Table of Contents

Chapter 1. Aerodynamic Configurations and Dynamic Models 1
Pedro CASTILLO and Alejandro DZUL

1.1. Aerodynamic configurations 1
1.2. Dynamic models 6
1.2.1. Newton-Euler approach 7
1.2.2. Euler-Lagrange approach 9
1.2.3. Quaternion approach 10
1.2.4. Example: dynamic model of a quad-rotor rotorcraft 13
1.3. Bibliography 20

Chapter 2. Nested Saturation Control for Stabilizing the PVTOL Aircraft 21
Isabelle FANTONI and Amparo PALOMINO

2.1. Introduction 21
2.2. Bibliographical study 22
2.3. The PVTOL aircraft model 24
2.4. Control strategy 25
2.4.1. Control of the vertical displacement y 26
2.4.2. Control of the roll angle θ and the horizontal displacement x . . . 27
2.4.2.1. Boundedness of $\dot{\theta}$ 27
2.4.2.2. Boundedness of θ 28
2.4.2.3. Boundedness of $\dot{\bar{x}}$ 29
2.4.2.4. Boundedness of $\bar{x}$ 30
2.4.2.5. Convergence of θ, $\dot{\theta}$, $\bar{x}$ and $\dot{\bar{x}}$ to zero 32
2.5. Other control strategies for the stabilization of the PVTOL aircraft . . . 33
2.6. Experimental results 33
2.7. Conclusions 38
2.8. Bibliography 38

Chapter 3. Two-Rotor VTOL Mini UAV: Design, Modeling and Control . 41
Juan ESCARENO, Sergio SALAZAR and Eduardo RONDON

3.1. Introduction 41
3.2. Dynamic model 43
3.2.1. Kinematics 44
3.2.2. Dynamics 44
3.2.2.1. Forces acting on the vehicle 45
3.2.2.2. Torques acting on the vehicle 47
3.2.3. Model for control analysis 48
3.3. Control strategy 48
3.3.1. Altitude control 49
3.3.2. Horizontal motion control 49
3.3.3. Attitude control 50
3.4. Experimental setup 51
3.4.1. Onboard flight system (OFS) 52
3.4.2. Outboard visual system 53
3.4.2.1. Position 54
3.4.2.2. Optical flow 54
3.4.3. Experimental results 55
3.5. Concluding remarks 56
3.6. Bibliography 56

Chapter 4. Autonomous Hovering of a Two-Rotor UAV 59
Anand SANCHEZ, Juan ESCARENO and Octavio GARCIA

4.1. Introduction 59
4.2. Two-rotor UAV 60
4.2.1. Description 61
4.2.2. Dynamic model 61
4.2.2.1. Translational motion 64
4.2.2.2. Rotational motion 64
4.2.2.3. Reduced model 66
4.3. Control algorithm design 67
4.4. Experimental platform 73
4.4.1. Real-time PC-control system (PCCS) 73
4.4.1.1. Sensors and communication hardware 73
4.4.2. Experimental results 74
4.5. Conclusion 76
4.6. Bibliography 77

Chapter 5. Modeling and Control of a Convertible Plane UAV 79
Octavio GARCIA, Juan ESCARENO and Victor ROSAS

5.1. Introduction 79

5.2. Convertible plane UAV 80
5.2.1. Vertical mode 80
5.2.2. Transition maneuver 81
5.2.3. Horizontal mode 81
5.3. Mathematical model 81
5.3.1. Translation of the vehicle 82
5.3.2. Orientation of the vehicle 83
5.3.2.1. Euler angles 83
5.3.2.2. Aerodynamic axes 83
5.3.2.3. Torques 84
5.3.3. Equations of motion 85
5.4. Controller design 86
5.4.1. Hover control 86
5.4.1.1. Axial system 88
5.4.1.2. Longitudinal system 89
5.4.1.3. Lateral system 93
5.4.1.4. Simulation and experimental results 94
5.4.2. Transition maneuver control 96
5.4.3. Horizontal flight control 102
5.5. Embedded system 106
5.5.1. Experimental platform 106
5.5.2. Microcontroller 108
5.5.3. Inertial measurement unit (IMU) 109
5.5.4. Sensor fusion 109
5.6. Conclusions and future works 111
5.6.1. Conclusions 111
5.6.2. Future works 112
5.7. Bibliography 112

Chapter 6. Control of Different UAVs with Tilting Rotors 115
Juan ESCARENO, Anand SANCHEZ and Octavio GARCIA

6.1. Introduction 115
6.2. Dynamic model of a flying VTOL vehicle 116
6.2.1. Kinematics 117
6.2.2. Dynamics 118
6.3. Attitude control of a flying VTOL vehicle 119
6.4. Triple tilting rotor rotorcraft: *Delta* 119
6.4.1. Kinetics of *Delta* 120
6.4.2. Torques acting on the *Delta* 121
6.4.3. Experimental setup 123
6.4.3.1. Avionics 124
6.4.3.2. Sensor module (SM) 124
6.4.3.3. On-board microcontroller (OBM) 125

6.4.3.4. Data acquisition module (DAQ) 125
6.4.4. Experimental results 125
6.5. Single tilting rotor rotorcraft: *T-Plane* 127
6.5.1. Forces and torques acting on the vehicle 127
6.5.2. Experimental results 129
6.5.2.1. Experimental platform 129
6.5.2.2. Experimental test 130
6.6. Concluding remarks 131
6.7. Bibliography 132

Chapter 7. Improving Attitude Stabilization of a Quad-Rotor Using Motor Current Feedback 133
Anand SANCHEZ, Luis GARCIA-CARRILLO, Eduardo RONDON and Octavio GARCIA

7.1. Introduction 133
7.2. Brushless DC motor and speed controller 134
7.3. Quad-rotor 138
7.3.1. Dynamic model 139
7.4. Control strategy 140
7.4.1. Attitude control 140
7.4.2. Armature current control 142
7.5. System configuration 144
7.5.1. Aerial vehicle 145
7.5.2. Ground station 146
7.5.3. Vision system 147
7.6. Experimental results 148
7.7. Concluding remarks 150
7.8. Bibliography 151

Chapter 8. Robust Control Design Techniques Applied to Mini-Rotorcraft UAV: Simulation and Experimental Results 153
José Alfredo GUERRERO, Gerardo ROMERO, Rogelio LOZANO and Efraín ALCORTA

8.1. Introduction 153
8.2. Dynamic model 155
8.3. Problem statement 156
8.4. Robust control design 158
8.5. Simulation and experimental results 160
8.5.1. Simulations 160
8.5.2. Experimental platform 162
8.6. Conclusions 164
8.7. Bibliography 164

Chapter 9. Hover Stabilization of a Quad-Rotor Using a Single Camera . 167
Hugo ROMERO and Sergio SALAZAR

9.1. Introduction 167
9.2. Visual servoing 168
9.2.1. Direct visual servoing 169
9.2.2. Indirect visual servoing 169
9.2.3. Position based visual servoing 170
9.2.4. Image-based visual servoing 171
9.2.5. Position-image visual servoing 172
9.3. Camera calibration 173
9.3.1. Two-plane calibration approach 173
9.3.2. Homogenous transformation approach 175
9.4. Pose estimation 177
9.4.1. Perspective of n-points approach 177
9.4.2. Plane-pose-based approach 179
9.5. Dynamic model and control strategy 181
9.6. Platform architecture 183
9.7. Experimental results 184
9.7.1. Camera calibration results 185
9.7.2. Testing phase 185
9.7.3. Real-time results 185
9.8. Discussion and conclusions 186
9.9. Bibliography 188

Chapter 10. Vision-Based Position Control of a Two-Rotor VTOL Mini UAV 191
Eduardo RONDON, Sergio SALAZAR, Juan ESCARENO and Rogelio LOZANO

10.1. Introduction 191
10.2. Position and velocity estimation 193
10.2.1. Inertial sensors 193
10.2.2. Visual sensors 193
10.2.2.1. Position 193
10.2.2.2. Optical flow (OF) 195
10.2.3. Kalman-based sensor fusion 198
10.3. Dynamic model 200
10.4. Control strategy 203
10.4.1. Frontal subsystem (S_{cam_y}) 203
10.4.2. Lateral subsystem (S_{cam_x}) 204
10.4.3. Heading subsystem (S_ψ) 204
10.5. Experimental testbed and results 204
10.5.1. Experimental results 206
10.6. Concluding remarks 207

10.7. Bibliography 207

Chapter 11. Optic Flow-Based Vision System for Autonomous 3D Localization and Control of Small Aerial Vehicles 209
Farid KENDOUL, Isabelle FANTONI and Kenzo NONAMI

11.1. Introduction 209
11.2. Related work and the proposed 3NKF framework 210
11.2.1. Optic flow computation 210
11.2.2. Structure from motion problem 212
11.2.3. Bioinspired vision-based aerial navigation 213
11.2.4. Brief description of the proposed framework 213
11.3. Prediction-based algorithm with adaptive patch for accurate and efficient optic flow calculation 215
11.3.1. Search center prediction 215
11.3.2. Combined block-matching and differential algorithm 216
11.3.2.1. Nominal OF computation using a block-matching algorithm (BMA) 216
11.3.2.2. Subpixel OF computation using a differential algorithm (DA) 217
11.4. Optic flow interpretation for UAV 3D motion estimation and obstacles detection (SFM problem) 219
11.4.1. Imaging model 219
11.4.2. Fusion of OF and angular rate data 220
11.4.3. EKF-based algorithm for motion and structure estimation 221
11.5. Aerial platform description and real-time implementation 223
11.5.1. Quadrotor-based aerial platform 223
11.5.2. Real-time software 225
11.6. 3D flight tests and experimental results 227
11.6.1. Experimental methodology and safety procedures 227
11.6.2. Optic flow-based velocity control 227
11.6.3. Optic flow-based position control 229
11.6.4. Fully autonomous indoor flight using optic flow 231
11.7. Conclusion and future work 233
11.8. Bibliography 234

Chapter 12. Real-Time Stabilization of an Eight-Rotor UAV Using Stereo Vision and Optical Flow 237
Hugo ROMERO, Sergio SALAZAR and José GÓMEZ

12.1. Stereo vision 238
12.2. 3D reconstruction 242
12.3. Keypoints matching algorithm 245
12.4. Optical flow-based control 245
12.4.1. Lucas-Kanade approach 247

12.5. Eight-rotor UAV 249
12.5.1. Dynamic model 249
12.5.1.1. Translational subsystem model 251
12.5.1.2. Rotational subsystem model 255
12.5.2. Control strategy 257
12.5.2.1. Attitude control 257
12.5.2.2. Horizontal displacements and altitude control 258
12.6. System concept 259
12.7. Real-time experiments 260
12.8. Bibliography 263

Chapter 13. Three-Dimensional Localization 265
Juan Gerardo CASTREJON-LOZANO and Alejandro DZUL

13.1. Kalman filters 266
13.1.1. Linear Kalman filter 266
13.1.2. Extended Kalman filter 269
13.1.3. Unscented Kalman filter 270
13.1.3.1. UKF algorithm 271
13.1.3.2. Additive UKF algorithm 274
13.1.3.3. Square-root UKF algorithm 275
13.1.3.4. Additive square-root UKF algorithm 277
13.1.4. Spherical simplex sigma-point Kalman filters 278
13.1.4.1. Spherical simplex sigma-point approach 278
13.1.4.2. Spherical simplex UKF algorithm 280
13.1.4.3. Additive SS-UKF Algorithm 282
13.1.4.4. Square-root SS-UKF algorithm 283
13.1.4.5. Square-root additive SS-UKF algorithm 284
13.2. Robot localization 285
13.2.1. Types of localization 285
13.2.1.1. Dead reckoning (navigation systems) 285
13.2.1.2. A priori map-based localization 285
13.2.1.3. Simultaneous localization and mapping (SLAM) 286
13.2.2. Inertial navigation theoretical framework 286
13.2.2.1. Navigation equations in the navigation frame 287
13.3. Simulations 289
13.3.1. Quad-rotor helicopter 289
13.3.2. Inertial navigation simulations 290
13.3.3. Conclusions 296
13.4. Bibliography 297

Chapter 14. Updated Flight Plan for an Autonomous Aircraft in a Windy Environment 301
Yasmina BESTAOUI and Fouzia LAKHLEF

14.1. Introduction 301

14.2. Modeling 304
14.2.1. Down-draft modeling 304
14.2.2. Translational dynamics 305
14.3. Updated flight planning 308
14.3.1. Basic problem statement 310
14.3.2. Hierarchical planning structure 311
14.4. Updates of the reference trajectories: time optimal problem 312
14.5. Analysis of the first set of solutions S1 315
14.6. Conclusions 323
14.7. Bibliography 323
