
5.5.1 Conditions required for modelling bubble sources and bubble history during glass melting 558
5.5.2 General features characterising the behaviour of multi-component bubbles important for the identification of their sources 561
5.5.3 Characteristic features of bubble analyses 572
5.5.4 Qualitative knowledge base of most current bubble sources based on their analyses 573
5.5.5 Identification of bubble sources with the aid of analyses of bubble sets 574
5.5.6 Application of other features to the identification of bubble sources 579
5.5.7 Application of the bubble features within the framework of an experimental automatic identification system 580
5.5.8 Application of the mathematical modelling within the automatic identification system 586
5.6 Conclusion 590
5.7 List of symbols 593
5.8 References to Chapter 5 596

6. Strategy adopted during the fight against glass defects
(Jiří Bubeník, Hana Nováková, Antonín Smrček) 600

Index 637
