

MECHANICS OF FLIGHT

Second Edition

WARREN F. PHILLIPS

CONTENTS

Preface	xi
Acknowledgments	xiii
1. Overview of Aerodynamics	1
1.1. Introduction and Notation	1
1.2. Fluid Statics and the Atmosphere	10
1.3. The Boundary Layer Concept	14
1.4. Inviscid Aerodynamics	16
1.5. Review of Elementary Potential Flows	20
1.6. Incompressible Flow over Airfoils	26
1.7. Trailing-Edge Flaps and Section Flap Effectiveness	39
1.8. Incompressible Flow over Finite Wings	46
1.9. Flow over Multiple Lifting Surfaces	94
1.10. Wing Stall and Maximum Lift Coefficient	108
1.11. Wing Aerodynamic Center and Pitching Moment	120
1.12. Inviscid Compressible Aerodynamics	131
1.13. Compressible Subsonic Flow	134
1.14. Supersonic Flow	139
1.15. Problems	146
2. Overview of Propulsion	153
2.1. Introduction	153
2.2. The Propeller	168
2.3. Propeller Blade Theory	173
2.4. Propeller Momentum Theory	202
2.5. Off-Axis Forces and Moments Developed by a Propeller	216
2.6. Turbojet Engines: The Thrust Equation	228
2.7. Turbojet Engines: Cycle Analysis	233
2.8. The Turbojet Engine with Afterburner	241
2.9. Turbofan Engines	245
2.10. Concluding Remarks	253
2.11. Problems	254
3. Aircraft Performance	259
3.1. Introduction	259
3.2. Thrust Required	260
3.3. Power Required	270
3.4. Rate of Climb and Power Available	277
3.5. Fuel Consumption and Endurance	287
3.6. Fuel Consumption and Range	295

3.7.	Power Failure and Gliding Flight	306
3.8.	Airspeed, Wing Loading, and Stall	317
3.9.	The Steady Coordinated Turn	319
3.10.	Takeoff and Landing Performance	337
3.11.	Accelerating Climb and Balanced Field Length	353
3.12.	Problems	365
4.	Longitudinal Static Stability and Trim	377
4.1.	Fundamentals of Static Equilibrium and Stability	377
4.2.	Pitch Stability of a Cambered Wing	381
4.3.	Simplified Pitch Stability Analysis for a Wing-Tail Combination	384
4.4.	Stick-Fixed Neutral Point and Static Margin	400
4.5.	Estimating the Downwash Angle on an Aft Tail	411
4.6.	Simplified Pitch Stability Analysis for a Wing-Canard Combination	421
4.7.	Effects of Drag and Vertical Offset	436
4.8.	Effects of Nonlinearities on the Aerodynamic Center	458
4.9.	Effects of the Fuselage, Nacelles, and External Stores	472
4.10.	Contribution of Running Propellers	476
4.11.	Contribution of Jet Engines	482
4.12.	Problems	486
5.	Lateral Static Stability and Trim	497
5.1.	Introduction	497
5.2.	Yaw Stability and Trim	500
5.3.	Estimating the Sidewash Gradient on a Vertical Tail	518
5.4.	Estimating the Lift Slope for a Vertical Tail	525
5.5.	Effects of Tail Dihedral on Yaw Stability	529
5.6.	Roll Stability and Dihedral Effect	548
5.7.	Roll Control and Trim Requirements	567
5.8.	The Generalized Small-Angle Lateral Trim Requirements	574
5.9.	Steady-Heading Sideslip	577
5.10.	Engine Failure and Minimum-Control Airspeed	582
5.11.	Longitudinal-Lateral Coupling	596
5.12.	Control Surface Sign Conventions	597
5.13.	Problems	597
6.	Aircraft Controls and Maneuverability	605
6.1.	Longitudinal Control and Maneuverability	605
6.2.	Effects of Structural Flexibility	623
6.3.	Control Force and Trim Tabs	632
6.4.	Stick-Free Neutral and Maneuver Points	644
6.5.	Ground Effect, Elevator Sizing, and CG Limits	646
6.6.	Stall Recovery	661
6.7.	Lateral Control and Maneuverability	666
6.8.	Aileron Reversal	679

6.9.	Other Control Surface Configurations	682
6.10.	Airplane Spin	693
6.11.	Problems	706
7.	Aircraft Equations of Motion	715
7.1.	Introduction	715
7.2.	Newton's Second Law for Rigid-Body Dynamics	725
7.3.	Position and Orientation: The Euler Angle Formulation	735
7.4.	Rigid-Body 6-DOF Equations of Motion	753
7.5.	Linearized Equations of Motion	754
7.6.	Force and Moment Derivatives	768
7.7.	Nondimensional Linearized Equations of Motion	788
7.8.	Transformation of Stability Axes	798
7.9.	Inertial and Gyroscopic Coupling	805
7.10.	Problems	807
8.	Linearized Longitudinal Dynamics	813
8.1.	Fundamentals of Dynamics: Eigenproblems	813
8.2.	Longitudinal Motion: The Linearized Coupled Equations	836
8.3.	Short-Period Approximation	847
8.4.	Long-Period Approximation	854
8.5.	Pure Pitching Motion	871
8.6.	Summary	876
8.7.	Problems	878
9.	Linearized Lateral Dynamics	885
9.1.	Introduction	885
9.2.	Lateral Motion: The Linearized Coupled Equations	885
9.3.	Roll Approximation	896
9.4.	Spiral Approximation	897
9.5.	Dutch Roll Approximation	906
9.6.	Pure Rolling Motion	919
9.7.	Pure Yawing Motion	922
9.8.	Longitudinal-Lateral Coupling	924
9.9.	Nonlinear Effects	939
9.10.	Summary	943
9.11.	Problems	945
10.	Aircraft Handling Qualities and Control Response	953
10.1.	Introduction	953
10.2.	Pilot Opinion	953
10.3.	Dynamic Handling Quality Prediction	958
10.4.	Response to Control Inputs	968
10.5.	Nonlinear Effects and Longitudinal-Lateral Coupling	986
10.6.	Problems	987

11. Aircraft Flight Simulation	989
11.1. Introduction	989
11.2. Euler Angle Formulations	990
11.3. Direction-Cosine Formulation	992
11.4. Euler Axis Formulation	993
11.5. The Euler-Rodrigues Quaternion Formulation	996
11.6. Quaternion Algebra	1000
11.7. Relations between the Quaternion and Other Attitude Descriptors	1004
11.8. Applying Rotational Constraints to the Quaternion Formulation	1013
11.9. Closed-Form Quaternion Solution for Constant Rotation	1015
11.10. Numerical Integration of the Quaternion Formulation	1021
11.11. Summary of the Flat-Earth Quaternion Formulation	1037
11.12. Aircraft Position in Geographic Coordinates	1044
11.13. Problems	1063
 Bibliography	 1069
 Appendixes	 1080
A Standard Atmosphere, SI Units	1080
B Standard Atmosphere, English Units	1081
C Aircraft Moments of Inertia	1082
 Nomenclature	 1086
Index	1113
