Protein Crystallography

A Concise Guide

Eaton E. Lattman and Patrick J. Loll

Contents

Preface ix

Chapter 1. Introduction 1

1.1 What Is X-ray Crystallography? 1

1.2 A Quick Look at Protein Crystals 12

1.3 Noncrystalline Specimens 15

1.4 Summary 17

Further Reading 17

Chapter 2. A Physical Understanding of Diffraction 19

2.1 What Is Diffraction? 19

2.2 Diffraction from One-Dimensional Crystals 25

2.3 Reconstructing Images from Diffraction Patterns 29

2.4 Summary 35

Further Reading 36

Chapter 3. Diffraction from Three-Dimensional Crystals 37

3.1 The Electron Density Function in Three Dimensions 37

3.2 Calculating the Diffraction Pattern from a Known Structure 49

3.3 Summary 53

Further Reading 54

Chapter 4. Phase Determination by Isomorphous Replacement 55

4.1 Measuring the Phases 55

4.2 MAD Phasing 61

4.3 Fitting Models to Experimental Electron Density Maps 68

4.4 Summary 70

Further Reading 70

Chapter 5. The Patterson Function 72

5.1 Definition of the Patterson Function 72

5.2 Using the Patterson Function to Locate Atoms 76

5.3 Summary 81

Further Reading 82

Chapter 6. Phasing with Partially Known Structures 83

6.1 Difference Fourier Maps 83

6.2 Molecular Replacement 87

6.3 Summary 101

Further Reading 101

Chapter 7. Crystallographic Refinement *102*

7.1 Refinement Improves the Model 102

7.2 Least-Squares Refinement 103

7.3 Summary 111

Further Reading 112

Glossary *113*

Index 131
