

Fluorescence Applications in Biotechnology and the Life Sciences

Edited by

EWA M. GOLDYS

 WILEY-BLACKWELL

Preface	xv
Acknowledgments	xxi
About the Contributing Authors	xxiii
1 Basics of Fluorescence	1
<i>Robert P. Learmonth, Scott H. Kable, and Kenneth P. Ghiggino</i>	
1.1 Introduction	1
1.1.1 Properties of Light	2
1.1.2 States of Molecules	5
1.2 Absorption and Emission of Light	9
1.2.1 Interaction of Light with a Molecule	9
1.2.2 Absorption and Emission of Light Depicted on a Perrin–Jablonski Diagram	10
1.2.3 Multiphoton Excitation	11
1.3 Nonradiative Decay Mechanisms	13
1.3.1 Vibrational Relaxation	13
1.3.2 Internal Conversion	14
1.3.3 Intersystem Crossing	14
1.4 Properties of Excited Molecules	16
1.4.1 Quantum Yield	16
1.4.2 Excited-State Lifetime	16
1.5 Spectroscopy and Fluorophores	16
1.5.1 Absorption, Excitation, and Emission Spectra	16
1.5.2 Basic Properties of Fluorophores	19
1.6 Environmental Sensitivity of Fluorophores	20
1.6.1 Quenching of Fluorescence	21
1.6.2 Photobleaching	21
1.6.3 Fluorescence Resonance Energy Transfer	22
1.6.4 Solvent Relaxation	22
1.7 Polarization of Fluorescence	24

1.8	Conclusion	26
	References	26
2	Labeling of Cells with Fluorescent Dyes	27
	<i>Ian S. Harper</i>	
2.1	Introduction	27
2.2	Fluorophore Selection	32
2.3	Loading and Labeling Live Cells	34
	2.3.1 Loading AM Forms	35
	2.3.2 Leakage and Hydrolysis of AM Esters	36
2.4	Fluorophores for Live Cell Imaging	36
	2.4.1 Cell Viability	36
	2.4.2 General Morphology	36
	2.4.3 Specific Organelles	37
	2.4.4 Ionic Environment	38
	2.4.5 Tracers for Membranes and Cells	39
	2.4.6 Fluorescent Proteins	40
	References	41
3	Genetically Encoded Fluorescent Probes: Some Properties and Applications in Life Sciences	47
	<i>Mark Prescott and Anya Salih</i>	
3.1	Introduction	47
3.2	Chromophore and its Formation	49
3.3	“Life and Death” of Fluorescent Protein	54
	3.3.1 Oligomerization	57
	3.3.2 Fusion Proteins	58
	3.3.3 Photobleaching	58
	3.3.4 Destabilization	59
3.4	Applications	60
3.5	Passive Applications	61
	3.5.1 Photoamplifying PAFPs	62
	3.5.2 Photoconverting PAFPs	63
	3.5.3 Kindling PAFPs	64
	3.5.4 Fluorescent Timers	64
3.6	Active Applications	65
	3.6.1 Protein–Protein Interactions	65
	3.6.2 Monitoring Enzyme Activity	66
	3.6.3 Monitoring Small Molecules and Metabolites	66
	3.6.4 Monitoring pH and Other Small Molecules	67
	3.6.5 Monitoring Redox	67
3.7	Interactive Applications	67

3.8	Conclusions	68
	References	69
4	Nanoparticle Fluorescence Probes	75
	<i>Krystyna Drozdowicz-Tomsia and Ewa M. Goldys</i>	
4.1	Introduction	75
4.2	Nanomaterials for Biological Applications	75
4.3	Inorganic Quantum Dots: Physics and Optical Properties	77
4.4	Synthesis of Monodisperse Colloidal Quantum Dots for Biolabeling Applications	81
	4.4.1 Quantum Dot Synthesis	82
	4.4.2 Shell Synthesis	84
	4.4.3 Water Solubilization and Functionalization	85
	4.4.4 Quantum Dot Bioconjugation	88
4.5	Quantum Dots as In Vitro Probes	89
4.6	Quantum Dots as In Vivo Probes	92
4.7	Cytotoxicity	94
4.8	Future Directions	94
	References	95
5	Quantitative Analysis of Fluorescent Image: From Descriptive to Computational Microscopy	99
	<i>Michał Marek Godlewski, Agnieszka Turowska, Paulina Jedynak, Daniel Martínez Puig, and Helena Nevalainen</i>	
5.1	Introduction	99
5.2	Advantages of Quantitative Analysis	100
5.3	Methods of Quantitative Analysis	101
5.4	Image Processing	113
	References	115
6	Spectral Imaging and Unmixing	117
	<i>Pascal Vallotton, Alope Phatak, and Mark Berman</i>	
6.1	Introduction	117
6.2	Instrumentation and Configurations for Hyperspectral Microscopes	119
6.3	Supervised and Unsupervised Unmixing	121
6.4	Supervised or Informed Unmixing	121
6.5	Unsupervised or Blind Unmixing	122
	6.5.1 Iterated Constrained End-Members Algorithm	123
6.6	Spectral Clustering	124
6.7	Examples	125
	6.7.1 Tablet Inspection	125
	6.7.2 Fluorescent Microspheres	127

6.7.3	Induced Mouse Lung Tumor	131
6.8	Limitations of Spectral Imaging and Experimental Considerations	135
6.8.1	Fast Biological Processes	135
6.8.2	Calibration	136
6.8.3	Environmental Sensitivity	137
6.8.4	Background Fluorescence	137
6.9	Conclusions	137
	References	138
7	Correlation of Light with Electron Microscopy: A Correlative Microscopy Platform	141
	<i>Marko Nykänen</i>	
7.1	Introduction	141
7.2	Overview of Techniques Used in Correlative Microscopy	142
7.3	Correlative Microscopy of Chemically Fixed, Immunolabeled Ultrathin Cryosections Employing Antibodies Coupled with Fluorescent Gold Conjugates	145
7.4	Special Techniques Used in Sample Preparation for Correlative Microscopy: High-Pressure Freezing, Freeze Fracturing, and Freeze Substitution	151
7.5	Correlative Microscopy of Fixed Tissue Specimens Using Freeze Substitution	153
7.6	Future Trends: Correlative Microscopy and High-Content Cellular Screening	154
7.7	Future Trends: Correlative Microscopy of Fluorescent Images Acquired by Confocal Laser Scanning Microscopy	154
	References	155
8	Fluorescence Resonance Energy Transfer and Applications	157
	<i>Andrew Clayton</i>	
8.1	What is FRET?	157
8.1.1	Theory of FRET	157
8.2	Why FRET Can Be Useful	159
8.3	How FRET Can Be Measured	160
8.3.1	Applications of FRET in Spectroscopy	161
8.3.2	Applications of FRET in Microscopy	164
8.4	Emerging Applications Including Novel FRET Probes	169
8.4.1	Intramolecular FRET	169
8.4.2	Intermolecular FRET	171
8.5	Advanced FRET Methods	171
	References	172

9	Monitoring Molecular Dynamics in Live Cells Using Fluorescence Photobleaching	175
	<i>Nectarios Klonis and Leann Tilley</i>	
9.1	Introduction	175
9.2	Photobleaching Theory	176
9.3	Dynamics of Macromolecules	177
	9.3.1 Macromolecular Mobilities	177
	9.3.2 Fluorescence Recovery After Photobleaching	179
9.4	Photobleaching Measurements with Confocal Microscope	183
9.5	Photobleaching Applications	187
	9.5.1 Macromolecular Organization	187
	9.5.2 Monitoring Movement between Different Compartments	190
	9.5.3 Fluorescence Loss in Photobleaching	191
	9.5.4 Fluorescence Resonance Energy Transfer	192
9.6	Conclusions	194
	References	194
10	Time-Resolved Fluorescence in Microscopy	195
	<i>Trevor A. Smith, Craig N. Lincoln, and Damian K. Bird</i>	
10.1	Introduction	195
10.2	Photophysics and Deactivation of Excited State	195
10.3	Time-Resolved Fluorescence Measurements	197
	10.3.1 Deviations from Ideal Decay Behavior	198
	10.3.2 Time-Resolved Fluorescence Techniques	200
10.4	Time-Resolved Fluorescence in Microscopy	206
	10.4.1 Factors That Influence Choice of TRFM Method	213
10.5	Conclusions	218
	References	218
11	Fluorescence Correlation Spectroscopy	223
	<i>Thomas Dertinger, Iris von der Hocht, Anastasia Loman, Ingo Gregor, and Jörg Enderlein</i>	
11.1	Introduction	223
11.2	Optics of Fluorescence Correlation Spectroscopy	227
11.3	Practical Aspects of FCS Experiments	229
11.4	Quantitative Evaluation of FCS Measurements to Obtain Diffusion Constants and Concentration	230
	11.4.1 One-Focus FCS	230
	11.4.2 Two-Focus FCS	237
11.5	Conclusion	243
	References	243

12	Flow Cytometry	245
	<i>Russell E. Connally, Graham Vesey, and Charlotte Morgan</i>	
12.1	What is Flow Cytometry?	245
12.1.1	History of Flow Cytometry	246
12.1.2	Flow Cytometry Fundamentals	248
12.1.3	Sensitivity of Flow Cytometers	251
12.2	Excitation Sources	252
12.2.1	Laser Excitation	252
12.2.2	Gas Laser Sources	253
12.2.3	Diode Lasers	254
12.2.4	Solid-State Lasers	254
12.3	Signal Detection and Analysis	255
12.3.1	Forward Scatter	255
12.3.2	Side Scatter	255
12.3.3	Fluorescence	256
12.3.4	Issues in Flow Cytometry Using Fluorescence: Fluorescence Compensation	256
12.3.5	Multiparameter Analysis	258
12.4	Cell Sorting	258
12.5	Applications of Flow Cytometry	260
12.5.1	Calibration	260
12.5.2	Use of Beads for Diagnostic Purposes	261
12.5.3	Water Testing	262
12.5.4	Milk Analysis	262
12.5.5	Brewing and Wine Production	263
12.5.6	Food Microbiology	264
12.5.7	Quality Control in Microbiological Testing in Various Industries	264
12.5.8	Cytometry: Where to Now?	265
