Fundamentals of Soil Dynamics and Earthquake Engineering

Bharat Bhushan Prasad

CONTENTS

Preface

xiii

1. INTRODUCTION

1-37

- 1.1 Geotechnical Engineering and Soil Dynamics 1
- 1.2 Soil Dynamics and Structural Dynamics 2
- 1.3 Dynamic Loading and Dynamics of Vibrations 6
- 1.4 Stress Conditions of Soil under Dynamic Loading 7
- 1.5 Soil Dynamics and Earthquake Engineering 7
- 1.6 Lithological and Seismotectonics Profile of India 8
- 1.7 Some Past Indian Earthquakes 15
 - 1.7.1 The Bhuj Earthquake 2001 15
 - 1.7.2 The Assam Earthquake 1897 17
 - 1.7.3 The Bihar-Nepal Earthquake 1934 18
- 1.8 Other Earthquakes of India 19
 - 1.8.1 Some Past Indian Earthquakes 19
- 1.9 Global International Seismicity—Seismicity of the Earth 21
 - 1.9.1 Global Seismic Hazard Assessment 25
- 1.10 Significant Case History of Some Past Earthquakes 27
 - 1.10.1 San Francisco, California, Earthquake (April 18, 1906) 27
 - 1.10.2 Loma Prieta Earthquake, Part 1 27
 - 1.10.3 Loma Prieta Earthquake, Part 2 28
 - 1.10.4 San Fernando Valley California Earthquakes 28
 - 1.10.5 Great Hanshin-Awaji (Kobe) Earthquake, January 17, 1995 29
 - 1.10.6 Izmit (Kocaeli) Turkey Earthquake, August 17, 1999-Set 1, Coastal Effects 29
 - 1.10.7 Duzce, Turkey Earthquake, November 12, 1999 30
 - 1.10.8 Great Chile Earthquake of May 22, 1960 30
- 1.11 Uncertainty, Hazard, Risk, Reliability and Probability of Earthquakes 31
 - 1.11.1 Uncertainty and Hazard 31
 - 1.11.2 Risk, Reliability and Probability of Earthquakes 33

1.12	Earthquake Prediction and Prevention	33	
	<i>Problems</i>	36	
2.	SEISMOLOGY AND EARTHQUAKES		38-96
2.1	Introduction	38	
2.2	Structure of the Earth's Interior	44	
	2.2.1 Rheological Division of the Earth's Interior	49	
2.3	Continental Drifts	52	
	2.3.1 The Mobile Belt	54	
	2.3.2 The Gondwanaland Group	54	
	2.3.3 Occurrence of Distribution	56	
	2.3.4 The Himalayas	56	
2.4	Plate Tectonics	58	
2.5	Elastic Rebound Theory	61	
2.6	Reservoir Triggered Seismicity	63	
	2.6.1 Mechanism of RTS Earthquakes	63	
2.7	Mechanics of Faulting and Earthquakes	66	
2.8	Size of Earthquake	71	
	2.8.1 Intensity of Earthquake	71	
	2.8.2 Magnitude of Earthquake	77	
	2.8.3 Energy Associated with Earthquake	80	
2.9	Locating the Earthquakes	82	
	2.9.1 Location of the Epicentre	82	
	2.9.2 Determining the Depth of Focus of Earthquake	82	
	2.9.3 Isoseismal Maps	83	
2.10	Plate Tectonics, Plate Boundaries and Earthquakes in India	85	
	2.10.1 Earthquakes in Peninsular India	87	
	2.10.2 Earthquake in Himalayan Region	89	
	2.10.3 Earthquakes in the North-Eastern Region	91	
	2.10.4 Earthquakes in Andaman and Nicobar Islands	92	
2.11	Measuring Earthquakes	93	
	<i>Problems</i>	93	
3.	THEORY OF VIBRATIONS		97-185
3.1	Introduction	97	
3.2	Periodic Motion	99	
	3.2.1 Frequency Analysis	101	
3.3	Classical Theory	103	
3.4	Free Vibrations SDF Undamped System	110	
3.5	Free Vibrations SDF Damped System	114	
	3.5.1 Free Vibrations of Viscously Damped System	118	
3.6	Forced Vibration—SDF Undamped System	130	
3.7	Forced Vibration—SDF Damped System	132	
3.8	Energy Dissipation Mechanism—Types of Damping	142	

3.9	System under Impulse and Transient Loading	147
3.9.1	Method of Solution	148
3.9.2	Duhamel's Integral	150
3.9.3	Dirac Delta Function	153
3.10	Transmissibility	155
3.10.1	Transfer Function	157
3.11	Fourier Analysis	158
3.12	Rotational and Torsional Vibration	162
3.13	Mobility and Impedance Methods	168
3.14	Analogue Method	174
3.14.1	Dimensional Analysis	177
3.15	Nonlinear Vibrations	177
3.16	Random Vibrations	179
	<i>Problems</i>	183

4. DYNAMICS OF ELASTIC SYSTEM

186–246

4.1	Introduction	186
4.2	Vibrations of Two-Degree Freedom System	188
4.2.1	Free Vibrations	188
4.2.2	Damped Vibrations	189
4.3	Vibrations of Multi-Degree Freedom System	193
4.4	Mode Participation Factor	201
4.5	Vibrations of Continuous Systems	212
4.6	Vibrations of Beams	214
4.7	Vibrations of Beams on Elastic Foundation	223
4.8	Vibration of Plates	228
4.9	Vlasov and Leontev Method for Vibration Analysis	231
4.9.1	Free Vibrations of Beams on Elastic Foundation	233
4.10	Vibration of Plates on Elastic Foundation	235
4.11	Numerical Methods	238
4.12	Dimensional Analysis	240
4.13	Analogue Method	241
	<i>Problems</i>	243

5. WAVE PROPAGATION

247–291

5.1	Introduction	247
5.2	One-Dimensional Wave Motion	249
5.3	Axial Wave Propagation	251
5.4	Solution of Wave Equation	252
5.5	Wave Propagation in an Elastic Infinite Medium	258
5.5.1	2D Stress Analysis	258
5.5.2	3D Stress Analysis	260
5.5.3	Solution for Equation of Motion—Primary Wave	271
5.5.4	Solution for Equation of Motions—Shear Waves	272
5.6	Lamb Theory for Wave Propagation	275

5.7	Rayleigh Waves—Wave Propagation in Elastic Half Space	277
5.7.1	Mechanism of Wave Propagation at the Surface	281
5.7.2	Love Waves	282
5.8	Concepts of Phase Velocity and Group Velocity	282
5.8.1	Phase Velocity	282
5.8.2	Group Velocity	283
5.8.3	Relationship of Group Velocity with Phase Velocity	284
5.9	Propagation of Flexural Waves in Beams on Elastic Foundations	286
5.9.1	Equation of Wave Motion	286
	<i>Problems</i>	290
6.	DYNAMIC SOIL PROPERTIES	292–353
6.1	Introduction	292
6.2	Representation of Stress Condition by Mohr' Circle and Stress Path	293
6.3	Dynamic Stress Strain Relationship	297
6.4	Determination of Dynamic Soil Properties	298
6.4.1	Field Tests	299
6.4.2	Laboratory Tests	326
6.4.3	Interpretation of Test Results	336
6.5	Shake Table Testing	337
6.6	Shear Phenomenon of Particulate Media	341
6.7	Behaviour of Soil under Pulsating Load	343
6.8	Damping Ratio	351
	<i>Problems</i>	353
7.	DYNAMIC EARTH PRESSURE	354–375
7.1	Introduction	354
7.2	Classical Theory for Static Earth Pressure	355
7.2.1	Rankine's Earth Pressure Theory	355
7.2.2	Coulomb's Earth Pressure Theory	357
7.2.3	Culmann's Graphical Construction	360
7.3	Dynamic Earth Pressure Theory	361
7.4	Mononobe-Okabe Theory for Dynamic Earth Pressure	362
7.4.1	Yield Acceleration	363
7.5	Displacement Analysis	365
7.6	Dynamic Stability Analysis	365
7.6.1	Effect of Saturation on Lateral Earth Pressure	369
7.6.2	Partially Submerged Backfill	370
7.7	Recommendations of Indian Standard Code of Practice	370
7.7.1	Lateral Earth Pressure	371
7.7.2	Dynamic Active Earth Pressure	371
7.7.3	Dynamic Passive Earth Pressure	373
7.7.4	Active Pressure Due to Uniform Surcharge	374
7.7.5	Passive Pressure to Uniform Surcharge	374
	<i>Problems</i>	374

8. STRONG GROUND MOTION	376-407
8.1 Introduction	376
8.2 Strong-Motion Observations Studies	379
8.3 Strong-Motion Measurement	383
8.3.1 Seismographs	383
8.3.2 Other Types of Seismograms	387
8.3.3 Data and Digitization	391
8.3.4 Strong-Motion Records	392
8.4 Array Observations	392
8.4.1 Array Observations in Japan and USA	393
8.5 Characteristic of Strong Ground Motion	394
8.5.1 Earthquake Magnitude	394
8.5.2 Peak Ground Acceleration (PGA), Peak Ground Velocity (PGV), Peak Ground Displacement (PGD)	395
8.5.3 Duration of the Strong Ground Motion	396
8.5.4 Ground Motion Attenuation Model	396
8.5.5 Regression Analysis	398
8.5.6 Stress Drop	398
8.6 Strong-Motion Parameters and Its Evaluation	398
8.6.1 Frequency Content Parameters	398
8.6.2 Power Spectra	399
8.6.3 Bandwidth and Predominant Period	400
8.6.4 Spectral Parameters	400
8.6.5 Other Ground-Motion Parameters	401
8.6.6 Corner Frequency and Cut-off Frequency	402
8.7 Evaluation of Strong-Motion Parameters	403
8.8 Method for Simulating Strong Ground Motion	406
<i>Problems</i>	406
9. SEISMIC HAZARD ANALYSIS	408-439
9.1 Introduction	408
9.2 Meaning of Earthquake-Hazard Analysis	409
9.3 Parameters for Seismic Hazard Assessment	410
9.3.1 Evaluation of Seismic Source	410
9.3.2 Ground Motion Attenuations	410
9.3.3 Earthquake Recurrence Analysis	411
9.3.4 Local Site and Soil Conditions	412
9.4 Risk Index and Evaluation of Earthquake Motion	412
9.4.1 Historical Earthquake Data	413
9.4.2 Aleratory and Epistemic Variability	413
9.4.3 Logic Tree	414
9.4.4 Active-Fault Data	414
9.4.5 Evaluation of Probability of Earthquake Occurrence Based on Historical Earthquake Data	415
9.4.6 Calculation of Earthquake Occurrence Based on Active-Fault Data	415
9.4.7 Considerations of Combined Historical Earthquake Data and Active-Fault Data	415

9.5	Method of Analysis	415	
9.5.1	Deterministic Seismic Hazard Analysis (DSHA)	417	
9.5.2	Probabilistic Seismic Hazard Analysis (PSHA)	418	
9.6	Classification of Seismic Zones	420	
9.6.1	Parameters for Seismic Zoning	422	
9.6.2	Seismic Zoning of India	422	
9.6.3	Seismic Zoning Maps of Indian Code	424	
9.6.4	Seismic Zoning Maps by Individual Studies	427	
9.6.5	Zoning Maps Based on Probabilistic Approach	432	
9.7	Model for Evaluation of Seismic Hazard	433	
9.7.1	Poisson Model	433	
9.7.2	Non-Poisson Model	434	
9.7.3	Other Models	434	
9.7.4	Seismic Hazard Analysis Based on Poisson Model	435	
	<i>Problems</i>	438	
10.	LIQUEFACTION OF SOILS		440-475
10.1	Introduction	440	
10.2	Theory of Liquefaction	443	
10.3	Liquefaction Analysis	444	
10.3.1	Cyclic Resistance Ratio	447	
10.4	Factor of Safety against Liquefaction	449	
10.5	Factors Responsible for Liquefaction	451	
10.6	Criterion for Assessing Liquefaction	454	
10.6.1	Criteria Based on Grain Size	454	
10.6.2	Energy Based Liquefaction Criterion	455	
10.7	Evaluation of Liquefaction Potential	456	
10.8	Laboratory Investigations of Soil Liquefaction	460	
10.8.1	Laboratory Test Data	462	
10.9	Mechanics of Dynamic Compaction	464	
10.10	Advances in the Analysis of Soil Liquefaction	472	
10.10.1	Effective Stress Method for Liquefaction Analysis	472	
10.10.2	Liquefaction Analysis Based on Material Instability	473	
10.11	Remedial Measures for Liquefaction	474	
	<i>Problems</i>	474	
11.	RISK, RELIABILITY AND VULNERABILITY ANALYSIS		476-496
11.1	Introduction	476	
11.2	Reliability and Probability of Failure	478	
11.3	Reliability and Geotechnical Engineering	479	
11.4	Uncertainty in Soil Strength	480	
11.4.1	Variation of Strength Parameters of Soil	481	
11.5	General Principles of Reliability	481	
11.6	Reliability and Distribution Function	483	
11.6.1	Normal Distribution Function	484	
11.6.2	Lognormal Distribution	487	
11.6.3	Beta Distribution Function	488	

11.7	Risk and Reliability	488
11.7.1	Risk Analysis	489
11.7.2	The Role of Acceptable Risk	490
11.7.3	Risk	490
11.7.4	Decision Rules	490
11.7.5	Risk Assessment	491
11.7.6	Common Consequence Analysis	492
11.8	Vulnerability Analysis	492
11.9	Damage and Loss Estimation	493
	<i>Problems</i>	495

APPENDIX: VIBRATION MEASUREMENTS

497-530

A.1	Introduction	497
A.2	General Considerations for Measurements	498
A.3	Principle of Vibration Measurement	500
A.4	Vibration Measurement for Earthquakes	503
A.5	Vibration Instruments	516
A.5.1	Vibration Exciters	516
A.5.2	Instruments with High Natural Frequency	517
A.5.3	Vibration Measuring Devices	518
A.6	Role of Transducers in Instrumentation	519
A.6.1	Seismic Pickups	520
A.7	Sensitivity of Measuring Instruments	521
A.8	Dynamic Testing of Foundations and Structures	522
A.9	Vibration Measurements for Random Signals (Random Vibrations)	522
A.9.1	Signal Analysis Techniques	527
A.9.2	Time Domain Analysis	527
A.9.3	Frequency Domain Analysis	527
A.9.4	Transfer Function	528
A.9.5	Amplitude Modulation	529
A.9.6	Frequency Modulation	530
