Part I CAD—Fundamentals of Design, Computers and Controllers

1. FUNDAMENTALS OF CAD	3–19
1.1 Introduction	3
1.2 The CAD System—Definition	3
1.3 Reasons for Implementing CAD	4
1.4 Design Process	4
1.4.1 Shigley Model	5
1.4.2 Pahl and Beitz Model	6
1.4.3 Ohsuga Model	8
1.4.4 Earle Model	9
1.5 Application of Computers in Design	14
1.5.1 Geometric Modelling	14
1.5.2 Engineering Analysis	15
1.5.3 Design Review and Evaluation	16
1.5.4 Automated Drafting	16
1.6 Benefits of Computer Aided Design	17
1.7 Creating the Manufacturing Database	18
<i>Review Questions</i>	<i>19</i>
2. COMPUTER SYSTEMS	20–39
2.1 Introduction	20
2.2 Hardware Components	20
2.2.1 Central Processing Unit	20
2.2.2 Memory	22
2.2.3 Memory—ROM and RAM	24

2.3	Mass Storage Devices	26
2.4	Input/Output Devices	29
2.5	Programming Languages	33
2.6	Operating System	35
2.7	System Configuration	36
	<i>Review Questions</i>	39

Part II CAD—Hardware and Software Components

3. USE OF COMPUTERS IN CAD/CAM SYSTEM

43–72

3.1	Introduction	43
3.2	Microcomputer Based Systems	44
3.2.1	Overview of Microcomputer Systems	45
3.2.2	Microcomputer Instructions	48
3.3	Minicomputer Based Systems	49
3.3.1	Minicomputer Instructions	50
3.4	Mainframe-based Systems	51
3.5	Supercomputers	53
3.5.1	Defining a Supercomputer	53
3.5.2	Why do We Need Supercomputers?	55
3.5.3	How do Supercomputers Achieve Their Speed?	58
3.5.4	Applications of Supercomputers	59
3.6	Programmable Logic Controller	61
3.6.1	Components of a PLC	62
3.6.2	Open PLC Systems	63
3.6.3	The IEC 1131-3 Programming Standard	64
3.7	Manufacturing and Assembly Processes	69
3.8	Advantages and Disadvantages of PLC	69
	<i>Review Questions</i>	72

4. CAD SYSTEM HARDWARE

73–91

4.1	Introduction	73
4.2	The Design Workstation	74
4.3	Graphics Terminal	74
4.3.1	Image Generation in Computer Graphics	74
4.4	Graphics Terminals for CAD	76
4.4.1	Directed Beam Refresh Tube (DBRT)	76
4.4.2	Direct View Storage Tube (DVST)	77
4.4.3	Raster Scan Terminals (Digital TV)	77
4.5	Graphics Input Devices	78
4.5.1	Cursor Control Devices	79
4.5.2	Digitizers	82
4.5.3	Keyboard Terminals	82

4.6	Graphics Output Devices	83
4.6.1	Pen Plotters	83
4.6.2	Hardcopy Unit	85
4.6.3	Electrostatic Plotters	86
4.6.4	Computer-Output-to-Microfilm (COM) Units	86
4.7	Modes of Operation	87
4.7.1	Hard Copy Mode	87
4.7.2	On-line Mode	87
4.7.3	Off-line Mode	88
4.7.4	Remote Mode	88
4.8	CAD System Configuration	88
	<i>Review Questions</i>	90

5. CAD SYSTEM SOFTWARE

92–116

	Introduction	92
5.1	Graphics Software	93
5.1.1	The Software Configuration of a Graphics System	94
5.2	Functions of a Graphics Package	95
5.2.1	Generation of Graphic Elements	95
5.2.2	Transformations	96
5.2.3	Display Control and Windowing Functions	96
5.2.4	Segmenting Functions	96
5.2.5	User Input Functions	97
5.3	Constructing the Geometry	97
5.3.1	The Use of Graphics Elements	97
5.3.2	Defining the Graphic Elements	98
5.3.3	Editing the Geometry	99
5.4	Operating System	100
5.5	Software Modules	101
5.5.1	Operating System Module	101
5.5.2	Graphics Module	101
5.5.3	Applications Module	101
5.5.4	Programming Module	102
5.5.5	Communications Module	102
5.6	Graphics Standards	102
5.7	Standards for Graphics Programming	102
5.7.1	Features of GKS	103
5.7.2	GKS-3D	103
5.7.3	Programmers Hierarchical Interactive Graphics Standard (PHIGS)	103
5.7.4	Initial Graphics Exchange Specification (IGES) Graphics Standard	104
5.8	Product Data Based Format	106
5.9	Standard for the Exchange of Product Model Data (STEP)	107
5.10	Drawing Exchange Format (DXF)	111
5.11	DMIS	112

5.12	Parasolid	112
5.12.1	Modelling Functionalities of Parasolid	113
5.12.2	Applications	114
5.13	ACIS	115
5.13.1	ACIS Architecture	115
	<i>Review Questions</i>	116

6. PRINCIPLES OF INTERACTIVE COMPUTER GRAPHICS

117–140

	Introduction	117
6.1	Graphic Primitives	118
6.1.1	Point Plotting	118
6.1.2	Drawing of Lines	118
6.2	Line Drawing Algorithms	119
6.2.1	DDA Algorithm	120
6.2.3	Bresenham's Line Algorithm	121
6.2.4	Bresenham's Line-Drawing Algorithm for $ m < 1$	123
6.3	Bresenham's Circle Algorithm	124
6.3.1	Properties of Circles	124
6.4	Ellipse-Generating Algorithms	126
6.5	Scan Conversion	128
6.6	Rendering	130
6.6.1	Rasterizing Polygons	131
6.6.2	Hidden Surface Elimination	132
6.7	Z-buffer Algorithm	133
6.7.1	Scan Line Z-buffer Algorithm	133
6.8	Antialiasing	134
6.8.1	Super Sampling or Post Filtering	134
6.8.2	Area Sampling or Prefiltering	135
6.8.3	Pixel Phasing	135
6.8.4	Stochastic Sampling	135
6.9	Reflection	135
6.10	Shading	138
6.10.1	Gouraud Shading	138
6.10.2	Phong Shading	139
	<i>Review Questions</i>	140

7. TRANSFORMATION SYSTEMS

141–156

	Introduction	141
7.1	Transformation Principles	141
7.2	Two-Dimensional Geometric Transformations	141
7.2.1	Scaling	142
7.2.2	Translation	142
7.2.3	Rotation	143

7.3	Three-dimensional Geometric Transformations	144
7.3.1	Scaling	145
7.3.2	Translation	145
7.3.3	Rotation	146
7.4	Linear Transformations	147
7.5	Display	149
7.6	Windowing and Clipping	150
7.7	Display Files for Three-dimensional Data	150
7.8	Visualization of Three-dimensional Data	151
7.8.1	Perspective Transformation	152
7.8.2	Brightness Modulation	153
7.8.3	Hidden-line removal	153
7.8.4	Shading	153
7.8.5	Movement	154
	<i>Review Questions</i>	154
	<i>Practice Problems</i>	155

8. WIRE FRAME MODELLING

157–186

	Introduction	157
8.1	Importance of Geometric Modelling	157
8.2	Requirements of Geometric Modelling	157
8.3	Types of Models	158
8.3.1	Wire Frame Modelling	158
8.3.2	Surface Modelling	159
8.3.3	Solid Modelling	160
8.4	Wire Frame Entities	161
8.5	Representation of Curves	161
8.6	Design of Curved Shapes	163
8.7	Analytic Curves	164
8.8	Parametric Representation of Analytic Curves	164
8.8.1	Line	164
8.8.2	Circles	165
8.8.3	Ellipse	167
8.8.4	Parabola	169
8.8.5	Hyperbola	171
8.9	Synthetic Curves	172
8.10	Parametric Representation of Synthetic Curves	173
8.10.1	Cubic Spline Curves	174
8.10.2	Bezier Curves	176
8.10.3	B-spline Curves	177
8.11	Limitations of Wire Frame Modelling	178

8.12	Curve Fitting Techniques	179
8.12.1	Displaying	179
8.12.2	Blending	179
8.12.3	Segmentation	180
8.12.4	Trimming	181
8.12.5	Intersection	182
8.12.6	Transformation	183
	<i>Review Questions</i>	183
	<i>Practice Problems</i>	183

9. SURFACE MODELLING

187–207

	Introduction	187
9.1	Surface Modelling	187
9.2	Surface Entities	188
9.2.1	Plane Surface	188
9.2.2	Ruled (Lofted) Surface	188
9.2.3	Surface of Revolution	189
9.2.4	Tabulated Cylinder	189
9.2.5	Swept Surface	190
9.2.6	Sculptured or Curve-mesh Surface	190
9.2.7	Bezier Surface and B-spline Surface	190
9.2.8	Coons Patch	191
9.2.9	Fillet Surface	191
9.2.10	Offset Surface	191
9.3	Parametric Representation of Analytic Surfaces	191
9.3.1	Plane Surface	192
9.3.2	Ruled Surface	195
9.3.3	Surface of Revolution	196
9.3.4	Tabulated Cylinder	197
9.4	Surface Representations	198
9.4.1	Implicit Equation	198
9.4.2	Explicit Equation	199
9.5	Parametric Equation of a Surface	199
9.6	Surface Representation Scheme	200
9.6.1	NURBS	200
9.6.2	B-splines	201
9.7	Techniques for Surface Modelling	201
9.7.1	The Surface Patch	201
9.7.2	The Coons Patch	202
9.7.3	Bicubic Patch	202
9.7.4	Bezier Surfaces	203
9.7.5	B-spline Surfaces	204
9.8	Limitations	205
	<i>Review Questions</i>	205
	<i>Practice Problems</i>	206

- Introduction 208
- 10.1 Solid Modelling 208
- 10.2 Solid Entities 209
- 10.3 Solid Modelling Techniques for Volume Modelling 212
- 10.4 Boundary Representation 212
 - 10.4.1 Basic Entities for BREP 213
 - 10.4.2 Validation of BREP Model Using Euler's Law 213
- 10.5 Constructive Solid Geometry 214
 - 10.5.1 Solid Entities (Primitives) 214
 - 10.5.2 Half-spaces 215
 - 10.5.3 Regularized Set Operations and Their Geometric Meaning 217
- 10.6 Sweep Representation 218
- 10.7 Primitive Instancing Method 219
- 10.8 Cell Decomposition Scheme 220
 - 10.8.1 Simple Regular Grid 220
 - 10.8.2 Octree Adaptive Grid 220
- 10.9 Analytical Solid Modelling 221
- 10.10 Comparison of Various Solid Modelling Schemes 222
- Review Questions* 223
- Practice Problems* 224

Part III CAD—Design Aspects of Industrial Components

- Introduction 227
- 11.1 General Procedure for Finite Element Analysis 227
- 11.2 Mesh Generation Techniques 229
- 11.3 Automatic Mesh Generation 230
- 11.4 Mesh Requirements 231
- 11.5 Three-dimensional Shape Description and Mesh Generation 232
- 11.6 Natural Coordinates 234
 - 11.6.1 One-dimensional Elements 234
 - 11.6.2 Two-dimensional Triangular Elements 235
 - 11.6.3 Three-dimensional Tetrahedron Elements 237
- 11.7 Isoparametric Elements 238
 - 11.7.1 Rectangular Elements 239
 - 11.7.2 Quadrilateral Elements 239
 - 11.7.3 Hexahedron Elements 240
- 11.8 CAD Application to FEM 241
- 11.9 Finite Element Modelling 242
 - 11.9.1 Pre-processing 242
 - 11.9.2 Processing 242
 - 11.9.3 Post-processing 243
 - 11.9.4 Mesh Generation 243

11.10	General Structure of a Finite Element Analysis Procedure	243
11.10.1	Pre-processing Module	244
11.10.2	Pre-processing from CAD Model	245
11.10.3	Procedure for Creation of Finite Element Model from Solid Model	246
11.10.4	Use of Neutral Files	247
11.10.5	Analysis	247
11.10.6	Post-processor	247
	<i>Review Questions</i>	248
	<i>Practice Problems</i>	248

Part IV CAM—Numerical Control Production Systems

12. NUMERICAL CONTROL IN PRODUCTION SYSTEMS 255–266

Introduction	255
12.1	What is Numerical Control? 255
12.2	The NC Procedure 256
12.3	NC Coordinate Systems 257
12.3.1	Fixed Zero and Floating Zero 258
12.3.2	Absolute Positioning and Incremental Positioning 259
12.4	Elements of NC System 259
12.4.1	Machine Control Unit 259
12.4.2	Part Program 260
12.4.3	Machine Tool 260
12.5	Classification of NC Systems 261
12.5.1	Point-to-Point 261
12.5.2	Straight-cut NC 261
12.5.3	Continuous Path 262
12.5.4	Absolute Programming 262
12.5.5	Incremental Programming 263
12.5.6	Open-loop and Closed-loop System 263
12.6	Advantages of NC Systems 264
12.7	Disadvantages of NC Systems 265
	<i>Review Questions</i> 265

13. COMPUTER CONTROL OF NC MACHINES 267–285

Introduction	267
13.1	What is Computer Numerical Control? 267
13.2	Functions of CNC 268
13.2.1	Machine Tool Control 268
13.2.2	In-process Compensation 269
13.2.3	Diagnostics 270
13.3	Features of CNC 270
13.4	Advantages of CNC 273
13.5	Industrial Applications of CNC 273

- 13.6 DNC Concepts 274
- 13.7 Objectives of DNC 274
- 13.8 Components of DNC System 275
- 13.9 Types of DNC 276
 - 13.9.1 Behind the Tape Reader System (BTR) 276
 - 13.9.2 Special Machine Control Unit 277
- 13.10 Advantages of DNC 277
- 13.11 Adaptive Control 278
- 13.12 Tool Wear Sensing 279
 - 13.12.1 Feedback from the Tool 279
 - 13.12.2 Feedback from the Work Piece 280
 - 13.12.3 Feedback from the Cutting Process 280
- 13.13 Adaptive Control Machining 281
 - 13.13.1 ACC Type of Adaptive Control 282
 - 13.13.2 ACO Type of Adaptive Control 283
- 13.14 Benefits of Adaptive Control Machining 283
- Review Questions 284*

14. NC PART PROGRAMMING AND COMPUTER AIDED PART PROGRAMMING

286-349

Introduction 286

- 14.1 Manual Part Programming 287
 - 14.1.1 The Punched Tape in NC 288
 - 14.1.2 Tape Coding and Format 288
 - 14.1.3 Sequence Number 292
 - 14.1.4 Preparatory Function 292
 - 14.1.5 Feed Rate Function, F 292
 - 14.1.6 Miscellaneous Function 'M' 293
 - 14.1.7 Spindle Speed Function 'S' 295
 - 14.1.8 Tool Change Function 'T' 295
 - 14.1.9 Dimensional Words 295
 - 14.1.10 Interpolation 297
 - 14.1.11 Fixed Cycles 298
 - 14.1.12 Canned Cycles 298
 - 14.1.13 Tool Offset 300
 - 14.1.14 Tool Length Compensation 300
 - 14.1.15 Tool Nose Radius Compensation 301
- 14.2 Computer Assisted Part Programming 302
- 14.3 Computer Assisted NC Part Programming Languages 303
- 14.4 APT Language 303
 - 14.4.1 Geometry Statements 304
 - 14.4.2 Motion Statements 305
 - 14.4.3 Post-processor Statements 308
 - 14.4.4 Auxiliary Statements 308

14.5	NC Part Programming Using CAD/CAM	308
14.6	Tool Path Generation Using CAD/CAM	309
14.7	Computer-Automated Part Programming	310
14.8	Technology of CAM	311
14.9	How Computer Assisted Programming Systems Work?	313
	<i>Review Questions</i>	334
	<i>Practice Problems</i>	335

Part V Information Systems in Manufacturing

15. GROUP TECHNOLOGY

353–373

	Introduction	353
15.1	Part Families	353
15.2	Parts Classification and Coding Systems	354
15.3	Coding Method	355
15.4	Codes and Coding System Structure	355
	15.4.1 Monocode or Hierarchical Code	356
	15.4.2 Polycode	356
	15.4.3 Mixed Code	357
15.5	Opitz Classification and Coding System	358
15.6	KK-3 System	358
15.7	The MICLASS System	362
15.8	Multiclass	362
15.9	How GT is Applied	363
15.10	Production Flow Analysis (PFA)	364
15.11	Group Technology Machine Cells	366
15.12	Organization	366
15.13	Classification and Coding Systems	366
15.14	Code	367
15.15	Component Classification	368
15.16	Specific Classification Systems	369
15.17	Facilities Layout	371
15.18	Advantages	371
15.19	Limitations	372
15.20	Guidelines for Implementing GT	372
	<i>Review Questions</i>	373

16. COMPUTER AIDED PROCESS PLANNING

374–384

	Introduction	374
16.1	Computer Aided Process Planning	374
16.2	Retrieval Type CAPP System	375
16.3	Generative CAPP System	377
16.4	Hybrid CAPP System	378

16.5	Process Planning Systems	379
16.5.1	CAM-I CAPP	379
16.5.2	MIPLAN and MULTICAPP	379
16.5.3	APPAS and CAD/CAM	380
16.5.4	AUTOPLAN	380
16.5.5	AUTAP System	380
16.5.6	CPPP	380
16.5.7	GARI	380
16.5.8	TIPPS	380
16.6	Machinability Data Systems	381
16.7	Benefits of CAPP	383
16.8	Computer Programming Languages for CAPP	383
	<i>Review Questions</i>	384

Part VI Quality Control and Automated Inspection

17. COMPUTER-AIDED INSPECTION AND QUALITY CONTROL

387-400

	Introduction	387
17.1	Quality Assurance and Quality Control (QA-& QC)	387
17.2	Inspection and Testing	388
17.2.1	QC Inspection	388
17.2.2	QC Testing	388
17.3	Coordinate Measuring Machine	389
17.3.1	CMM Construction	389
17.3.2	<i>Principle of CMM</i>	392
17.4	Operation and Programming	393
17.5	Specifications of a CMM	394
17.6	Advantages of CNC Operation of CMM	395
17.7	CMM Benefits and Trends	395
17.8	Limitations of CMM	396
17.9	Optical Inspection Methods	396
17.9.1	Machine Vision System	396
17.9.2	Scanning Laser Beam Device	397
17.9.3	Photogrammetry	397
17.10	Non-Contact, Non-Optical Inspection Methods	398
17.11	Computer Aided Testing (CAT)	399
	<i>Review Questions</i>	400

18. MACHINE VISION

401-412

	Introduction	401
18.1	Imaging Devices	402
18.1.1	Videcon Tube Camera	402
18.2	Analog to Digital Conversion	404

- 18.3 Image Processing and Analysis 405
 - 18.3.1 Image Data Reduction 405
 - 18.3.2 Segmentation 406
 - 18.3.3 Feature Extraction 408
 - 18.3.4 Object Recognition 410
- 18.4 Application 411
- Review Questions 411

Part VII Integration of Manufacturing Systems

19. COMPUTER INTEGRATED PRODUCTION PLANNING SYSTEMS

415–443

- Introduction 415
- 19.1 Production Planning and Control 416
 - 19.1.1 Aid of Computers in PPC 418
- 19.2 Master Production Schedule 419
 - 19.2.1 Functions of Master Production Schedule 419
 - 19.2.2 Basic Inputs to MPS 420
 - 19.2.3 The Basic MPS Maintenance Step 420
 - 19.2.4 MPS Guidelines 421
 - 19.2.5 Determining Master Schedule Requirements 422
- 19.3 Material Requirement Planning (MRP) 422
 - 19.3.1 Basic MRP Concepts 422
 - 19.3.2 Structure of a MRP System 423
 - 19.3.3 Working of MRP 425
 - 19.3.4 Computers in MRP 425
 - 19.3.5 MRP Systems 426
 - 19.3.6 MRP Database 426
 - 19.3.7 MRP Output Reports 426
 - 19.3.8 Benefits of MRP 427
 - 19.3.9 Classes of MRP Users 427
- 19.4 Capacity Requirement Planning (CRP) 428
 - 19.4.1 CRP Input 428
 - 19.4.2 CRP Output 430
- 19.5 Inventory Control 431
- 19.6 Computerized Inventory Management System 431
- 19.7 Manufacturing Resource Planning (MRP II) 432
- 19.8 Just in Time 435
- 19.9 Shop Floor Control 436
 - 19.9.1 Order Release 437
 - 19.9.2 Order Scheduling 438
 - 19.9.3 Order Progress 439

- 19.10 Functions of Shop Floor Control 439
 - 19.10.1 Priority Control and Assignment of Shop Orders 440
 - 19.10.2 Maintain Information on Work-in-Process 440
 - 19.10.3 Monitor Shop Order Status 440
 - 19.10.4 Production Output Data for Capacity Control 441
- 19.11 Computer Process Monitoring 441
 - 19.11.1 Data Logging Systems 441
 - 19.11.2 Data Acquisition Systems 442
 - 19.11.3 Multilevel Scanning 442
- Review Questions 443*

20. INDUSTRIAL ROBOTS AND AUTOMATED GUIDED VEHICLE SYSTEMS 444–482

- Introduction 444*
- 20.1 Structure and Operation of Robots 445
 - 20.1.1 Controller 445
 - 20.1.2 Manipulator 446
 - 20.1.3 Tooling 447
 - 20.1.4 Sensory Devices 448
- 20.2 Robot Anatomy 451
- 20.3 Robot Specifications 454
- 20.4 Types of Robots 457
- 20.5 Robot Technology Levels 457
- 20.6 Common Robot Configurations 458
- 20.7 Classification of Robots 459
- 20.8 Programming Robots 461
- 20.9 Programming Methods 461
- 20.10 Robot Programming Functions 462
- 20.11 Basic Types of Robot Programming Languages 463
- 20.12 Robot Applications 465
- 20.13 Industrial Applications 466
 - 20.13.1 Material Handling 466
 - 20.13.2 Processing Applications 468
 - 20.13.3 Assembly Applications 470
 - 20.13.4 Inspection Applications 471
- 20.14 Non-Industrial Applications 472
- 20.15 Automated Guided Vehicle Systems 473
- 20.16 Types of AGVs 473
 - 20.16.1 Driverless Trains 473
 - 20.16.2 AGVs Pallet Trucks 474
 - 20.16.3 AGVs Unit Load Carriers 474
- 20.17 Applications 475
- 20.18 Functions of AGVs 476
 - 20.18.1 Vehicle Guidance and Routing 476
 - 20.18.2 Traffic Control and Safety 478
 - 20.18.3 System Management 479

Review Questions 481

Introduction	483
21.1 Components of FMS	484
21.2 Types of FMS Systems	485
21.3 Flexibility in FMS	487
21.4 Building Blocks of FMS	488
21.5 Machining System of FMS	491
21.5.1 Horizontal Machining Centres	491
21.6 Tool Management Systems	492
21.6.1 Tool Coding Systems	493
21.6.2 Tool Supply Systems	494
21.6.3 Work and Tool Probing	495
21.6.4 Tool Monitoring Systems	498
21.6.5 Tool Management Systems	503
21.7 Work Piece Handling System	504
21.8 FMS Control	508
21.9 FMS Layout Configurations	511
21.10 FMS Modelling and Analysis	513
21.10.1 Mathematical Programming	513
21.10.2 Queuing Network	514
21.10.3 Markov Model	514
21.10.4 Perturbation Analysis	514
21.10.5 FMS Simulation	515
21.10.6 Petri Nets and Its Applications in FMS Modelling	516
21.11 FMS Benefits	518
21.12 FMS Planning and Implementation Issues	519
21.12.1 FMS Planning and Design Issues	519
21.12.2 FMS Operational Issues	521
21.13 Applications of FMS	521
21.14 Automated Storage and Retrieval Systems (AS/RS)	522
21.14.1 Types of AS/RS	522
21.15 Automated Material Handling	524
21.16 Types of Material Handling Equipment	524
21.17 Selection of Material Handling Equipment	526
21.18 Principles of Material Handling (CIC MHE)	526
21.19 Conveyor Systems	527
21.19.1 Roller Conveyors	528
21.19.2 Skate-Wheel Conveyors	529
21.19.3 Belt Conveyors	529
21.19.4 Chain Conveyors	529
21.19.5 Slat Conveyors	530
21.19.6 Overhead Trolley Conveyors	530
21.19.7 In-floor Towline Conveyors	530
21.19.8 Cart-on-Track Conveyors	531
<i>Review Questions</i>	532

- Introduction 534
- 22.1 Components of CIM System 535
- 22.2 Types of Manufacturing Systems 536
- 22.3 Machine Tools and Related Equipment 540
- 22.4 Material Handling System 542
- 22.5 Computer Control System 545
 - 22.5.1 Functions of the Computer in a CIMS 545
 - 22.5.2 CIMS Data Files 547
 - 22.5.3 System Reports 548
- 22.6 Human Labour in the Manufacturing System 548
- 22.7 Computer-Integrated Manufacturing 549
 - 22.7.1 Part and Product Design 550
 - 22.7.2 Tool and Fixture Design 551
 - 22.7.3 Process Planning 551
 - 22.7.4 Programming 551
 - 22.7.5 Production Planning 552
 - 22.7.6 Machining 552
 - 22.7.7 Assembly 552
 - 22.7.8 Maintenance 553
 - 22.7.9 Quality Control 553
 - 22.7.10 Inspection 554
 - 22.7.11 Storage and Retrieval 554
- 22.8 Benefits of CIM 554
- 22.9 Lean Manufacturing 555
- 22.10 Agile Manufacturing 557
- 22.11 Reorganizing the Production System for Agility 557
- Review Questions* 560

Part VIII Intelligent CAD and Manufacturing Systems

- Introduction 563
- 23.1 Artificial Intelligence 563
 - 23.1.1 Expert Systems 564
 - 23.1.2 Natural-Language Processing 565
 - 23.1.3 Machine Vision 565
 - 23.1.4 Artificial Neural Networks 566
 - 23.1.5 Fuzzy Logic 567
- 23.2 Artificial Intelligence in CAD 567
- 23.3 Applications of AI in Design 569
- 23.4 Expert Systems 570
- 23.5 Structure of an Expert System 571

23.6	Development of an Expert System	572
23.6.1	Conceptual Framework	572
23.6.2	Development Steps	573
23.6.3	Expert System Package Development Cycle	574
23.7	Expert System Shells	575
23.8	Knowledge Representation	575
23.8.1	Production Rules	577
23.8.2	Decision Tables	578
23.8.3	Frames	578
23.8.4	Semantic Networks	578
23.8.5	Predicate Logic	580
23.8.6	Conventional Programs	580
23.9	Inference Engine	580
23.9.1	Forward Chaining	581
23.9.2	Backward Chaining	581
23.9.3	Hybrid Chaining	581
23.10	Role of Artificial Intelligence in Manufacturing	581
23.11	Characteristics of an Expert System	585
23.12	Languages for Expert Systems	585
23.13	Example of Expert Systems	586
23.14	Benefits of Expert System	586
	<i>Review Questions</i>	586

24. COMMUNICATION SYSTEMS IN MANUFACTURING

588–605

	Introduction	588
24.1	Communication Networks in Manufacturing	588
24.2	Hierarchy of Computers in Manufacturing	589
24.2.1	Levels in the Computer Hierarchy	590
24.2.2	Benefits of the Hierarchical Structure	591
24.3	Communications Standards	592
24.4	Manufacturing Communication Systems	594
24.4.1	Data Redundancy	595
24.4.2	Bottom-up Versus Top-down Approach to Design	595
24.4.3	Volume of Information	595
24.5	Internet	596
24.6	Intranet	597
24.7	Hardware Elements of a network	597
24.8	Networking in a Manufacturing Company	599
24.9	Issues in Inter-System Communication	600
24.9.1	Terminal Networking	600
24.9.2	File Sharing	600
24.9.3	Data Translation	600
24.9.4	Distributed Database	600

24.10	Fundamentals of Computer Communications	601
24.10.1	Data	601
24.10.2	Coding	601
24.10.3	Transmission	602
24.10.4	Error Detection	602
24.10.5	Modulation and Demodulation	603
24.10.6	Simplex and Duplex	603
24.10.7	Line Speed	603
24.10.8	Medium	604
	<i>Review Questions</i>	605

BIBLIOGRAPHY	607-611
GLOSSARY	613-639
QUESTION BANK (COMPUTER AIDED DESIGN)	641-650
QUESTION BANK (COMPUTER AIDED MANUFACTURING)	651-667
OBJECTIVE TYPE QUESTIONS	669-692
INDEX	693-698
