

# Solid oxide fuel cell technology

Principles, performance and operations

Kevin Huang and John B. Goodenough

<i>Author contact details</i>	<i>ix</i>
<i>Preface</i>	<i>xi</i>
1	Introduction to solid oxide fuel cells (SOFCs) 1
1.1	A brief history of the solid oxide fuel cell (SOFC) 1
1.2	Advantages of the solid oxide fuel cell 4
1.3	Applications of solid oxide fuel cells 5
1.4	Solid oxide fuel cell components and functionality 6
1.5	Solid oxide fuel cell designs 7
2	Thermodynamics of the solid oxide fuel cell (SOFC) 10
2.1	Electromotive force (EMF) and Gibbs free energy change ( $\Delta G$ ) 10
2.2	Effect of concentration on electromotive force (EMF) 11
2.3	Heat effects in a galvanic cell 14
2.4	The temperature coefficient of electromotive force (EMF) 16
2.5	The pressure coefficient of electromotive force (EMF) 17
2.6	The thermal and chemical expansion coefficients 19
3	Electronic properties of solids for solid oxide fuel cells (SOFCs) 23
3.1	General considerations 23
3.2	Redox $4f^n$ energies and polaronic conduction 25
3.3	Ligand-field d-electron energies 26
3.4	Localized versus itinerant d electrons 29
3.5	Applications 32
4	Transport of charged particles in a solid oxide fuel cell (SOFC) 41
4.1	General bulk transport theory 41
4.2	Effect of electronic conduction in electrolyte on electromotive force (EMF) 47

4.3	Application to electrolyte: steady-state $P_{O_2}$ distribution	50
4.4	Application to electrolyte: electronic leakage current density	55
4.5	Application to interconnect: steady-state $P_{O_2}$ distribution	57
4.6	Application to interconnect: ionic leakage current density	62
4.7	Pressure effect on electronic leakage current density in the electrolyte	63
5	Oxide-ion electrolytes in solid oxide fuel cells (SOFCs)	67
5.1	Quality criteria	67
5.2	Phenomenology	69
5.3	Random-walk theory	73
5.4	Fluorites	74
5.5	Perovskites	79
5.6	Other oxides	82
6	Current, gas flow, utilization, and energy balance in a solid oxide fuel cell (SOFC)	85
6.1	Introduction	85
6.2	Fuel flow, current, and fuel utilization	86
6.3	Air flow, current, and oxygen utilization	87
6.4	Fuel consumption	88
6.5	Calculating stack fuel composition of reformed natural gas	90
6.6	Energy balance in a solid oxide fuel cell system	92
7	Voltage losses in a solid oxide fuel cell (SOFC)	98
7.1	Ohmic polarization	98
7.2	Activation polarization	101
7.3	Concentration polarization	110
7.4	A combined activation and concentration polarization of the cathode	125
7.5	Distributions of electromotive force and current density	127
7.6	Effect of leakage flux on the voltage–current curve	136
8	Direct current (DC) electrical efficiency and power of a solid oxide fuel cell (SOFC)	141
8.1	Direct current electrical efficiency	141
8.2	Efficiency, fuel utilization, and electrical power	148
8.3	The maximum direct current electrical efficiency	150
8.4	Effect of the system pressure on direct current electrical efficiency	154

9	Performance characterization techniques for a solid oxide fuel cell (SOFC) and its components	156
9.1	Electrochemical impedance spectroscopy	156
9.2	Galvanic current interruption	163
9.3	Voltage–current curve characterizations	165
9.4	‘Helium–oxygen shift’	166
9.5	Fuel sensitivity	170
9.6	Determination of fuel loss	173
9.7	Electrical conductivity and sheet resistance measurements	177
9.8	Determination of porosity and density of a porous ceramic body	179
9.9	Diffusivity and diffusion conductance measurements	180
10	Steam methane reforming and carbon formation in solid oxide fuel cells (SOFCs)	183
10.1	Introduction	183
10.2	Thermodynamics of steam methane reforming	184
10.3	Partial pressure of oxygen ( $P_{O_2}$ ) and Nernst potential ( $E$ ) of the steam-reformed methane	189
10.4	Kinetics of steam methane reforming	191
10.5	Carbon formation: thermodynamics versus kinetics	193
11	Poisoning of solid oxide fuel cell (SOFC) electrodes	197
11.1	Sulfur poisoning of the anode	197
11.2	Silica poisoning of the anode	202
11.3	Phosphorus poisoning of the anode	207
11.4	Chromium poisoning of the cathode	213
12	Materials for solid oxide fuel cells (SOFCs)	220
12.1	ZrO <sub>2</sub> -based solid oxide fuel cells	220
12.2	CeO <sub>2</sub> -based solid oxide fuel cells	233
12.3	LaGaO <sub>3</sub> -based solid oxide fuel cells	242
12.4	Interconnects and cell-to-cell connectors	248
12.5	Fabrication techniques	257
12.6	Conclusions	265
