Advanced Design of Mechanical Systems: From Analysis to Optimization

CISM Courses and Lectures, vol. 511

SpringerWienNewYork

TABLE OF CONTENTS

Preface

1. Planar Multibody Systems	1
1.1. Introduction	1
1.2. Cartesian Coordinates	1
1.3. Kinematic Constraints	4
1.4. Drivers	8
1.5. Solution of the Kinematic Problem	10
1.6. Velocities and Accelerations	13
1.7. Newton's Equation	15
1.8. Forces	17
1.9. Numerical Integration	20
2. Spatial Multibody Systems	23
2.1. Introduction to Spatial Kinematic Constraints	23
2.2. Rotational Coordinates	23
2.3. Kinematic Constraints	27
2.4. Kinematic Joints	30
2.5. Newton-Euler Equations	33
2.6. Forces	36
2.7. Solution of the Equations of Motion	37
3. Synthesis of Mechanisms	39
3.1. Introduction	39
3.2. The Joint Coordinate Method	42
3.3. Optimization Using Time-Varying Design Variables	47
3.4. Optimization Using Dynamics	52
3.5. Synthesis Allowing for Non-Assembly	54
4. Differential-Geometric Aspects of Constrained System Dynamics	67
4.1. Introduction	67
4.2. Unconstrained System Dynamics	67
4.3. Constraint Equations	74
4.4. Constraint Reactions and Constraint Reaction-Induced Dynamic Equations	77
5. Dependent Variable Formulations	83
5.1. Introduction	83
5.2. Governing Equations in DAE Forms	83

5.3.	ODE Forms of the Equations of Motion	89
5.4.	Constraint Violation Problem	91
5.5.	Aspects of Accuracy of Constraint-Consistent Solutions	97
6.	Independent Variable Formulation	107
6.1.	Introduction	107
6.2.	Joint Coordinate Formulation for Open-Loop Systems	107
6.3.	Velocity Partitioning Formulation	112
6.4.	General Projective Scheme for Independent Variable Formulations	117
6.5.	Treatment of Closed-Loop Multibody Systems	120
7.	Other Useful Modeling and Simulation Techniques	131
7.1.	Introduction	131
7.2.	Augmented Lagrangian Formulation	131
7.3.	Augmented Joint Coordinate Method	142
8.	Sensitivity Analysis: Linear Static Spring Systems	151
8.1.	Introduction	151
8.2.	Notation	152
8.3.	Static Analysis	154
8.4.	Solution Strategy	158
8.5.	Finite Element Program	161
8.6.	Sensitivity Analysis	172
8.7.	Sensitivity Computer Program	182
8.8.	Optimization Problems	190
9.	Sensitivity Analysis: Nonlinear Static Spring Systems	195
9.1.	Nonlinear Linear Static Spring Systems	195
9.2.	Newton Raphson Method	197
9.3.	Sensitivity Analysis: Nonlinear Elastic Static Spring Systems	206
9.4.	Transient Problems	216
10.	Sensitivity Analysis: Generalized Coordinate Kinematic Systems	219
10.1.	Position Analysis	219
10.2.	Velocity and Acceleration Analysis	225
10.3.	Inverse Dynamic Analysis	226
10.4.	Sensitivity Analysis	231
10.5.	Conclusion	235

11. Optimization of Mechanical Systems	237
11.1. Introduction	237
11.2. Optimization Algorithms	240
11.3. An Example from Multibody Dynamics	245
11.4. Concluding Remarks	250
12. Using Augmented Particle Swarm Optimization for Constrained Problems in Engineering	253
12.1. The Basic PSO Algorithm	256
12.2. Augmented Lagrange Multiplier Method	257
12.3. Augmented Lagrange Particle Swarm Optimization	260
12.4. Web-Based Optimization with ALPSO	264
12.5. Engineering Example: Hexapod Robot	265
12.6. Concluding Remarks	269
13. Optimization of Mechatronic Systems Using the Software Package NEWOPT/AIMS	273
13.1. Optimization of Mechatronic Systems	274
13.2. Software Package NEWOPT/AIMS	276
13.3. Example: Hexapod Manipulator	280
13.4. Concluding Remarks	284
14. Topology Optimized Synthesis of Planar Kinematic Rigid Body Mechanisms	287
14.1. Topology Representation of Mechanisms	289
14.2. Genetic Algorithms	291
14.3. Kinematic Analysis and Dimensional Synthesis	292
14.4. Topology Optimization of Mechanisms	296
14.5. Concluding Remarks	299
15. Grid-Based Topology Optimization of Rigid Body Mechanisms	303
15.1. Grid Structures for Topology Optimization	304
15.2. Kinematic Analysis	305
15.3. Mechanism Design Using Grid Structures	307
15.4. Amplifier Mechanism Example	313
15.5. Concluding Remarks	313
16. Lumped Deformations: a Plastic Hinge Approach	317
16.1. Introduction	317
16.2. Flexible Multibody Dynamics by Lumped Deformations	319
16.3. Plastic Hinges Constitutive Relations Implementation	322
16.4. Continuous Contact Force Model	324

16.5	Road Vehicle Multibody Model for Crash Analysis	326
16.6	Application to the Design of Railway Dynamics Crash Tests	336
17.	Distributed Deformation: a Finite Element Method	351
17.1	Introduction	351
17.2	Brief Literature Overview	351
17.3	General Deformation of a Flexible Body	354
17.4	Reference Conditions in a Flexible Body: Linear Elastic Deformations	356
17.5	Generalized Elastic Coordinates for Linear Flexible Bodies	358
17.6	Generalized Coordinates for Nonlinear Flexible Bodies	361
17.7	Kinematic Joints Involving Flexible Bodies	362
17.8	Demonstration Examples	368
18.	Optimization of Flexible Multibody Systems	375
18.1	Introduction	375
18.2	Road Vehicle Multibody Model	376
18.3	Road Vehicle Simulations for Comfort and Handling	383
18.4	Vehicle Dynamics Optimization for Comfort and Handling	393
18.5	Minimization of the Maximum Deformation Energy	399
18.6	Sensitivity Analysis in Flexible Multibody Dynamics	401
18.7	Demonstrative Example: Flexible Slider-Crank Mechanism	407
18.8	Optimization of the Deployment of a Satellite Antenna	414
18.9	Conclusions	422
