

# Exercise and Cognitive Function

Editors

Terry McMorris   Phillip Tomporowski   Michel Audiffren

 WILEY-BLACKWELL

# Contents

<b>Preface</b>	<b>ix</b>
<b>Contributors</b>	<b>xi</b>
<b>PART 1 THEORETICAL AND METHODOLOGICAL ISSUES</b>	<b>1</b>
<b>1 Acute exercise and psychological functions: a cognitive-energetic approach</b>	<b>3</b>
<i>Michel Audiffren</i>	
1.1 Varieties of exercise effects on psychological variables	4
1.2 The cognitive psychology approach	9
1.3 The energetic approach	11
1.4 Exercise effects and cognitive-energetic models	14
1.5 Sensorimotor and cognitive functions affected by exercise	24
1.6 Limits of the cognitive-energetic approach and future perspectives	33
1.7 Conclusion	39
<b>2 Exercise and cognitive function: a neuroendocrinological explanation</b>	<b>41</b>
<i>Terry McMorris</i>	
2.1 Catecholamines and 5-hydroxytryptamine as brain neurotransmitters	41
2.2 How exercise induces increases in brain concentrations of noradrenaline, dopamine, cortisol and 5-hydroxytryptamine	43
2.3 Exercise, catecholamines, cortisol and cognition: research	50
2.4 Task type	59
2.5 Discussion	63
2.6 Developing a neuroendocrinological model for an interaction between exercise and cognition	67
<b>3 The transient hypofrontality theory and its implications for emotion and cognition</b>	<b>69</b>
<i>Arne Dietrich</i>	
3.1 Clearing the ground	71
3.2 Exercise-induced transient hypofrontality	73

3.3	Implications for emotion	79
3.4	Implications for cognition	81
3.5	Reconceptualizing the existing data in the field	87
<b>4</b>	<b>Methodological issues: research approaches, research design, and task selection</b>	<b>91</b>
	<i>Phillip D. Tomporowski</i>	
4.1	Research approaches	92
4.2	Research design issues	99
4.3	Task selection issues	106
4.4	Conclusions and recommendations	112
<b>PART 2</b>	<b>ACUTE EXERCISE AND COGNITION</b>	<b>115</b>
<b>5</b>	<b>Exercise, dehydration and cognitive function</b>	<b>117</b>
	<i>Terry McMorris</i>	
5.1	Exercise-induced dehydration and cognitive function	119
5.2	Discussion	128
5.3	Conclusions	134
<b>6</b>	<b>Exercise, nutrition and cognition</b>	<b>135</b>
	<i>Adam David Cunliffe and Gulshanara Begum</i>	
6.1	Fatigue and limits to human performance	136
6.2	Assessing the effects of exercise and nutrition on cognitive performance	138
6.3	Nutrition, exercise and cognitive performance	142
6.4	Micronutrients, exercise and cognitive performance	145
6.5	Nutritional ergogenic aids and cognitive performance	147
6.6	Integration of research observations	148
6.7	Challenges in research	150
6.8	Conclusion	151
<b>7</b>	<b>A chronometric and electromyographic approach to the effect of exercise on reaction time</b>	<b>153</b>
	<i>Karen Davranche and Michel Audiffren</i>	
7.1	Research	156
7.2	Conclusion	159
<b>8</b>	<b>Acute aerobic exercise effects on event-related brain potentials</b>	<b>161</b>
	<i>Charles H. Hillman, Matthew Pontifex and Jason R. Themanson</i>	
8.1	Executive control	163
8.2	Neuroelectric measurement	164
8.3	Event-related brain potentials during exercise	165

8.4	Event-related brain potentials following exercise	170
8.5	Future directions and conclusions	177
<b>9</b>	<b>Exercise and decision-making in team games</b>	<b>179</b>
	<i>Terry McMorris</i>	
9.1	Designing a decision-making test	180
9.2	Research results	183
9.3	Ecological validity and future research	189
9.4	Implications for team games players and coaches	192
<b>10</b>	<b>Blood glucose and brain metabolism in exercise</b>	<b>193</b>
	<i>Niels H. Secher, Thomas Seifert, Henning B. Nielsen and Bjørn Quistorff</i>	
10.1	Cerebral metabolism during exercise	194
10.2	Cerebral oxygenation	202
10.3	Cerebral metabolism	203
10.4	Acute hypoglycemia	209
10.5	Conclusions	209
10.6	Future research	210
	Acknowledgements	210
<b>PART 3</b>	<b>CHRONIC EXERCISE AND COGNITION</b>	<b>211</b>
<b>11</b>	<b>An integrated approach to the effect of acute and chronic exercise on cognition: the linked role of individual and task constraints</b>	<b>213</b>
	<i>Caterina Pesce</i>	
11.1	The gap between acute and chronic exercise research	213
11.2	Individual constraints on the acute exercise–cognition relationship: the role of chronic exercise effects	215
11.3	Effect of physical fitness: links to exercise intensity and to the time relation between physical exercise and cognitive task	218
11.4	Effect of cognitive expertise: links to cognitive task complexity, exercise intensity and duration, and age	219
11.5	Effect of motor coordination skills: links to physical exercise complexity, intensity and duration	223
11.6	Bridging the gap between acute and chronic exercise studies	225
<b>12</b>	<b>Chronic exercise and cognition in older adults</b>	<b>227</b>
	<i>Jennifer Etnier</i>	
12.1	Theoretical underpinnings	228
12.2	Empirical evidence	230
12.3	Moderators of the relationship	245
12.4	Practical conclusions	245
12.5	Challenges	246
12.6	Future research	247

<b>13 Exercise and cognition in children</b>	<b>249</b>
<i>Catherine L. Davis and Kate Lambourne</i>	
13.1 Definition of terms	249
13.2 Literature review	250
13.3 The Medical College of Georgia study	254
13.4 Potential mechanisms	262
13.5 Summary and recommendations for future research	266
<b>14 Chronic exercise and developmental disabilities</b>	<b>269</b>
<i>James Zagrodnik and Michael Horvat</i>	
14.1 Defining terms	269
14.2 Research investigating the effects of exercise on cognition among the developmentally disabled	272
14.3 Problems to address and future research considerations	279
14.4 Practical applications and conclusions	282
<b>15 Chronic exercise in brain diseases</b>	<b>285</b>
<i>Laura Eggermont and Erik Scherder</i>	
15.1 Observational studies of physical activity	286
15.2 Physical activity intervention studies	288
15.3 Physical activity, cognition and different types of dementia	298
15.4 Role of vascular disease	302
15.5 Neurodegenerative disease, nitric oxide, vascular disease and physical activity	305
15.6 Final conclusion	305
<b>PART 4 DISCUSSION AND CONCLUSION</b>	<b>307</b>
<b>16 Summary and direction for future research</b>	<b>309</b>
<i>Terry McMorris, Phillip D. Tomporowski, and Michel Audiffren</i>	
16.1 Summary: emerging theoretical approaches	309
16.2 Summary of research results	312
16.3 Future theoretically driven research	314
16.4 Future applied research	316
16.5 General summary	317
