## **Part I Process Control Concepts**

<b>1 Introduction to Process Control Systems</b>	<b>3-99</b>
1.1 Introduction	3
1.2 Definition of Industrial Processes and Control	3
1.3 History of Process Control System	8
1.4 Some Examples of Process Control Systems	9
1.5 Block Diagram Representation of Process Control Systems	12
1.5.1 Components of a Process Control System	13
1.5.2 Transfer Functions of Control System	15
1.6 Process Dynamics	16
1.6.1 Resistance-type Processes	16
1.6.2 Capacitance-type Processes	18
1.6.3 Both Resistance and Capacitance-type Processes	19
1.6.4 Inertia-type Processes	19
1.6.5 Time-constant Processes	20
1.6.6 Instantaneous or Steady-state Processes	22
1.6.7 First-order Processes	23
1.6.8 Second-order Processes	25
1.6.9 Dead-time or Transport-delay Processes	28
1.7 Process Variables	29
1.8 Degrees of Freedom of a Process	30
1.9 Transfer Functions of Physical Systems	31
1.9.1 Mechanical Systems	31
1.9.2 Electrical Systems	35
1.9.3 Electromechanical Systems	40

1.10	Techniques for Process Control	44
1.10.1	Open-loop Control Systems	44
1.10.2	Closed-loop (or Feedback) Control Systems	45
1.10.3	Feed Forward Control Systems	48
1.10.4	Cascade Control System	50
1.10.5	Ratio Control Systems	52
1.10.6	Analog and Digital Control Systems	53
1.10.7	Linear and Nonlinear Control Systems	54
1.10.8	Computed Variable Control Systems	55
1.10.9	Override Control Systems	57
1.10.10	Optimizing Control Systems	58
1.11	Application-based Classification of Control Systems	61
1.11.1	Sequential Control System	61
1.11.2	Numerical Control Systems	62
1.11.3	Servo Control Systems	62
1.12	Process Control Actions (or Modes)	63
1.12.1	Some Definitions	63
1.12.2	Control Actions (or Modes)	64
1.13	Process Control Objectives	72
1.13.1	Safety	75
1.13.2	Environmental Protection	76
1.13.3	Equipment Protection	76
1.13.4	Smooth Plant Operation and Production Rate	77
1.13.5	Product Quality	77
1.13.6	Monitoring and Diagnosis	78
1.14	Benefits of Process Control Systems	78
1.15	Process Control Laws	78
1.16	Levels of Process Control System	79
	<i>Illustrative Examples</i>	80
	<i>Review Questions</i>	87
	<i>Self-Check Quiz</i>	95

## **2 Process Control Modelling.....100–180**

2.1	Introduction	100
2.2	Process Model	100
2.3	Physical Model	101
2.4	Control Model	103
2.5	Process Modelling	104
2.5.1	Uses of Process Models	106
2.5.2	Types of Process Models	107
2.6	Differential Equations	118
2.7	Difference Equations	119
2.8	Laplace Transform	120
2.8.1	Theorems on Laplace Transform	120
2.8.2	Inverse Laplace Transform	122
2.8.3	Laplace Transform of Elementary Functions	122

2.9	Transfer Function Representations	126
2.9.1	Features of Transfer Function	128
2.9.2	Block Diagram Representation	128
2.9.3	Linearization	130
2.10	Frequency-domain Modelling	132
2.11	Time-domain Modelling	134
2.11.1	State Variables Representation	135
2.11.2	State Differential Equation	136
2.11.3	State Variables and State Equations for a Chemical Process	137
2.12	<i>z</i> -Transform	139
2.12.1	Theorems on <i>z</i> -Transform	140
2.12.2	Inverse of <i>z</i> -Transform	141
2.12.3	<i>z</i> -Transform of Elementary Functions	142
2.13	Modelling Procedure	144
2.13.1	Goals Definition	146
2.13.2	Information Preparation	146
2.13.3	Model Formulation	147
2.13.4	Solution Determination	150
2.13.5	Results Analysis	152
2.13.6	Model Validation	154
	<i>Illustrative Examples</i>	155
	<i>Review Questions</i>	174
	<i>Self-Check Quiz</i>	179

### **3 Feedback Control System ..... 181–265**

3.1	Introduction	181
3.2	Basic Principles	182
3.3	Measuring Devices (Sensors)	186
3.3.1	Temperature Sensors	187
3.3.2	Pressure Sensors	188
3.3.3	Flow Sensors	189
3.3.4	Composition Analyzers	189
3.3.5	Transmission Lines	190
3.4	Final Control Elements	190
3.4.1	Control Valve	191
3.4.2	Actuators	198
3.5	Control Requirements of Feedback Control Systems	209
3.5.1	Accuracy and Steady-state Stability	210
3.5.2	Dynamic Behaviour	210
3.6	Calculation of Feedback Control in a Steady-state Condition	212
3.6.1	Steady-state Closed-loop Amplification	212
3.6.2	Additive and Multiplicative Disturbances	213
3.7	Block Diagram and Closed-loop Response of a Feedback Control Systems	215
3.8	Classification of Feedback Control Systems	219
3.8.1	Manual and Automatic Feedback Control Systems	219
3.8.2	Active and Passive Feedback Control Systems	220

3.8.3	Regulatory and Servomechanism Feedback Control Systems	221
3.8.4	Single-input, Single-output (SISO) and Multiple-input, Multiple-output (MIMO, Multivariable) Feedback Control Systems	222
3.8.5	Continuous-data (Analog) and Sampled-data (Digital) Feedback Control Systems	224
3.8.6	Negative and Positive Feedback Control Systems	224
3.9	Selection of Feedback Control Systems	225
3.9.1	Performance Criteria	225
3.10	Practical Applications of Feedback Control Systems	235
3.10.1	Equipment Specification	236
3.10.2	Input Processing	240
3.10.3	Feedback Control Algorithm	247
3.10.4	Output Processing	251
	<i>Illustrative Examples</i>	252
	<i>Review Questions</i>	259
	<i>Self-Check Quiz</i>	262

## Part II Process Control Dynamics and Design

<b>4</b>	<b>Response Analysis of Control System and Stability Criterion .....</b>	<b>269-326</b>
4.1	Introduction	269
4.2	Stability Analysis	269
4.2.1	General Conditions for Stability	271
4.2.2	Stability Criterion	272
4.2.3	Routh-Hurwitz Stability Criterion	274
4.2.4	Performance Specifications	277
4.2.5	Root-locus Method	280
4.2.6	Stability in the z-plane	288
4.3	Frequency Response	289
4.3.1	Frequency Response of a First-order System	292
4.3.2	Nyquist Plots	295
4.3.3	Bode Diagram	301
	<i>Illustrative Examples</i>	309
	<i>Review Questions</i>	319
	<i>Self-Check Quiz</i>	322
<b>5</b>	<b>Design of Process Control Systems .....</b>	<b>327-401</b>
5.1	Introduction	327
5.2	Specification of Control Systems	327
5.2.1	Performance Specification for SISO LTI Systems	328
5.2.2	Robustness Specification for SISO LTI Systems	332
5.2.3	Performance Specification for MIMO LTI Systems	334
5.2.4	Robustness Specification for MIMO LTI Systems	334

5.3	Control System Design Using Heuristics	335
5.3.1	Control Objectives	335
5.3.2	Selection of Controlled Variables	335
5.3.3	Selection of Manipulated Variables	336
5.3.4	Selection of Measured Variables	337
5.4	Control System Design Using Models	337
5.4.1	Structural Controllability Design	337
5.4.2	Relative Gain Array	338
5.5	Controller Design	340
5.5.1	Control Problems	340
5.5.2	Regulator Design	342
5.5.3	Other Design Considerations	343
5.6	Delay in Digital Controllers	347
5.6.1	Sampling in Digital Controllers	347
5.6.2	Sources of Delay in Digital Computer Control Systems	347
5.7	Controller Tuning	350
5.7.1	Rules of Thumb	351
5.7.2	Trial and Error Method	355
5.7.3	The Ziegler-Nichols (Z-N) Method	356
5.7.4	Continuous Cycling or Quarterly Decay Ratio Response by Ultimate Gain	358
5.7.5	Cohen and Coon (CC) Rules or Process Reaction Curve Method	359
5.7.6	Auto-tuning	362
5.7.7	Tuning of Proportional (P) Controller	363
5.7.8	Tuning of Proportional-plus-integral (PI) Controller	364
5.7.9	Tuning of PI+ Controller	365
5.7.10	Tuning of Proportional-plus Integral-plus Derivative (PID) Controller	369
5.7.11	Tuning of PID+ Controller	372
5.7.12	Tuning of Proportional-plus Derivative (PD) Controller	372
5.8	Controller Selection	372
5.8.1	Selection of Feedback Controller	377
	<i>Illustrative Examples</i>	380
	<i>Review Questions</i>	398
	<i>Self-Check Quiz</i>	399

## Part III Advanced Process Control

<b>6</b>	<b>Advanced Process Control Strategies .....</b>	<b>405-485</b>
6.1	Introduction	405
6.2	Cascade Control	406
6.2.1	Dynamic Response of Cascade Control System	410
6.2.2	Types of Cascade Control System	416
6.2.3	Controller Algorithm and Tuning	420
6.2.4	Implementation of Cascade Control System	421
6.3	Feedforward Control	422

6.4	Predictive Control Systems	426
6.4.1	Model-based Control	426
6.4.2	Multi-loop (Multivariable) Control System	434
6.5	Adaptive Control	435
6.5.1	Adaptive Controller Adjustment	437
6.5.2	Adaptive Control Schemes	439
6.5.3	Adaptive Control Techniques	442
6.6	Inferential Control	443
6.7	Intelligent Control	447
6.7.1	Artificial Intelligence	448
6.8	Statistical Process Control	459
6.9	Algorithms for Processes with Dead Time	461
6.9.1	Smith Predictor (SP) Algorithm	461
6.9.2	Analytical Predictor (AP) Algorithm	466
6.9.3	General-purpose Algorithm (Gautam and Mutharasan)	466
6.10	Optimal Control	466
6.10.1	Types of Optimal Control	468
6.10.2	Approaches for Obtaining Optimal Control Solutions	469
	<i>Illustrative Examples</i>	472
	<i>Review Questions</i>	477
	<i>Self-Check Quiz</i>	480

---

## Part IV Computer-Based Control

---

<b>7</b>	<b>Computer-Aided Process Control .....</b>	<b>489-515</b>
7.1	Introduction	489
7.2	Role of Computers in Process Control	490
7.3	Elements of Computer-aided Process Control System	491
7.4	Classification of Computer-aided Process Control System	494
7.4.1	Batch or Sequential Control Processes	494
7.4.2	Continuous Control Processes	497
7.4.3	Difference between Batch and Continuous Processes	498
7.4.4	Supervisory Computer Control Processes	499
7.4.5	Direct Digital Control (DDC) Processes	501
7.5	Computer-aided Process Control Architecture	503
7.5.1	Centralized Computer Control Systems	503
7.5.2	Distributed Computer Control Systems	503
7.5.3	Hierarchical Computer Control Systems	505
7.6	Man-Machine Interface	509
7.7	Economics of Computer-aided Process Control	510
7.7.1	Benefits of Using Computers in Process Control	510
	<i>Review Questions</i>	511
	<i>Self-Check Quiz</i>	513

## **8 Computer Hardware for Process Control..... 516–557**

- 8.1 Introduction 516
- 8.2 Organization of a General-purpose Computer 516
  - 8.2.1 Central Processing Unit (CPU) 517
  - 8.2.2 Storage 519
  - 8.2.3 Input/Output Devices 520
  - 8.2.4 Bus Interface 520
- 8.3 Process-related Interfaces 524
  - 8.3.1 Analog Interfaces 525
  - 8.3.2 Digital Interfaces 535
  - 8.3.3 Pulse Interfaces 535
  - 8.3.4 Real-time Clock (RTC) 535
  - 8.3.5 Standard Interfaces 536
- 8.4 Communication and Networking 537
  - 8.4.1 Communication Hierarchy 538
  - 8.4.2 Serial Transmission 540
  - 8.4.3 Parallel Transmission 541
  - 8.4.4 Synchronous Transmission 542
  - 8.4.5 Asynchronous Transmission 543
  - 8.4.6 Local Area Network 543
  - 8.4.7 Network Requirements 544
  - 8.4.8 ISO Reference Model 545
- 8.5 Industrial Communication Systems 548
  - 8.5.1 Communication Management Systems 548
  - 8.5.2 Field-buses 548
- 8.6 Data Transfer Techniques 552
- Review Questions 553*
- Self-Check Quiz 554*

## **9 Computer Software for Process Control.....558–605**

- 9.1 Introduction 558
- 9.2 Types of Computer Control Process Softwares 558
  - 9.2.1 System Software 559
  - 9.2.2 Application Software 559
  - 9.2.3 System Support Software 560
  - 9.2.4 Features of Process Control Computer Software 560
- 9.3 Real-time Operating System (RTOS) 561
  - 9.3.1 Single-task or Single-job Operating System 564
  - 9.3.2 Foreground–Background (Two-tasks) Operating System 566
  - 9.3.3 Multi-tasking Operating System 566
  - 9.3.4 Task Management 568
  - 9.3.5 Memory Management 569
- 9.4 Concurrent Programming 570
- 9.5 Real-time Application Software 571
  - 9.5.1 Real-time Application Languages 571
- 9.6 Software Fault Tolerance 574

9.7	Design of Software for Process Control (Real-time) Systems	576
9.7.1	Characteristics of a Real-time Software	576
9.7.2	Design Strategies	576
9.7.3	Design Techniques and Tools	577
9.7.4	Real-time Programming Languages	582
9.7.5	Algorithms	583
9.8	Software for Modelling and Simulating Control Systems	584
9.8.1	Special Requirements for a Simulation Tool	585
9.8.2	Overview of Modelling and Simulation Software	589
9.9	Computer-aided Control Systems Design (CACSD)	595
9.9.1	CACSD Block Diagram Tools	596
9.10	Computer (PC) Based Data Acquisition System	599
	<i>Review Questions</i>	600
	<i>Self-Check Quiz</i>	602

## **10 Microcomputer-Based Process Control—A Programmable Logic Controller (PLCs).....606-622**

10.1	Introduction to Microcomputers	606
10.2	Programmable Controllers	607
10.3	Programmable Logic Controllers	607
10.3.1	Evolution of PLC	608
10.3.2	PLC Architecture	608
10.3.3	Basic Structure	611
10.4	PLC Programming	612
10.5	Ladder Diagram	613
10.5.1	Ladder Diagram Symbols	614
10.5.2	Ladder Diagram Circuits	615
10.6	PLC Communications and Networking	617
10.7	PLC Selection	618
10.7.1	I/O Quantity (Size) and Type	618
10.7.2	I/O Remoting Requirements	618
10.7.3	Memory Size and Type	619
10.7.4	Programmer Units	619
10.8	PLC Installation	619
10.9	Advantages of Using PLCs	619
	<i>Review Questions</i>	620
	<i>Self-Check Quiz</i>	622

## **11 Microcomputer-Based Process Control—A Distributed Control System (DCS).....623-643**

11.1	Introduction	623
11.2	Overview of a Distributed Control System	623
11.2.1	Operator's Console	625
11.2.2	Video Display	625
11.2.3	Keyboard	626
11.2.4	Displays	626

11.3	DCS Software Configuration	630
11.3.1	Operating System Configuration	631
11.3.2	Controller Function Configuration	631
11.4	DCS Communication	631
11.4.1	International Fieldbus Standards	632
11.4.2	Data Highway Designs	632
11.4.3	Network Access Protocol	633
11.5	DCS—Supervisory Computer Tasks	635
11.5.1	Supervisory Control and Optimization	635
11.5.2	Production Monitoring and Control	636
11.5.3	Online Information System	636
11.5.4	Supervisory Control Algorithms	637
11.6	DCS Integration with PLCs and Computers	639
11.6.1	Man—Machine Interface	639
11.6.2	DCS Integration with PLCs	640
11.6.3	DCS Integration with Computers	640
11.7	Features of DCS	641
11.8	Advantages of DCS	641
	<i>Review Questions</i>	641
	<i>Self-Check Quiz</i>	642

## Part V Case Studies

### 12 Process Control—Case Study .....647-708

12.1	Introduction	647
12.2	Chemical-reactor Control System	647
12.2.1	System Description	647
12.2.2	Transfer Function of Reactor	648
12.2.3	Calculation of Parameter Values	650
12.2.4	Control Valve Design	651
12.2.5	Measuring Element	652
12.2.6	Controller Design	652
12.2.7	Transportation Lag	653
12.2.8	Block Diagram	653
12.2.9	Implementation of Computer-based Controller	654
12.3	Stirred-Tank-Temperature Control System	654
12.3.1	Control System	656
12.3.2	Frequency Response Analysis	657
12.3.3	The Bode Stability Criterion	659
12.4	Electric Oven Temperature Control	662
12.4.1	Oven Temperature Response	662
12.4.2	Design of a Temperature Controller	664
12.4.3	Choice of a Sampling Interval	665
12.4.4	Implementation of Computer Control	667

12.5	Reheat Furnace Temperature Control of Mill in an Integrated Steel Plant	668
12.5.1	System Description	669
12.5.2	Linear Weight Model for Controller	670
12.5.3	Furnace Model	670
12.5.4	Predictive Model	671
12.5.5	Adaption	673
12.5.6	Practical Implementation of Computer Control of Slab Reheat Furnace	676
12.5.7	Benefits of Computer-Aided Control of the Slab Reheat Furnace	679
12.6	Thickness and Flatness Control System for Metal Rolling	679
12.6.1	Thickness Measurement and Control	679
12.6.2	Flatness Measurement and Control	680
12.6.3	Control System Specification	680
12.6.4	Mathematical Model of the Process	680
12.6.5	Design of Control Algorithms	681
12.6.6	Calculation of Control Algorithms	681
12.6.7	Realization of Control Algorithms	682
12.6.8	Implementation of Computer Control	683
12.7	Automation of Hot-strip Mill in an Integrated Steel Plant	684
12.7.1	System Description	685
12.7.2	Level-1 Computer Control System	686
12.7.3	Level-2 Computer Control System	689
12.7.4	Implementation of Computer-Aided Control System	698
12.7.5	Benefits of Computer-Aided Control of Hot-Strip Mill	698
12.8	Computer-aided Control of Electric Power Generation Plant	699
12.8.1	System Overview	699
12.8.2	Control Objectives	699
12.8.3	Basic Architectures of Control Systems	702
12.8.4	Implementation of Computer-Aided Control System	707

<b><i>Bibliography</i></b> .....	<b>709-712</b>
<b><i>Answers to Self-Check Quizzes</i></b> .....	<b>713-720</b>
<b><i>Index</i></b> .....	<b>721-723</b>
