

SECOND EDITION

SENSOR ARRAY SIGNAL PROCESSING

PRABHAKAR S. NAIDU

CRC Press
Taylor & Francis Group

Contents

Prologue from First Edition.....	xv
Prologue for Second Edition.....	xix
Acknowledgments.....	xxi
1. An Overview of Wavefields.....	1
1.1 Types of Wavefields and Governing Equations.....	1
1.1.1 Acoustic Field	2
1.1.2 Mechanical Waves in Solids	2
1.1.3 EM Fields.....	6
1.1.4 Properties of Wavefields	9
1.1.5 Sensing of Wavefields.....	9
1.2 Wavefield in Open Space	10
1.2.1 Fourier Representation of Wavefield.....	11
1.2.2 Domain of Propagation.....	13
1.2.3 Apparent Propagation Speed	13
1.2.4 Continuation of Wavefield.....	16
1.2.5 Point Source.....	16
1.2.6 Spatial Sampling and Aliasing	19
1.2.7 Dispersion	21
1.3 Wavefield in Bounded Space	22
1.3.1 Ray Propagation.....	23
1.3.1.1 Polarization in the Plane of Incidence	26
1.3.2 Propagation in Channel: Ray Theory	26
1.3.3 Propagation in Channel: Normal Mode Theory	29
1.3.4 Propagation through Layered Medium.....	31
1.4 Stochastic Wavefield	33
1.4.1 Frequency Wavenumber Spectrum.....	35
1.4.2 Open Space	35
1.4.3 Channel	38
1.5 Multipath Propagation	41
1.5.1 Random Filter Model.....	43
1.5.2 Point Scatterers.....	44
1.5.2.1 Delay Diversity	45
1.5.2.2 Angular Diversity.....	46
1.5.2.3 Doppler Shift.....	46
1.6 Propagation through Random Medium.....	48
1.6.1 Acoustic Field	48
1.6.2 Far-Field Approximation	51
1.6.3 Multisource Illumination	52
1.6.4 Scattering of EM Field	55
1.7 Exercises	57

2. Sensor Array Systems	61
2.1 Uniform Linear Array	61
2.1.1 Array Response	61
2.1.2 Array Steering	65
2.1.3 Broadband Source	67
2.1.3.1 Angular Spectrum	68
2.1.3.2 Slant Stacking	70
2.1.4 Matrix Formulation	72
2.1.4.1 Representation of Narrowband Signals	72
2.1.4.2 Matrix	74
2.1.5 Nonuniform Linear Arrays	78
2.1.5.1 Redundant Sensors	78
2.1.5.2 Missing Sensors	80
2.1.5.3 Random Array	83
2.1.6 Flexible Array	85
2.2 Planar Array	87
2.2.1 UPA	88
2.2.1.1 Random Array	91
2.2.2 UCA	92
2.2.2.1 Steering Vector	97
2.2.2.2 Boundary Array	98
2.2.3 Distributed Dipoles	100
2.2.3.1 Electric Dipole Array	102
2.3 Distributed Sensor Array	104
2.3.1 Wired Distributed Sensor Array	104
2.3.2 Ad-hoc Sensor Network	107
2.3.3 Multidimensional Scaling (MDS)	110
2.4 Broadband Sensor Array	112
2.4.1 Bandwidth of Array	113
2.4.2 Broadband Signals	115
2.5 Source and Sensor Arrays	117
2.5.1 Coarray	118
2.5.2 Passive Imaging	122
2.5.3 Synthetic Aperture	123
2.6 Multicomponent Sensor Array	127
2.6.1 Acoustic Vector Sensor	127
2.6.2 Seismic Vector Sensor	130
2.6.3 Electromagnetic Vector Sensor	132
2.7 Exercises	135
3. Frequency Wavenumber Processing	139
3.1 Digital Filters in the ω - k Domain	139
3.1.1 Two-Dimensional Filters	140
3.1.2 Fan Filters	141
3.1.3 Fast Algorithm	142

3.1.4	Quadrant Filter.....	146
3.1.5	Weighted Least Squares Filter.....	150
3.1.6	Aliasing Effect in Fan Filter and Quadrant Filter	152
3.2	Mapping of 1D into 2D Filters.....	154
3.2.1	McClellan's Transformation	154
3.2.2	Fan Filter.....	158
3.3	Multichannel Wiener Filters.....	159
3.3.1	Planar Array	160
3.3.2	Frequency Domain	163
3.3.3	Constrained Minimization.....	165
3.4	Wiener Filters for Uniform Linear Array (ULA) and (UCA).....	167
3.4.1	ULA.....	167
3.4.2	Uniform Circular Array.....	169
3.4.3	Robustification.....	171
3.4.4	Levinson–Durbin Algorithm.....	173
3.5	Predictive Noise Cancellation.....	177
3.5.1	Signal Source in Near Field.....	177
3.5.1.1	Some Special Cases	179
3.5.2	Source in Far Field	180
3.5.3	Adaptive Filter.....	184
3.6	Exercises	186

4. Source Localization: Frequency Wavenumber

	Spectrum.....	189
4.1	Frequency Wavenumber Spectrum.....	189
4.1.1	Spectral Representation of the Wavefield.....	190
4.1.2	Aliasing	191
4.1.3	Spectral Matrix.....	194
4.1.3.1	Propagation Matrix	196
4.1.4	Eigenstructure.....	197
4.1.5	Frequency Wavenumber Spectrum.....	198
4.1.6	Parametric Spectrum.....	199
4.2	Beamformation.....	200
4.2.1	Narrowband Beamformation.....	200
4.2.1.1	Narrowband Signals	201
4.2.1.2	Window.....	201
4.2.1.3	Rayleigh Resolution.....	202
4.2.1.4	Sources of Error	205
4.2.2	Broadband Beamformation.....	206
4.2.2.1	Delayed Snapshots	206
4.3	Capon's ω -k Spectrum.....	209
4.3.1	Special Case	211
4.3.2	Resolution	211
4.3.3	Robust Beamformation	214

4.3.4	High-Resolution Capon Spectrum	216
4.4	ME ω -k Spectrum.....	218
4.4.1	ME	219
4.4.2	Resolution	222
4.4.3	Finite Data Effects.....	225
4.4.4	Iterative Inversion of Spectral Matrix	225
4.5	Doppler-Azimuth Processing.....	227
4.5.1	Sidelooking Array.....	227
4.5.2	Space-Time Filtering.....	229
4.6	Exercises	231
5.	Source Localization: Subspace Methods	235
5.1	Subspace Methods (Narrowband).....	235
5.1.1	MUSIC	236
5.1.1.1	Signal Eigenvalues and Source Power.....	238
5.1.1.2	Aliasing.....	238
5.1.2	Correlated Sources.....	241
5.1.3	Direct Estimation.....	245
5.1.3.1	Pisarenko's Method.....	246
5.1.3.2	Root Music.....	246
5.1.3.3	Subspace Rotation	248
5.1.4	Diffused Source.....	250
5.1.5	Adaptive Subspace.....	252
5.2	Subspace Methods (Broadband)	253
5.2.1	Wideband Focusing.....	254
5.2.2	Spatial Resampling.....	257
5.2.3	STCM	259
5.2.4	Number of Sources	261
5.3	Coded Signals.....	263
5.3.1	Multitone Signal.....	264
5.3.2	Binary Phase Shift Keying Signal	267
5.3.2.1	Precorrelation Covariance Matrix.....	269
5.3.2.2	Postcorrelation Covariance Matrix	270
5.3.3	Cyclostationary Signals.....	273
5.3.4	Constant Modulus (CM) Signals	276
5.4	Array Calibration	279
5.4.1	Amplitude and Phase Variation of a Sensor.....	279
5.4.2	Mutual Coupling.....	280
5.4.3	Shape Estimation	283
5.5	Source in Bounded Space.....	284
5.5.1	Single Reflecting Surface	285
5.5.2	Two Reflecting Surfaces	286
5.6	Azimuth/Elevation Estimation.....	289
5.6.1	Circular Array	289
5.6.2	L-Shaped Array of Crossed Dipoles	292

5.6.3	ESPRIT Algorithm	293
5.6.4	Pairing Algorithm.....	294
5.7	Exercises	296
6.	Source Estimation.....	301
6.1	Wiener Filters.....	301
6.1.1	Filter Output	302
6.1.1.1	Array Gain.....	303
6.1.2	Two Source Case	303
6.1.3	Linear Least Squares Estimate (LLSE).....	306
6.1.3.1	Circular Array.....	308
6.1.4	Effects of Errors in DOA	309
6.2	Minimum Variance (Capon Method).....	311
6.2.1	Extended Source	312
6.2.2	Single Point Source Case.....	313
6.2.3	Two Source Case	314
6.3	Adaptive Beamformation.....	317
6.3.1	Null Steering.....	317
6.3.2	Beam-Steered Adaptive Array.....	318
6.3.3	Adaptive Capon Filter	321
6.4	Wideband Adaptive Beamformation	322
6.4.1	Constrained Least Mean Square (LMS) Problem.....	323
6.4.2	Beam Pattern.....	325
6.4.3	Frost's Adaptive Algorithm.....	327
6.4.4	Generalized Sidelobe Canceler (GSC).....	329
6.4.5	Griffiths' Adaptive Beamformer.....	333
6.5	FI Beamforming	334
6.5.1	Fan Filter as FI Beamformer	335
6.5.2	Design of Fan Filter via Mapping	336
6.5.3	Frequency-Scaled Continuous Sensor	338
6.5.4	Discrete Approximation	340
6.5.4.1	FI Array	342
6.5.5	Frequency Independent Capon Beamformer	344
6.6	Exercises	347
7.	Multipath Channel.....	349
7.1	Overlapping Echoes.....	349
7.1.1	Estimation of Delays and Attenuation.....	350
7.1.1.1	Capon's Minimum Variance Method	352
7.1.2	Correlated Echoes	354
7.1.3	Unknown Echoes.....	360
7.1.4	Cluster of Sensors	364
7.2	Discrete Channel.....	369
7.2.1	Reflections from Large Obstacles	370
7.2.1.1	Uncorrelated Multipaths	371

7.2.1.2	Correlated Multipaths.....	373
7.2.2	Duct Propagation	377
7.2.2.1	Known Channel.....	378
7.2.2.2	Partially Known Channel	381
7.3	Scatter Channel	385
7.3.1	Geometrical Model	385
7.3.2	Scatterers around Mobile.....	387
7.3.3	Scatterers around Base Station.....	391
7.4	Channel Estimation	392
7.4.1	Time and Frequency Selective	392
7.4.2	Frequency Selective (Time-Nonselective)	393
7.4.3	Time Selective (Frequency Nonselective).....	393
7.4.4	Constant	393
7.4.5	Single Input Single Output.....	394
7.4.6	Single Input Multiple Outputs (SIMOs) Channel	395
7.4.7	Blind Channel Estimation	397
7.4.8	Multiple Input Multiple Output Channel	399
7.5	Exercises	403
8.	Wireless Communications.....	409
8.1	Beamformation.....	409
8.1.1	Co-Channel Interference	410
8.1.2	Estimation of all Direction Vectors	410
8.1.3	Simulation Results	411
8.1.4	Beamforming with Cyclostationary Signals.....	412
8.1.5	Cyclic adaptive Beamforming.....	413
8.2	Multipath Communication Channel.....	417
8.2.1	Small Delay Spread Channel	418
8.2.2	Large Delay Spread Channel	421
8.3	Symbol Estimation.....	424
8.3.1	Small Delay Spread.....	424
8.3.2	Bit Error Rate (BER)	425
8.3.3	Large Delay Spread	427
8.3.4	Augmentation of Data Matrix.....	430
8.3.5	Estimation of Filter Matrix	431
8.4	Exercises	433
9.	Tomographic Imaging.....	437
9.1	Radiation	437
9.1.1	Absorption.....	438
9.1.2	Filtered Backprojection Algorithm.....	440
9.1.3	Algebraic Reconstruction	442
9.1.3.1	Borehole Tomography.....	444
9.1.3.2	Source/Sensor Array Design.....	445
9.2	Diffraction Radiation.....	447

9.2.1	Linear Array	448
9.2.2	Filtered Backpropagation Algorithm	449
9.2.3	Multisource Illumination	451
9.2.3.1	Circular Array	452
9.2.3.2	Verification of FDT	453
9.2.4	Bilinear Interpolation Algorithm	454
9.2.5	Imaging with a Circular Array	456
9.3	Broadband Illumination.....	456
9.3.1	Spectrum Coverage	457
9.3.2	Signal Processing Issues	460
9.3.3	Cross-Borehole Tomography	462
9.3.4	Maximum Entropy Extrapolation	464
9.4	Reflection Tomography	466
9.4.1	Line Integral	468
9.4.2	Spherical Wavefronts.....	470
9.5	Object Shape Estimation	472
9.5.1	Fourier Transform of Binary Convex Polygonal Object	473
9.5.2	Pairing Algorithm.....	475
9.5.3	Performance Analysis	478
9.6	Exercises	479
10.	Imaging by Wavefield Extrapolation	483
10.1	Migration	483
10.1.1	Imaging Conditions.....	484
10.1.2	Downward Continuation of Sources and Sensors	485
10.2	Exploding Reflector Model	486
10.2.1	Initial Value Problem	487
10.3	Extrapolation in ω - k Plane	488
10.3.1	Downward Continuation.....	489
10.3.2	Layered Medium	490
10.3.3	Sloping Interface.....	492
10.3.4	Depropagation of Wavefield	493
10.3.5	Relation to Diffraction Tomography	496
10.3.6	Continuation of Sources and Sensors	497
10.4	Focused Beam	497
10.4.1	Zero-Offset Wavefield	498
10.4.1.1	CDP	498
10.4.2	Layered Medium	501
10.4.3	Focusing	503
10.4.4	Depth of Focus.....	505
10.4.5	Inclined Reflector	505
10.4.6	Relation between Focusing and Downward Extrapolation.....	508
10.4.7	Focused Beamformation for Imaging	508

10.5	Estimation of Wave Speed.....	510
10.5.1	Wave Speed from CDP Gathers	510
10.5.1.1	Interval Speed.....	510
10.5.2	Estimation in the Presence of Errors.....	511
10.5.2.1	Maximum Likelihood	512
10.5.3	Focusing with Optimum Wave Speed	514
10.6	Exercises.....	516

Index.....	519
