

PAULA INGRAM AND IRENE LAVERY

CLINICAL SKILLS FOR HEALTHCARE ASSISTANTS

 WILEY-BLACKWELL

Contents

<i>Preface</i>	ix
<i>Acknowledgements</i>	x
<i>Introduction</i>	xi

Section 1: Fundamental skills

1	Accountability	1
	Aim of this chapter	1
	Regulatory body	1
	What do we mean by accountability?	3
	Delegation	4
	Related aspects and terminology	7
	Summary	11
	Self-assessment	12
	Table of cases	12
2	Communication in healthcare	14
	Aim of this chapter	14
	Why good communication is important	14
	Communication methods	16
	Strategies to improve communication	20
	Related aspects and terminology	21
	Summary of good communication	23
	Self-assessment	24
	Addendum	24
3	Psychological care	26
	Aim of this chapter	26
	What is meant by psychological care?	26
	Psychological assessment in the healthcare setting	27
	The importance of psychological care in the healthcare setting	28
	Strategies to optimise psychological wellbeing	31
	Pharmacological (drug-related) options	34
	Non-pharmacological options	34
	Therapeutic sense of self	34
	Common problems	35
	Summary	36
	Self-assessment	37

4	Documentation and record keeping	38
	Aim of this chapter	38
	The importance and purpose of documentation in relation to clinical skills . . .	38
	Confidentiality in records and documentation	40
	Types of documentation	40
	Legal aspects relating to documentation	41
	Strategies to improve standards of record keeping	43
	Related aspects and terminology	44
	Common problems	45
	Summary	45
	Recommendation: the review of Skills for Health (2004a-c)	47
	Self-assessment	47

Section 2: Core clinical skills

5	Pulse	51
	Aim of this chapter	51
	What is a pulse?	51
	Relevant anatomy and physiology	51
	Related aspects and terminology	52
	Factors affecting the pulse rate	55
	Terminology	56
	Automated devices	58
	Fetal heartbeat	59
	Documentation	61
	Common problems	61
	Summary	63
	Self-assessment	65
6	Blood pressure monitoring	67
	Aim of this chapter	67
	What is blood pressure?	67
	Reasons for monitoring blood pressure	67
	Who requests the test?	67
	Who can take a BP reading?	68
	What is done with the readings/information?	68
	Relevant anatomy and physiology	68
	Related aspects and terminology	70
	Terminology	72
	Equipment	73
	Sites for recording blood pressure	78
	Taking blood pressure	78
	Documentation	79
	Common problems	81

Summary	82
Self-assessment	85
7 Thermometry	88
Aim of this chapter	88
What is temperature?	88
Reasons for measuring temperature	88
Normal limits	89
Relevant anatomy and physiology	89
Related aspects and terminology	90
Terminology	94
Taking a temperature reading	97
Route	100
Taking a temperature reading	100
Documentation	103
Common problems	104
Summary	105
Self-assessment	107
8 Pulse oximetry	109
Aim of this chapter	109
What is an oxygen saturation reading?	109
Who can perform the test?	109
Reasons for recording an oxygen saturation level	109
Relevant anatomy and physiology	110
Related aspects and terminology	111
The mechanics of pulse oximetry	111
Equipment	112
Normal readings	112
Using a pulse oximeter	113
Documentation	115
Common problems	116
Summary	118
Self-assessment	118
9 Respiratory care	120
Aim of this chapter	120
What do we mean by respiratory care?	120
Relevant anatomy and physiology	120
Upper respiratory system	121
Lower respiratory system	122
Recording a respiratory rate	123
How to measure and record a respiratory rate accurately	126
Measuring and recording a peak expiratory flow rate	126
Performing suctioning	129
Related aspects and terminology	131

Common problems	131
Summary	132
Self-assessment	136
Addendum	136
10 Urinalysis and faecal occult blood testing	139
Aim of this chapter	139
Reasons for performing urinalysis and FOB tests	139
Relevant anatomy and physiology	139
Urinalysis testing	140
<i>Faecal occult blood testing</i>	146
Related aspects and terminology (Tortora and Derrickson 2006)	148
Common problems	148
Summary	148
Self-assessment	149
Addendum	153
11 Urinary catheterisation and catheter care	154
Aim of this chapter	154
Reasons for urinary catheterisation and catheter care	154
Relevant anatomy and physiology	154
Types of catheterisation	157
Patient preparation for catheterisation	161
Insertion technique	161
Catheter care	164
Sampling	166
Removal of catheter	167
Related aspects and terminology	168
Terminology	169
Common problems	169
Summary	175
Self-assessment	176
12 Venepuncture	178
Aim of this chapter	178
Reasons for performing venepuncture	178
Relevant anatomy and physiology	178
Common sites for venepuncture	179
Infection	179
Hand hygiene	181
Aseptic (sterile) technique	181
Protective clothing	181
Environment	181
<i>Performing the skill: requirements and technique</i>	181
Related aspects and terminology	187
Common problems	190

	Summary	191
	Self-assessment	192
13	Blood glucose monitoring	195
	Aim of this chapter	195
	What causes diabetes?	195
	Reasons for performing blood glucose measurement	195
	Relevant anatomy and physiology	196
	Related aspects and terminology	198
	Types of diabetes	198
	Blood glucose levels	200
	Hypoglycaemia	203
	Hyperglycaemia	207
	Common problems	207
	Summary	209
	Self-assessment	212
14	Fluid balance and intravenous maintenance	214
	Aim of this chapter	214
	Reasons for monitoring fluid balance	214
	Related anatomy and physiology	214
	Electrolytes	215
	Related aspects and terminology	216
	Fluid balance charts	218
	The intravenous route	218
	Care of the cannula	221
	Discontinuing an IV infusion	222
	Common problems	223
	Summary	224
	Self-assessment	225

Section 3: Complex clinical skills

15	Medicines	231
	Aim of this chapter	231
	Healthcare assistants role within medicine administration	231
	Types of medicines	231
	Medication prescribing and legal aspects	232
	Related aspects and terminology	234
	Common medications	237
	Errors in administration and adverse reactions	241
	Summary	241
16	Peripheral intravenous cannulation	243
	Aim of this chapter	243
	Reasons for cannulation	243

Why perform peripheral IV cannulation	243
Relevant anatomy and physiology	244
How to insert and remove a peripheral IV cannula	245
Environment	248
Performing peripheral IV cannula: requirements and technique	248
Patient education for peripheral IV cannulation	253
Related aspects and terminology	254
Common problems/potential complications of peripheral IV cannulation	255
Summary	261
Self-assessment	261
17 Recording a 12-lead ECG	265
Aim of this chapter	265
Relevant anatomy and physiology	265
The heart's conduction system	266
Electricity of the heart	267
Reasons for recording a 12-lead ECG	267
How to perform a 12-lead ECG	268
Related aspects and terminology	272
Common problems and actions	275
Summary	276
Self-assessment	276
<i>Index</i>	281
