Introduction to Geographic Information Systems

Kang-Tsung Chang
CONTENTS

Preface xiii

CHAPTER 1

INTRODUCTION 1

1.1 GIS 1
  1.1.1 Components of a GIS 2
  1.1.2 A Brief History of GIS 3
  1.1.3 GIS Software Products 3
    Box 1.1 A List of GIS Software Producers and Their Main Products 4
1.2 GIS Applications 4
1.3 Geospatial Data 5
  1.3.1 Coordinate Systems 5
    Box 1.2 Google Maps, Microsoft Virtual Earth, and Yahoo! Maps 6
    Box 1.3 Monitoring by GPS 6
  1.3.2 Vector Data Model 6
  1.3.3 Raster Data Model 8
1.4 GIS Operations 8
  1.4.1 Data Acquisition 8
  1.4.2 Attribute Data Management 8
  1.4.3 Data Display 9
  1.4.4 Data Exploration 9
  1.4.5 Data Analysis 9
  1.4.6 GIS Models and Modeling 10
1.5 Organization of This Book 11
1.6 Concepts and Practice 12
Key Concepts and Terms 13
Review Questions 13
Applications: Introduction 14
  Task 1: Introduction to ArcCatalog 14

CHAPTER 2

COORDINATE SYSTEMS 18

2.1 Geographic Coordinate System 19
  2.1.1 Approximation of the Earth 20
  2.1.2 Datum 21
    Box 2.1 NGS Benchmark Database 21
2.2 Map Projections 23
  2.2.1 Types of Map Projections 23
    Box 2.2 How to Measure Distances on the Earth’s Surface 23
  2.2.2 Map Projection Parameters 24
2.3 Commonly Used Map Projections 26
  2.3.1 Transverse Mercator 27
  2.3.2 Lambert Conformal Conic 27
  2.3.3 Albers Equal-Area Conic 28
  2.3.4 Equidistant Conic 28
2.4 Projected Coordinate Systems 28
    Box 2.3 Map Scale 29
  2.4.1 The Universal Transverse Mercator (UTM) Grid System 29
  2.4.2 The Universal Polar Stereographic (UPS) Grid System 30
  2.4.3 The State Plane Coordinate (SPC) System 30
  2.4.4 The Public Land Survey System (PLSS) 31
2.5 Working with Coordinate Systems in GIS 33
  2.5.1 Projection File 33
CHAPTER 3

VECTOR DATA MODEL 41

3.1 Representation of Simple Features 42
   Box 3.1 Geodatabase, Shapefile, and Coverage for ESRI Software 42

3.2 Topology 43
   3.2.1 TIGER 43
      Box 3.2 Adjacency and Incidence 44
   3.2.2 Importance of Topology 45
      Box 3.3 Topology or No Topology 46

3.3 Georelational Data Model 46
   3.3.1 The Coverage 46
   3.3.2 Coverage Data Structure 47
   3.3.3 Non-topological Vector Data 48

3.4 Object-Based Data Model 49
   3.4.1 Classes and Class Relationships 49
   3.4.2 Interface 50
      Box 3.4 How to Use an Interface 51
      Box 3.5 ArcObjects and ArcGIS 51

3.4.3 The Geodatabase 51
3.4.4 Topology Rules 52
3.4.5 Advantages of the Geodatabase 53
   Box 3.6 NHDinGEO 53

3.5 Representation of Composite Features 54
   3.5.1 TINs 54
   3.5.2 Regions 55
   3.5.3 Routes 56

CHAPTER 4

RASTER DATA MODEL 65

4.1 Elements of the Raster Data Model 66
   4.1.1 Cell Value 66
      Box 4.1 Rules in Determining a Categorical Cell Value 67
   4.1.2 Cell Size 67
   4.1.3 Raster Bands 67
   4.1.4 Spatial Reference 67

4.2 Types of Raster Data 68
   4.2.1 Satellite Imagery 68
   4.2.2 USGS Digital Elevation Models (DEMs) 69
      Box 4.2 No-Data Slivers in a 7.5-minute DEM 70
   4.2.3 Non-USGS DEMs 71
   4.2.4 Global DEMs 71
   4.2.5 Digital Orthophotos 72
   4.2.6 Bi-Level Scanned Files 72
   4.2.7 Digital Raster Graphics (DRGs) 73
   4.2.8 Graphic Files 73
   4.2.9 GIS Software-Specific Raster Data 73

4.3 Raster Data Structure 74
   4.3.1 Cell-by-Cell Encoding 74
   4.3.2 Run-Length Encoding 74
   4.3.3 Quad Tree 75
   4.3.4 Header File 76
      Box 4.3 A Header File Example 76

4.4 Raster Data Compression 77
   Box 4.4 A Simple Wavelet Example: The Haar Wavelet 78
CHAPTER 5

GIS DATA ACQUISITION 87

5.1 Existing GIS Data 88
   5.1.1 Federal Geographic Data Committee 88
   5.1.2 Geospatial One-Stop 88
   5.1.3 U.S. Geological Survey 88
       Box 5.1 Clearinghouse and Portal 89
   5.1.4 U.S. Census Bureau 89
   5.1.5 Natural Resources Conservation Service 90
   5.1.6 Statewide Public Data: An Example 90
   5.1.7 Regional Public Data: An Example 90
   5.1.8 Metropolitan Public Data: An Example 90
   5.1.9 County-Level Public Data: An Example 90
   5.1.10 GIS Data from Private Companies 90

5.2 Metadata 91

5.3 Conversion of Existing Data 91
   5.3.1 Direct Translation 91
       Box 5.2 ISO Metadata Standards 91
   5.3.2 Neutral Format 92

5.4 Creating New Data 93
   5.4.1 Remotely Sensed Data 93
       Box 5.3 Importing DLG, SDTS, TIGER, and VPF Files in ArcGIS 93
   5.4.2 Field Data 94
       Box 5.4 An Example of GPS Data 95
   5.4.3 Text Files with x-, y-Coordinates 97
   5.4.4 Digitizing Using a Digitizing Table 97
   5.4.5 Scanning 98
       Box 5.5 Vectorization Settings in ArcGIS 101

5.4.6 On-Screen Digitizing 101
   5.4.7 Importance of Source Maps 101

Key Concepts and Terms 102

Review Questions 103

Applications: GIS Data Application 104
   Task 1: Download and Process DEM and DLG from the Internet 104
   Task 2: Digitize On-Screen in ArcMap 105
   Task 3: Add XY Data in ArcMap 106
   Task 4: Access California Watersheds on the Geography Network Map Server 107

Challenge Task 107

References 108

CHAPTER 6

GEOMETRIC TRANSFORMATION 109

6.1 Geometric Transformation 110
   6.1.1 Map-to-Map and Image-to-Map Transformation 110
   6.1.2 Transformation Methods 110
   6.1.3 Affine Transformation 111
   6.1.4 Control Points 112
       Box 6.1 Estimation of Transformation Coefficients 113
       Box 6.2 Output from an Affine Transformation 113

6.2 Root Mean Square (RMS) Error 114
       Box 6.3 RMS from an Affine Transformation 115

6.3 Interpretation of RMS Errors on Digitized Maps 115

6.4 Resampling of Pixel Values 117
   6.4.1 Resampling Methods 117
   6.4.2 Other Uses of Resampling 117
       Box 6.4 Computation for Bilinear Interpolation 118
       Box 6.5 Pyramiding 118

Key Concepts and Terms 118

Review Questions 119

Applications: Geometric Transformation 120
   Task 1: Georeference and Rectify a Scanned Map 120
   Task 2: Use ArcScan to Vectorize Raster Lines 121
CHAPTER 9

DATA DISPLAY AND CARTOGRAPHY 168

9.1 Cartographic Representation 169
9.1.1 Spatial Features and Map Symbols 170
9.1.2 Use of Color 171
9.1.3 Data Classification 172
9.1.4 Generalization 172

9.2 Types of Quantitative Maps 173
   Box 9.1 Representations 173
   Box 9.2 Locating Dots on a Dot Map 175
   Box 9.3 Mapping Derived and Absolute Values 175

9.3 Typography 176
9.3.1 Type Variations 176
9.3.2 Selection of Type Variations 177
9.3.3 Placement of Text in the Map Body 177
   Box 9.4 Options for Dynamic Labeling 179

9.4 Map Design 180
9.4.1 Layout 180
   Box 9.5 Wizards for Adding Map Elements 183
9.4.2 Visual Hierarchy 184

9.5 Map Production 185
   Box 9.6 Working with Soft-Copy Maps 186
   Box 9.7 A Web Tool for Making Color Maps 188

Key Concepts and Terms 188
Review Questions 189

Applications: Data Display and Cartography 190
   Task 1: Make a Choropleth Map 190
   Task 2: Use Graduated Symbols, Line Symbols, Highway Shield Symbols, and Text Symbols 192
   Task 3: Label Streams 195
   Challenge Task 196

References 196

CHAPTER 10

DATA EXPLORATION 198

10.1 Data Exploration 199
10.1.1 Descriptive Statistics 199
   Box 10.1 Data Visualization 199
10.1.2 Graphs 200
   Box 10.2 Descriptive Statistics 200
10.1.3 Dynamic Graphics 203

10.2 Map-Based Data Manipulation 204
10.2.1 Data Classification 204
   Box 10.3 Geovisualization 204
10.2.2 Spatial Aggregation 205
10.2.3 Map Comparison 205

10.3 Attribute Data Query 206
10.3.1 SQL (Structured Query Language) 207
   Box 10.4 Query Methods in ArcGIS 207
10.3.2 Query Expressions 208
10.3.3 Type of Operation 209
10.3.4 Examples of Query Operations 210
10.3.5 Relational Database Query 210

10.4 Spatial Data Query 211
10.4.1 Feature Selection by Cursor 211
10.4.2 Feature Selection by Graphic 211
10.4.3 Feature Selection by Spatial Relationship 212
10.4.4 Combining Attribute and Spatial Data Queries 212
   Box 10.5 Expressions of Spatial Relationships in ArcMap 213

10.5 Raster Data Query 213
10.5.1 Query by Cell Value 213
10.5.2 Query by Select Features 214

Key Concepts and Terms 214
Review Questions 215

Applications: Data Exploration 215
   Task 1: Select Feature by Location 216
   Task 2: Make Dynamic Chart 216
   Task 3: Query Attribute Data from a Joint Attribute Table 217
   Task 4: Query Attribute Data from a Relational Database 218
   Task 5: Combine Spatial and Attribute Data Queries 218
   Task 6: Query Raster Data 219
   Challenge Task 219

References 220
CHAPTER 11

VECTOR DATA ANALYSIS 222

11.1 Buffering 223
   11.1.1 Variations in Buffering 223
   Box 11.1 Riparian Buffer Width 224
   11.1.2 Applications of Buffering 225
11.2 Overlay 225
   11.2.1 Feature Type and Overlay 226
   11.2.2 Overlay Methods 227
   11.2.3 Overlay of Shapefiles 228
   11.2.4 Slivers 228
   Box 11.2 Overlay Methods in ArcGIS 228
   11.2.5 Error Propagation in Overlay 230
   11.2.6 Applications of Overlay 230
   Box 11.3 Error Propagation Models 230
11.3 Distance Measurement 231
   Box 11.4 Distance Measurement Using ArcGIS 232
11.4 Pattern Analysis 232
   11.4.1 Point Pattern Analysis 232
   11.4.2 Moran’s I for Measuring Spatial Autocorrelation 233
   11.4.3 G-Statistic for Measuring High/Low Clustering 235
   11.4.4 Applications of Pattern Analysis 236
11.5 Feature Manipulation 237
   Box 11.5 Feature Manipulation Using ArcGIS 237
Key Concepts and Terms 240
Review Questions 241
Applications: Vector Data Analysis 241
   Task 1: Perform Buffering and Overlay 242
   Task 2: Overlay Multicomponent Polygons 243
   Task 3: Measure Distances between Points and Lines 243
   Task 4: Compute General and Local G-Statistics 244
   Challenge Task 244
References 245

CHAPTER 12

RASTER DATA ANALYSIS 248

12.1 Data Analysis Environment 249
12.2 Local Operations 249

Box 12.1 How to Make an Analysis Mask 249

12.2.1 Local Operations with a Single Raster 250
12.2.2 Reclassification 250
12.2.3 Local Operations with Multiple Rasters 250
12.2.4 Applications of Local Operations 252
   Box 12.2 Local Operations in ArcGIS 252
12.3 Neighborhood Operations 253
   12.3.1 Neighborhood Statistics 253
   Box 12.3 Neighborhood Operations in ArcGIS 254
   12.3.2 Applications of Neighborhood Operations 254
12.4 Zonal Operations 255
   12.4.1 Zonal Statistics 255
   Box 12.4 More Examples of Neighborhood Operations 256
   12.4.2 Applications of Zonal Operations 256
12.5 Physical Distance Measure Operations 257
   Box 12.5 Zonal Operations in ArcGIS 257
   12.5.1 Allocation and Direction 258
   12.5.2 Applications of Physical Distance Measure Operations 258
   Box 12.6 Distance Measure Operations in ArcGIS 259
12.6 Other Raster Data Operations 259
   12.6.1 Raster Data Management 259
   12.6.2 Raster Data Extraction 260
   12.6.3 Raster Data Generalization 260

12.7 Comparison of Vector- and Raster-Based Data Analysis 261
   12.7.1 Overlay 261
   12.7.2 Buffering 262
Key Concepts and Terms 262
Review Questions 263
Applications: Raster Data Analysis 263
   Task 1: Perform a Local Operation 264
   Task 2: Perform a Combine Operation 264
   Task 3: Perform a Neighborhood Operation 264
   Task 4: Perform a Zonal Operation 265
   Task 5: Measure Physical Distances 265
   Challenge Task 266
References 266
CHAPTER 13

TERRAIN MAPPING AND ANALYSIS 268

13.1 Data for Terrain Mapping and Analysis 269
  13.1.1 DEM 269
  13.1.2 TIN 269
    Box 13.1 Terrain Data Format 270
13.2 Terrain Mapping 271
  13.2.1 Contouring 271
  13.2.2 Vertical Profiling 272
  13.2.3 Hill Shading 272
    Box 13.2 The Pseudoscopic Effect 273
    Box 13.3 A Worked Example of Computing Relative Radiance 273
  13.2.4 Hypsometric Tinting 274
  13.2.5 Perspective View 274
13.3 Slope and Aspect 276
  13.3.1 Computing Algorithms for Slope and Aspect Using Raster 277
    Box 13.4 Conversion of D to Aspect 278
  13.3.2 Computing Algorithms for Slope and Aspect Using TIN 278
    Box 13.5 A Worked Example of Computing Slope and Aspect Using Raster 279
  13.3.3 Factors Influencing Slope and Aspect Measures 279
    Box 13.6 A Worked Example of Computing Slope and Aspect Using TIN 280
13.4 Surface Curvature 281
  Box 13.7 A Worked Example of Computing Surface Curvature 282
13.5 Raster versus TIN 282
  Box 13.8 Terrain Mapping and Analysis Using ArcGIS 283

Key Concepts and Terms 284
Review Questions 284
Applications: Terrain Mapping and Analysis 285
  Task 1: Use DEM for Terrain Mapping 285
  Task 2: Derive Slope, Aspect, and Curvature from DEM 287
  Task 3: Build and Display a TIN 288
Challenges Task 288

References 289

CHAPTER 14

VIEWSHEDS AND WATERSHEDS 291

14.1 Viewshed Analysis 292
  14.1.1 Line-of-Sight Operation 292
  14.1.2 Raster-Based Viewshed Analysis 293
  14.1.3 TIN-Based Viewshed Analysis 293
  14.1.4 Cumulative Viewshed 293
  14.1.5 Accuracy of Viewshed Analysis 293
14.2 Parameters of Viewshed Analysis 294
    Box 14.1 Tools for Selecting Viewpoints 295
    Box 14.2 Parameters for Viewshed Analysis 297
14.3 Applications of Viewshed Analysis 297
14.4 Watershed Analysis 297
    Box 14.3 Watershed Boundary Dataset (WBD) 298
  14.4.1 Filled DEM 298
  14.4.2 Flow Direction 298
  14.4.3 Flow Accumulation 299
  14.4.4 Stream Network 300
  14.4.5 Stream Links 301
  14.4.6 Areawide Watersheds 301
  14.4.7 Point-Based Watersheds 302
    Box 14.4 Snapping Pour Points 303
14.5 Factors Influencing Watershed Analysis 304
14.6 Applications of Watershed Analysis 305
Key Concepts and Terms 306
Review Questions 307
Applications: Viewsheds and Watersheds 307
  Task 1: Perform Viewshed Analysis 307
  Task 2: Create a New Lookout Shapefile for Viewshed Analysis 308
  Task 3: Delineate Areawide Watersheds 309
  Task 4: Derive Upstream Contributing Areas at Pour Points 310
  Challenges Task 311
References 312

CHAPTER 15

SPATIAL INTERPOLATION 315

15.1 Elements of Spatial Interpolation 316
  15.1.1 Control Points 316
  15.1.2 Type of Spatial Interpolation 316
CHAPTER 16

GEOCODING AND DYNAMIC SEGMENTATION 346

16.1 Geocoding 347
  16.1.1 Geocoding Reference Database 347
  16.1.2 The Address Matching Process 348
  16.1.3 Address Matching Options 348
    Box 16.1 Scoring System for Geocoding 349
  16.1.4 Acceptable Matched Rate 350
  16.1.5 Offset Plotting Options 350

16.2 Variations of Geocoding 350

16.3 Applications of Geocoding 351
  16.3.1 Location-Based Services 351
  16.3.2 Business Applications 351
  16.3.3 Wireless Emergency Services 352
  16.3.4 Crime Mapping and Analysis 352
  16.3.5 Public Health 352

16.4 Dynamic Segmentation 352
  16.4.1 Routes 352
    Box 16.2 Linear Location Referencing System 353
  16.4.2 Creating Routes 354
    Box 16.3 Route Feature Classes 354
    Box 16.4 Create Routes Using ArcGIS 355
  16.4.3 Events 356
  16.4.4 Creating Event Tables 356

16.5 Applications of Dynamic Segmentation 358
  16.5.1 Data Management 358
  16.5.2 Data Display 358
  16.5.3 Data Query 358
  16.5.4 Data Analysis 358

Key Concepts and Terms 359
Review Questions 360

Applications: Geocoding and Dynamic Segmentation 360
  Task 1: Geocode Street Addresses 360
  Task 2: Display and Query Routes and Events 361
  Task 3: Analyze Two Event Layers 362
  Task 4: Create a Stream Route and Analyze Slope along the Route 363
  Task 5: Locate Cities along U.S. Interstate 5 364
Challenge Task 364
References 365
CHAPTER 17

PATH ANALYSIS AND NETWORK APPLICATIONS 367

17.1 Path Analysis 368
   17.1.1 Source Raster 368
   17.1.2 Cost Raster 368
   17.1.3 Cost Distance Measures 368
      Box 17.1 Cost Raster for a Site Analysis of Pipelines 368
   17.1.4 Deriving the Least Accumulative Cost Path 369
      Box 17.2 Derivation of the Least Accumulative Cost Path 371
   17.1.5 Improvements for Cost Distance Measures 372
      Box 17.3 Cost Distance Measure Operations in ArcGIS 372

17.2 Applications of Path Analysis 373

17.3 Network 373
   17.3.1 Link and Link Impedance 373
   17.3.2 Junction and Turn Impedance 373
   17.3.3 One-Way or Closed Streets 374
   17.3.4 Overpasses and Underpasses 374

17.4 Putting Together a Network 374
   Box 17.4 Networks in ArcGIS 375
   17.4.1 Gathering Linear Features 375
   17.4.2 Building Topology 375
   17.4.3 Attributing the Network Features 375
      Box 17.5 Network Attributes 376
      Box 17.6 Turn Table and Turn Feature Class 376

17.5 Network Applications 377
   17.5.1 Shortest Path Analysis 377
   17.5.2 Closest Facility 379
   17.5.3 Allocation 379
   17.5.4 Location–Allocation 381
   17.5.5 Urban Transportation Planning Model 383
      Box 17.7 Network Analysis Using ArcGIS 383

Key Concepts and Terms 384
Review Questions 384
Applications: Path Analysis and Network Applications 385
   Task 1: Compute the Least Accumulative Cost Distance 385
   Task 2: Compute the Path Distance 386

Task 3: Run Shortest Path Analysis 386
Task 4: Build a Geodatabase Network Dataset 388
Task 5: Find Closest Facility 389
Task 6: Find Service Area 389
Challenge Task 390
References 390

CHAPTER 18

GIS MODELS AND MODELING 392

18.1 Basic Elements of GIS Modeling 393
   18.1.1 Classification of GIS Models 393
   18.1.2 The Modeling Process 393
   18.1.3 The Role of GIS in Modeling 394
   18.1.4 Integration of GIS and Other Modeling Programs 395

18.2 Binary Models 395

18.3 Index Models 396
   18.3.1 The Weighted Linear Combination Method 396
      Box 18.1 The Conservation Reserve Program 397
      Box 18.2 Geoprocessing Tools in ArcGIS 399
   18.3.2 Other Index Methods 400
   18.3.3 Applications of the Index Model 401

18.4 Regression Models 402
   18.4.1 Linear Regression Models 402
   18.4.2 Logistic Regression Models 402

18.5 Process Models 403
   18.5.1 Soil Erosion Models 403
      Box 18.3 Explanation of the Six Factors in RUSLE 405
   18.5.2 Other Examples of Environmental Models 405
      Box 18.4 Looping in ArcGIS 406

18.5.3 GIS and Process Models 406

Key Concepts and Terms 407
Review Questions 407
Applications: GIS Models and Modeling 408
   Task 1: Build a Vector-Based Binary Model 408
   Task 2: Build a Raster-Based Binary Model 409
   Task 3: Build a Vector-Based Index Model 409
   Task 4: Build a Raster-Based Index Model 411
   Challenge Task 413

References 413
