There and Back Again: A Structural Atlas of RNAP <i>Seth Darst</i>	1
--	---

Part I From Promoter Recognition to Promoter Escape

Chapter 1 Where it all Begins: An Overview of Promoter Recognition and Open Complex Formation <i>Stephen Busby, Annie Kolb and Henri Buc</i>	
--	--

1.1 Gene Expression as a Driver of Life	13
1.2 <i>Escherichia coli</i> RNA Polymerase	14
1.3 Promoters and Core Promoter Elements	17
1.4 Biochemistry: It Works with RNA Polymerase!	19
1.5 Biochemistry of Promoter Regulation	22
1.6 A Word about the Intracellular Environment	26
1.7 Coupling Transcription to Changes in a Complex Environment	27
1.8 A Global View of the RNA Polymerase Economy	30
1.9 The Real World, Emergency Procedures and RNA Polymerase	32
1.10 This is just the Beginning!	33
References	34

Chapter 2 Opening the DNA at the Promoter; The Energetic Challenge

Bianca Selavi

2.1	Introduction	38
2.2	Structural Characterization	42
2.2.1	Crystal Structure of the Holoenzyme	42
2.2.2	Crystal Structure of the Holoenzyme with Fork-junction DNA	43
2.2.3	Structural Model of the Open Complex	45
2.3	Physical Characterization and Structure of the Intermediates	47
2.4	Finding the Promoter. Induced fit and Indirect Sequence Recognition	48
2.5	Formation of the Closed Complex	49
2.5.1	On a Unique Structure of the Closed Complex	49
2.5.2	Role of Upstream Contacts for the Stability of the Closed Complex and in Leading the Complex Towards Subsequent Isomerization	50
2.6	The First Isomerization Step. The role of Sigma, Formation of Specific Interactions	51
2.6.1	Upstream Contacts	51
2.6.2	Nucleation of the Single Stranded Region and its Propagation	52
2.6.3	Phasing of -10 and -35 Regions, the Role of the Spacer	54
2.6.4	Probing Possible Sequential Linear Pathways by the use of Temperature	54
2.6.5	Specific Protein Domains Destabilize the Intermediates in the Pathway	57
2.6.6	Overstabilization is sometimes used as a Regulatory Mechanism	59
2.7	Formation of Transcriptionally Active Open Complex and the Rate-limiting Step: Protein Conformational Changes or DNA Melting?	60
2.8	A Rugged Energy Landscape	61
2.9	Summary and Conclusions	62
	Acknowledgements	63
	References	63

Chapter 3 Intrinsic *In vivo* Modulators: Negative Supercoiling and the Constituents of the Bacterial Nucleoid

Georgi Muskhelishvili and Andrew Travers

3.1	Introduction	69
3.2	DNA Superhelicity – Structures and Implications	69

Contents

3.3	Structure of the Bacterial Nucleoid	72
3.4	Supercoiling Utilization	75
3.5	Promoter Structure and DNA Supercoiling	78
3.6	Role of RNA Polymerase Composition	80
3.6.1	Exchange of σ Factors	81
3.6.2	Auxiliary Subunits	82
3.6.3	Role of ppGpp	82
3.7	Model and Implications	82
3.8	Causality	85
3.9	Cooperation with Nucleoid Associated Proteins	86
3.10	Conversion of Supercoil Energy into Genomic Transcript Patterns	87
3.11	Conclusions	88
	References	88

Chapter 4 Transcription by RNA Polymerases: From Initiation to Elongation, Translocation and Strand Separation

Thomas A Steitz

4.1	Introduction	96
4.2	Transition from the Initiation to the Elongation Phase	98
4.2.1	T7 RNA Polymerase	98
4.2.2	Multi-subunit RNA Polymerases	103
4.3	Translocation and Strand Separation	103
4.3.1	T7 RNA Polymerase	103
4.3.2	Multi-subunit Cellular RNAPs	108
4.4	Additional Similarities between Single and Multi-subunit Polymerases	112
	Acknowledgements	113
	References	113

Chapter 5 Single-molecule FRET Analysis of the Path from Transcription Initiation to Elongation

Achillefs N. Kapanidis and Shimon Weiss

5.1	Introduction	115
5.2	Methodology: FRET and ALEX Spectroscopy	117
5.3	Transcription Mechanisms Addressed using Single- molecule FRET and ALEX	124
5.4	Fate of Initiation Factor σ^{70} in Elongation	126
5.5	Mechanism of Initial Transcription	133

5.6	Kinetic Analysis of Initial Transcription and Promoter Escape	141
5.7	Comparison of FRET Approaches with Magnetic-trap Approaches	142
5.8	Future Prospects	145
5.9	Summary	147
	Acknowledgements	148
	References	148

Chapter 6 Real-time Detection of DNA Unwinding by *Escherichia coli* RNAP: From Transcription Initiation to Termination

Terence R. Strick and Andrey Revyakin

6.1	Introduction	157
6.2	Twist Deformations at the Promoter	158
6.3	Magnetic Trapping and Supercoiling of a Single DNA Molecule	159
6.3.1	General Features of the Magnetic Trap	159
6.3.2	Calibrating the DNA Sensor	161
6.4	Characterization of RPo at two Canonical Promoters	166
6.4.1	Structural Characterization of RPo	167
6.4.2	Kinetic Analysis of RPo	168
6.4.3	Effect of Environmental Variables on Kinetics of RPo	171
6.5	Promoter Escape by DNA Scrunching	172
6.5.1	Characterization of DNA Scrunching during Abortive Initiation	173
6.5.2	Characterization of DNA Scrunching during Promoter Escape	176
6.6	Future Directions	182
	References	183

Part II Transcription Elongation and Termination

Interlude

The Engine and the Brake

Henri Buc and Terence Strick

I.1	Introduction	191
I.2	The Engine	193
I.2.1	Mechano-chemical Coupling at the Catalytic Site	194
I.2.2	Coupling between Translocation and Topology	200
I.3	The Brake	201

I.4 Conclusions	202
References	204

Chapter 7 Substrate Loading, Nucleotide Addition, and Translocation by RNA Polymerase

Jinwei Zhang and Robert Landick

7.1 Basic Mechanisms of Transcript Elongation by RNA Polymerase	206
7.1.1 Active-site Features of an Elongation Complex	207
7.1.2 The Nucleotide Addition Cycle	207
7.1.3 Pyrophosphorolysis and Transcript Cleavage	208
7.1.4 Regulation of Transcript Elongation by Pauses	211
7.2 Structural Basis of NTP Loading and Nucleotide Addition	212
7.2.1 Bridge-helix-centric Models of Nucleotide Addition and Translocation	213
7.2.2 Central Role of the Trigger Loop in Nucleotide Addition and Pausing	216
7.2.3 A Trigger-loop Centric Mechanism for Substrate Loading and Catalysis	217
7.3 Models of Translocation: Power-stroke <i>versus</i> Brownian Ratchet	219
7.3.1 Key Distinctions between Power-stroke and Brownian Ratchet Models	220
7.3.2 Power-stroke Models	221
7.3.3 Brownian Ratchet Models	221
7.3.4 Technical Outlook in Detecting the Precise Translocation Register	222
7.4 Kinetic Models of Nucleotide Addition	223
7.4.1 Allosteric NTP Binding Model	223
7.4.2 NTP-driven Translocation Model	226
7.4.3 Two-pawl Ratchet Model	226
7.4.4 Biophysical Models for Transcript Elongation	227
7.5 Technological Advances in Studies of Transcript Elongation	228
7.6 Concluding Remarks	228
References	229

Chapter 8 Regulation of RNA Polymerase through its Active Center

Sergei Nechaev, Nikolay Zenkin and Konstantin Severinov

8.1 Introduction	236
8.2 Regulatory Checkpoints of the RNAP Active Center	237

8.2.1	Versatility of the Active Center. How many Metals are Enough?	237
8.2.2	Delivery of NTPs to the Active Center. How many Channels are Enough?	238
8.2.3	Nucleotide Selection. How many Steps are Enough?	241
8.3	Regulators that Target the RNAP Active Center	244
8.3.1	Small-molecule Effectors of RNAP	244
8.3.2	Regulation of RNAP by Proteins that Bind in the Secondary Channel	250
8.4	Transcript Proofreading	254
8.4.1	Transcriptional Proofreading through Pyrophosphorolysis	255
8.4.2	Proofreading by Transcript Cleavage Factors	256
8.4.3	Transcript-assisted Proofreading. A New Class of Ribozymes?	257
8.5	Conclusions	258
	Acknowledgements	259
	References	259

Chapter 9 Kinetic Modeling of Transcription Elongation

Lu Bai, Alla Shundrovsky and Michelle D. Wang

9.1	Introduction	263
9.2	Background	265
9.3	Mechano-chemical Coupling of Transcription	266
9.3.1	NTP Incorporation Cycle	266
9.3.2	NTP Incorporation Pathway in a Simple Brownian Ratchet Model	266
9.3.3	NTP Incorporation Pathways in more Elaborate Brownian Ratchet Models	267
9.3.4	NTP Incorporation Pathway in a Power-stroke Model	269
9.3.5	Elongation Kinetics	270
9.3.6	Force-dependent Elongation Kinetics	271
9.4	Sequence-dependent RNAP Kinetics	274
9.4.1	Thermodynamic Analysis of the TEC	274
9.4.2	Sequence-dependent NTP Incorporation Kinetics in Brownian Ratchet Models	275
9.4.3	Model Predictions of Pause Locations, Kinetics and Mechanisms	277
	Acknowledgements	278
	References	278

Contents

Chapter 10 Mechanics of Transcription Termination

Evgeny Nudler

10.1	Introduction	281
10.2	Structure/Function Overview of the Elongation Complex (EC)	282
10.3	Mechanism of Intrinsic Termination	283
10.3.1	The Pausing Phase	285
10.3.2	The Termination Phase	287
10.4	Mechanism of Rho Termination	294
10.5	Summary	295
10.6	Concluding Remarks	296
	References	296

Conclusion

Past, Present, and Future of Single-molecule Studies of Transcription

Carlos Bustamante and Jeffrey R. Moffitt

C.1	Introduction	302
C.2	RNA Polymerase as a Molecular Machine: Past and Present	303
C.3	Technical Developments in Optical Tweezers	307
C.4	A Look into the Future	309
