Foundations for Efficient Web Service Selection

Springer

Contents

1	Introduction	1
1.1	Web Service Foundation	2
1.1.1	Historical Perspective	2
1.1.2	Web Services vs. Data	4
1.1.3	Service Query Optimization	4
1.2	Major Issues in Building a Web Service Foundation	5
1.2.1	Summary of Contributions	8
1.3	Preview of Chapters	10
2	Towards a WSMS: The State of the Art	11
2.1	Scenario	12
2.2	Web Service Reference Model	13
2.3	Web Service Stack	14
2.4	Key Dimensions for Building a WSMS	15
2.5	The WSMS Architecture	19
3	A Foundational Service Framework	25
3.1	Case Study: Car Brokerage	26
3.2	Service Query Model	27
3.3	Service Calculus	34
3.4	Service Query Algebra	36
3.4.1	Algebraic Operators	37
3.4.2	Algebraic Equivalent Rules	40
3.5	Implementing the Algebraic Operators	41
3.5.1	Storing the Service Relations	41
3.5.2	Implementing the Service Algebra	42
3.5.3	Complexity of Service Algebraic Operators	44
3.5.4	Generating SEPs	46
3.6	Service Query Optimization	49
3.6.1	QoWS for SEPs	49
3.6.2	Score Function	49

3.6.3	Optimization Algorithms	50
3.7	Analytical Model	54
3.7.1	DP-based Query Optimization	55
3.7.2	DAC-DP Query Optimization	55
3.8	Experimental Study	56
4	Multi-objective Service Query Optimization	61
4.1	The Service Skyline	62
4.2	<i>Computing Database Skylines: An overview</i>	63
4.2.1	Block Nested Loops Algorithms	63
4.2.2	Divide-and-Conquer Algorithm	64
4.2.3	Bitmap Algorithm	64
4.2.4	Index-based Algorithm	65
4.2.5	Nearest Neighbor Algorithm	67
4.3	Challenges of Computing the SEP Skyline	68
4.4	SEP Skyline Computation	70
4.4.1	Using B-trees	71
4.4.2	Nearest Neighbor Algorithm	72
4.4.3	Extending BBS	74
4.4.4	Operation Graph based Indexing (OGI)	80
4.5	Experimental Study	81
4.5.1	Number of QoWS Attributes	82
4.5.2	Number of Operations per SEP	82
4.5.3	Cardinality of Service Relations	83
4.5.4	Sizes of the SEP Skylines	84
5	Skyline Computation for Multi-Service Query Optimization	87
5.1	Preliminaries	88
5.2	One Pass Algorithm	89
5.3	Dual Progressive Algorithm	91
5.3.1	<i>Basic Progressive Enumeration</i>	91
5.3.2	Node Duplication	92
5.3.3	Parent Table	94
5.3.4	Analysis	95
5.4	<i>A Bottom-Up Approach</i>	100
5.4.1	The Early Pruning Heuristic	100
5.4.2	Linear Composition Plans	101
5.4.3	Complexity Analysis	104
5.5	Experimental Study	105
5.5.1	Efficiency and Scalability	105
5.5.2	Heap Size	107
5.5.3	MEP Skyline Size	108
5.5.4	Discussion	108

6	Skyline Computation over Uncertain QoWS	111
6.1	p-dominant Service Skyline	112
6.2	Preliminaries	115
6.2.1	Problem Definition	116
6.2.2	p-dominant Skyline Vs. p-skyline	117
6.3	Computing the p -dominant Skyline using p -R-tree	120
6.3.1	p-R-tree	121
6.3.2	A Dual Pruning Process	123
6.3.3	Computing the Dominate Probability	124
6.3.4	The Main Memory p-R-tree	125
6.3.5	The Two Phase Algorithm	126
6.3.6	Analysis	127
6.4	Experimental Study	130
6.4.1	Size of the p-dominant skylines	131
6.4.2	Performance and Scalability	132
6.4.3	Pruning Efficiency	133
6.4.4	Computing p-dominant Skyline with $(p + \delta)$ -R-tree	134
7	Related Work	137
7.1	Web Service Querying and Optimization	137
7.2	Evaluation of Web Service Deployment Systems	138
7.2.1	Research Prototypes	139
7.2.2	Discussion of Web Service Deployment Platforms	143
8	Conclusions	147
8.1	Summary	147
8.2	Directions for Future Research	149
8.2.1	Ontology Management for Web Services	149
8.2.2	QoWS Management	149
8.2.3	Service Model Extension	150
8.2.4	Reversed Two-phase Service Query Optimization	150
8.2.5	Subspace Service Skyline	150
8.2.6	Uncertain QoWS Stream Processing	151
8.2.7	Failure Recovery in Service Query Optimization	151
