Preface	v
Contributors	vii
1 Aalen's Additive Risk Model	1
1.1 The Model	1
1.2 Model Fitting	2
1.3 Model Diagnostics	5
1.4 Related Models	5
1.5 Conclusion	5
2 Aggregation	9
2.1 Introduction	9
2.2 Aggregation as an Observable Phenomenon	9
2.3 Aggregation as a Statistical Method	10
2.4 A Perspective	12
3 AIDS Stochastic Models	15
3.1 Introduction	15
3.2 Stochastic Transmission Models of the HIV Epidemic in Populations .	15
3.3 The Transmission Step: The Probability of HIV Transmission	17
3.4 The Progression Step: The Progression of HIV in HIV-Infected Individ-	
uals	17
3.5 Stochastic Modeling of HIV Transmission by Statistical Approach . .	18
3.6 The Stochastic Difference Equations and the Chain Multinomial Model	19
3.7 The Probability Distribution of the State Variables	21
3.8 The Staged Model of HIV Epidemic in Homosexual Populations	22
3.9 Stochastic Models of HIV Transmission in Complex Situations	23
3.10 State Space Models of the HIV Epidemic	25
3.11 A State Space Model for the HIV Epidemic in the San Francisco Homo-	
sexual Population	26
3.12 The Stochastic System Model	26
3.13 The Observation Model	27

3.14	A General Bayesian Procedure for Estimating the Unknown Parameters and the State Variables	28
4	All-or-None Compliance	37
4.1	Introduction	37
4.2	Examples	37
4.3	Randomized Consent Design	38
4.4	The Paired Availability Design	39
4.5	Estimating Efficacy	39
5	Ascertainment Sampling	43
6	Assessment Bias	47
6.1	Lack of Blinding	47
6.2	Harmless or False-Positive Cases of Disease	48
6.3	Disease-Specific Mortality	48
6.4	Composite Outcomes	49
6.5	Competing Risks	49
6.6	Timing of Outcomes	49
6.7	Assessment of Harms	49
7	Bioavailability and Bioequivalence	53
7.1	Definition	53
7.2	History of Bioavailability	53
7.3	Bioequivalence Measures	54
7.4	Decision Rules	54
7.5	Designs of Bioavailability Studies	55
7.6	Statistical Methods for Average Bioavailability	55
7.7	Sample Size Determination	57
7.8	Current Issues	57
8	Cancer Stochastic Models	61
8.1	Introduction	61
8.2	A Brief History of Stochastic Modeling of Carcinogenesis	62
8.3	Single-Pathway Models of Carcinogenesis	64
8.4	Multiple-Pathways Models of Carcinogenesis	66
8.5	The Mixed Models of Carcinogenesis	67
8.6	Mathematical Analysis of Stochastic Models of Carcinogenesis by Markov Theories	68
8.7	Mathematical Analysis of Stochastic Models of Carcinogenesis by Stochastic Differential Equations	71
9	Centralized Genomic Control: A Simple Approach Correcting for Population Structures in Case-Control Association Studies	81
9.1	Introduction	81
9.2	Methods	82
9.3	Simulation Studies	84
9.4	Simulation Results	88

9.5	Applications	90
9.6	Discussion	91
10	Change Point Methods in Genetics	95
10.1	Introduction	95
10.2	A Brief Literature Review on Analysis of aCGH Data	97
10.3	A Brief Literature Review on Statistical Change Point Analysis	100
10.4	Statistical Change Point Methods Useful for aCGH Data Analysis . .	102
10.5	Concluding Remarks	111
11	Classical Biostatistics	117
11.1	Introduction	117
11.2	Fields of Application or Areas of Concern	118
11.3	Future Trends	123
11.4	Education and Employment of Biostatisticians	127
12	Clinical Trials II	131
12.1	Introduction	131
12.2	Types of Clinical Trials	131
12.3	Selection of Patients and Treatments	132
12.4	Endpoints	133
12.5	Randomization and Stratification	134
12.6	Sample Size	135
12.7	Large, Simple Trials	136
12.8	Monitoring of Interim Results	136
12.9	Subset Analysis	137
12.10	Meta-Analysis	138
13	Cluster Randomization	143
13.1	Introduction	143
13.2	Examples of Cluster Randomization Trails	144
13.3	Principles of Experimental Design	145
13.4	Experimental and Quasi-Experimental Designs	146
13.5	The Effect of Failing to Replicate	147
13.6	Sample Size Estimation	148
13.7	Cluster-Level Analyses	149
13.8	Individual-Level Analysis	150
13.9	Incorporating Repeated Assessments	152
13.10	Study Reporting	153
13.11	Meta-Analysis	154
14	Cohort Analysis	157
14.1	Definition	157
14.2	Methodology	157
14.3	Applications	161

15 Comparisons with a Control	167
15.1 Introduction	167
15.2 Some Examples	168
15.3 Simultaneous Confidence Intervals	168
15.4 Multiple Hypothesis Tests	169
15.5 Other Results	173
15.6 Other Approaches	174
16 Competing Risks	179
16.1 Observables	179
16.2 Beyond Observables	180
16.3 Estimation Assuming Independent $T_1, T_2, \dots, T_M$	182
16.4 Estimation Assuming Dependent $T_1, T_2, \dots, T_m$	184
16.5 Absolute Risks	184
16.6 Markov Model and Extensions	185
17 Countermatched Sampling	189
18 Counting Processes	193
18.1 Introduction	193
18.2 Multivariate Counting Processes and Martingales	193
18.3 Censoring	194
18.4 Multiplicative Intensity Models	194
18.5 Survival Analysis: The Kaplan-Meier Estimator	197
18.6 Transitions in Nonhomogeneous Markov Processes	198
18.7 Nonparametric Hypothesis Tests	198
18.8 Regression Models and Random Heterogeneity	199
19 Cox's <i>Proportional Hazards Model</i>	203
19.1 The Model	203
19.2 The Stratified Model	204
19.3 Partial Likelihood	204
19.4 Tied Data	205
19.5 Parameter Estimation and Confidence Intervals	207
19.6 Hypothesis Testing	207
19.7 Estimating the Underlying Hazard Function	208
19.8 Time-Dependent Covariates	209
19.9 Model Checking	211
19.10 Concluding Remarks	212
20 Crossover Trials	215
20.1 Introduction	215
20.2 2×2 Crossover Trial	217
20.3 Higher-Order Designs for Two Treatments	217
20.4 Designs for Three or More Treatments	217
20.5 Analysis of Continuous Data	219
20.6 Analysis of Discrete Data	220
20.7 Concluding Remarks	222

21 Design and Analysis for Repeated Measurements	225
21.1 Introduction	225
21.2 Design	226
21.3 Statistical Methods	232
22 DNA Fingerprinting	259
22.1 Introduction	259
22.2 DNA Markers	260
22.3 Summarizing the Evidence	261
22.4 Independence and Population Substructure	262
22.5 The Affinal Model (Same Subpopulation)	263
22.6 The Cognate Model (Same Family)	263
22.7 In Practice	264
23 Epidemics	269
23.1 Introduction	269
23.2 History of Epidemic Models	270
23.3 Infectious Disease Data	271
23.4 The Basic Reproduction Number	272
23.5 Efficacy of Vaccines and Effectiveness of Vaccination Programs	273
23.6 AIDS	274
24 Epidemiological Statistics I	279
24.1 Introduction	279
24.2 Role of the Statistician	280
24.3 Computing	281
24.4 Longitudinal and Cross-Sectional Data and Growth	282
24.5 Small Risks Undergone by Millions of People: Human Radiation Hazards	282
24.6 Human Radiation Hazards and Prospective or Forward-Looking Studies	284
24.7 Epidemiology and Cigarette Smoking	284
24.8 Unsolved Problems on the Effects of Cigarette Smoking	286
24.9 Form of Age Incidence Curves in General	288
24.10 An Example Where Age Must Be Allowed for: Side Effects from Adding Fluoride to Drinking Water	288
24.11 Epidemiology and Heart Diseases	291
24.12 Scope of Epidemiology in the 1980s	293
24.13 Further Reading	295
25 Epidemiological Statistics II	299
25.1 Introduction	299
25.2 Data Roles	299
25.3 Concept Maps	300
25.4 Data Types	301
25.5 Disease Measurement	302
25.6 Measuring Associations	302
25.7 Types of Studies	303
25.8 Clinical Trials	304

25.9	Cohort Studies	305
25.10	Case-Control Studies	305
25.11	Cross-Sectional Studies	305
25.12	Bias	306
25.13	Sampling Variability	307
25.14	Matching	308
25.15	Statistical Significance versus Effect Importance	309
25.16	Basic Statistical Methods	309
25.17	Sample Size Determination	310
25.18	Adjusting for a Stratification Variable	311
25.19	Meta-Analysis	311
25.20	Survival Analysis	312
25.21	Logistic Regression	313
25.22	Poisson Regression	314
25.23	Proportional Hazards Regression	314
25.24	Correlated Outcomes	315
26	Event History Analysis	319
26.1	Introduction	319
26.2	Recurrent Events	320
26.3	Parametric Estimation	320
26.4	Semiparametric Estimation	321
26.5	Multistate Models	321
26.6	Markov and Semi-Markov Models	322
26.7	Frailty Models	323
26.8	Goodness of Fit	324
27	FDA Statistical Programs: An Overview	329
28	FDA Statistical Programs: Human Drugs	335
28.1	Official Statistical Responsibilities	335
28.2	Role of Statistics	336
28.3	Statistical Guidelines	337
28.4	Selected Clinical Statistical Problems	337
28.5	Some Nonclinical Statistical Problems	339
28.6	Applied Statistical Research	339
28.7	Notes	340
29	Follow-Up	343
29.1	Introduction	343
29.2	Concurrent Follow-Up	343
29.3	Historical Follow-Up	345
30	Frailty Models	349

31 Framingham: An Evolving Longitudinal Study	353
31.1 Introduction	353
31.2 Description of the Framingham Population and Sample	354
31.3 Methodological Issues in the Analysis of Disease Processes in Longitudi- nal Population Studies	355
31.4 Adaptive Nature of Longitudinal Studies	356
32 Genetic Linkage	359
33 Group-Sequential Methods in Biomedical Research	365
33.1 Introduction	365
33.2 The Role of Brownian Motion for Large-Sample Statistics	366
33.3 Group-Sequential Testing of a Hypothesis	367
33.4 Terminal Analysis Following a Sequential Test	371
34 Group-Sequential Tests	377
34.1 Introduction	377
34.2 Two-Sided Tests	378
34.3 Unequal and Unpredictable Group Sizes	381
34.4 One-Sided Tests	381
34.5 Inference upon Termination	382
34.6 Repeated Confidence Intervals	382
34.7 Literature	383
35 Grouped Data in Survival Analysis	391
35.1 Introduction	391
35.2 Data Structure	392
35.3 Statistical Methods	393
36 Image Processing	397
36.1 Introduction	397
36.2 Hardware of an Imaging System	398
36.3 Processing of Image Data	399
36.4 Restoration and Noise Removal	402
36.5 Image Enhancement	404
36.6 Segmentation	405
36.7 Feature Extraction	409
36.8 Other Applications	411
37 Image Restoration and Reconstruction	415
37.1 Introduction	415
37.2 Image Restoration	415
37.3 Bayesian Restoration Models	417
37.4 Image Reconstruction	419
37.5 Summary	421

38 Imputation and Multiple Imputation	425
38.1 Introduction	425
38.2 Considerations for Creating Imputations	426
38.3 The Underestimation of Uncertainty with Single Imputation	427
38.4 Introduction to Multiple Imputation	428
38.5 Analyzing a Multiply Imputed Dataset	428
38.6 Reflecting Appropriate Variability and Choosing M	429
38.7 Bayesian Iterative Simulation and Multiple Imputation	431
38.8 More on Conditions for Validity of Inferences with Imputed Data . . .	432
38.9 Some Applications and Different Uses of Multiple Imputation	433
38.10 Other Approaches to Estimating Variability with Imputed Data . . .	435
38.11 Summary and Conclusion	436
39 Incomplete Data	441
39.1 Introduction	441
39.2 Common Incomplete-Data Problems	441
39.3 Methods for Handling Incomplete Data	444
39.4 General Data Patterns: The EM Algorithm	447
40 Interval Censoring	451
40.1 Censoring	451
40.2 Classification and Examples	452
40.3 Study Design and Statistical Modeling	455
40.4 Statistical Analysis	455
40.5 Worked Example	457
41 Interrater Agreement	461
41.1 Introduction	461
41.2 Agreement Measures for Unreplicated Measurements	462
41.3 Agreement Measures for Replicated Measurements	468
41.4 Modeling Measurements and Inference on Agreement Measures	471
41.5 Illustration	473
41.6 Summary and Discussion	475
41.7 Appendix	476
42 Kaplan–Meier Estimator I	481
42.1 Introduction	481
42.2 Censored-Data Problem	481
42.3 Kaplan–Meier Estimator	482
42.4 Appropriateness	485
42.5 Properties, Variance Estimators, Confidence Intervals and Confidence Bands	485
42.6 Nonparametric Quantile Estimation Based on the Kaplan–Meier Esti- mator	486

43 Kaplan–Meier Estimator II	489
43.1 Introduction	489
43.2 The Right-Censoring Model	490
43.3 The Kaplan–Meier Estimator	490
43.4 Model Identifiability	490
43.5 The Inversion Formula	491
43.6 Identifiability	492
43.7 Finite-Sample Properties of the KM Estimator	492
43.8 Consistency, Asymptotic Normality, and the Strong Law	492
43.9 Asymptotic Optimality	493
43.10 Counting Process Formulation and Martingales	494
43.11 Confidence Intervals and Confidence Bands	495
43.12 The Quantile Process of the KM Estimator	495
43.13 Large Deviations	495
43.14 Generalizations	495
44 Landmark Data	501
44.1 Introduction	501
44.2 Shape Description	502
44.3 Mean Shape	503
44.4 Shape Variability	504
44.5 Shape Comparisons and Deformation	505
44.6 Shape Distributions	507
44.7 Conditional Approach: the Complex Bingham Distribution	508
44.8 Shapes in Higher Dimensions	508
44.9 Distance-Based Method	509
44.10 Shapes in Image Analysis	509
44.11 Concluding Remarks	510
45 Longitudinal Data Analysis	515
45.1 Domain of Longitudinal Data Analysis	515
45.2 Some History	515
45.3 Designs and Their Implications for Analysis	517
45.4 Analytical Strategies—Examples	518
45.5 Brief Guide to Other Literature	526
46 Meta-Analysis	531
47 Missing Data: Sensitivity Analysis	535
47.1 Introduction	535
47.2 Sensitivity Analysis for Contingency Tables	536
47.3 Selection Models and Local Influence	538
47.4 Pattern-Mixture Modeling Approach	539

48 Multiple Testing in Clinical Trials	547
48.1 Introduction	547
48.2 Concepts of Error Rates	548
48.3 Union–Intersection Testing	549
48.4 Closed Testing	550
48.5 Partition Testing	552
49 Mutation Processes	555
50 Nested Case-Control Sampling	559
50.1 Introduction	559
50.2 Nested Case–Control Studies and Other Case–Control Designs	560
50.3 An Example	560
50.4 Model and Data	561
50.5 Estimation	562
50.6 Relative Efficiency	563
50.7 Extensions	564
51 Observational Studies	567
51.1 Introduction	567
51.2 Prospective	568
51.3 Retrospective	569
51.4 Control of Variation	569
51.5 Role of Observational Studies	570
52 One- and Two-Armed Bandit Problems	573
52.1 Introduction	573
52.2 Finite-Horizon Bernoulli Bandits	573
52.3 Geometric Discounting	575
52.4 One-Armed Bandits	576
52.5 Continuous Time	576
52.6 Other Objectives	577
53 Ophthalmology	579
53.1 Introduction	579
53.2 Clinical Trials	579
53.3 Observational Studies	580
54 Panel Count Data	585
54.1 Introduction	585
54.2 Nonparametric Estimation	587
54.3 Nonparametric Comparison	591
54.4 Regression Analysis	594
54.5 Regression Analysis with Dependent Observation Process	598
54.6 Discussion and Other Topics	600

55 Planning and Analysis of Group-Randomized Trials	605
55.1 Introduction	605
55.2 The Research Question	605
55.3 The Research Team	606
55.4 The Research Design	606
55.5 Potential Design Problems and Methods for Avoiding Them	607
55.6 Potential Analytic Problems and Methods for Avoiding Them	608
55.7 Variables of Interest and Their Measures	608
55.8 The Intervention	609
55.9 Power	611
55.10 Summary	611
56 Predicting Preclinical Disease Using the Mixed-Effects Regression Model	613
56.1 Introduction	613
56.2 Single-Variable Prediction Model	617
56.3 Predicting Alzheimer's Disease	618
56.4 Predicting Prostate Cancer	621
56.5 Multivariate Prediction Model	623
56.6 Predicting Coronary Heart Disease	625
56.7 Discussion	628
57 Predicting Random Effects in Group-Randomized Trials	635
57.1 Introduction	635
57.2 Background	635
57.3 Methods	636
57.4 Modeling Response for a Subject	637
57.5 Random Assignment of Treatment and Sampling	638
57.6 Intuitive Predictors of the Latent Value of a Realized Group	639
57.7 Models and Approaches	640
57.8 Henderson's Mixed-Model Equations	640
57.9 Bayesian Estimation	641
57.10 Superpopulation Model Predictors	641
57.11 Random Permutation Model Predictors	642
57.12 Practice and Extensions	643
57.13 Discussion and Conclusions	644
58 Probabilistic and Statistical Models for Conception	647
58.1 Introduction	647
58.2 Biological Background	648
58.3 Population Models	649
58.4 Fecundability and Time to Pregnancy	654
58.5 Day-Specific Probabilities of Conception	658
58.6 Data	662
58.7 Models for Markers	663
58.8 Discussion	663

59 Probit Analysis	669
59.1 Introduction	669
59.2 Applications	669
59.3 Framework for Quantal Response Models	670
59.4 Relation between Quantitative and Quantal Responses	670
59.5 The Tolerance Distribution: Probits and Logits	671
59.6 Multivariate Tolerance Distributions	672
59.7 Ordered Response Variables: Rankits	672
59.8 Mixed Discrete–Continuous Response Variables: Tobits	673
59.9 The Effects Function	673
59.10 Estimation and Hypothesis Testing	674
60 Prospective Studies	677
60.1 Introduction	677
60.2 The Selection of Subjects	678
60.3 The Measurement of Effect	679
60.4 Relative Merits of Prospective Studies	680
61 Quality Assessment for Clinical Trials	683
62 Repeated Measurements	695
62.1 Introduction and Case Study	695
62.2 Linear Models for Gaussian Data	697
62.3 Models for Discrete Outcomes	700
62.4 Design Considerations	704
62.5 Concluding Remarks	705
63 Reproduction Rates	709
64 Retrospective Studies	713
64.1 Introduction	713
64.2 Types of Retrospective Studies	713
64.3 The Frequency of Study Factors and Retrospective Research	715
64.4 Other Considerations in Retrospective Research	716
65 Sample Size Determination for Clinical Trials	719
65.1 Introduction	719
65.2 Sample Size for One-Sample Problem	720
65.3 Sample Size for Two-Sample Problem	721
65.4 Sample Size for Multiple-Sample Problem	723
65.5 Sample Size for Multiple-Arm Dose–Response Trial Problem	725
65.6 Sample Size for Multiple Regression Analysis	727
65.7 Sample Size for Multiple Logistic Regression Analysis	728
65.8 Discussion	729

66 Scan Statistics	733
66.1 Introduction	733
66.2 History and Literature	734
66.3 Higher-Dimensional Scans	736
66.4 Scan Statistics with Nonuniform Background	736
66.5 Scan Statistics with Variable-Size Windows	737
66.6 The Conditional Probability P	738
66.7 The Unconditional Probability P^*	738
66.8 Sequence of Trials: Bernoulli Model	738
66.9 Integer-Valued Random Variables	739
66.10 The Circle	739
66.11 Two-Dimensional Scan Statistics	740
66.12 Multiple-Scan Statistics	741
66.13 Spatial Scan Statistics	741
66.14 Bioinformatics and Genetic Epidemiology	742
66.15 Process Control and Monitoring	742
66.16 Bayesian Scan Statistics	742
66.17 Theoretical Methods	743
67 Semiparametric Analysis of Competing-Risk Data	749
67.1 Introduction and Notation	749
67.2 Semiparametric Models	751
67.3 Statistical Inference under the Additive Risks Model	756
67.4 A Comprehensive Analysis of Malignant Melanoma Data	758
67.5 Discussion	765
68 Size and Shape Analysis	769
68.1 Introduction	769
68.2 Shape Vectors and Size Variables	770
68.3 Size Variables Represent A Broad Class	770
68.4 Regular Sequences of Size Variables	771
68.5 Size Ratios of Regular Sequence Represent Shape	771
68.6 Independence of Shape and Size; Isometry and Neutrality	771
68.7 Isometry and Neutrality Characterize Distributions	772
68.8 Diversity of Hypotheses for Isometry (Neutrality)	773
68.9 Practical Considerations	775
68.10 The Choice of a Size Variable	775
68.11 Relationships to Other Concepts of Size and Shape	777
69 Stability Study Designs	781
69.1 Introduction	781
69.2 Stability Study Designs	782
69.3 Criteria for Design Comparison	788
69.4 Stability Protocol	791
69.5 Basic Design Considerations	791
69.6 Conclusions	793

70 Statistical Analysis of DNA Microarray Data	795
70.1 Introduction	795
70.2 cDNA versus Oligonucleotide Chips	795
70.3 Preprocessing of Data	796
70.4 Statistical Clustering	796
70.5 Detection of Differentially Expressed Genes	797
70.6 Regression Techniques	797
70.7 Bootstrap	797
71 Statistical Genetics	801
72 Statistical Methods in Bioassay	807
72.1 Introduction	807
72.2 Estimation of Relative Potency from Quantitative Responses	808
72.3 Quantal Response Models	809
72.4 Estimation of Quantal Response Curves	810
72.5 Estimation of Relative Potency from Quantal Responses	812
72.6 Design of the Experiment	812
72.7 Related Areas	813
73 Statistical Modeling of Human Fecundity	815
73.1 Introduction	815
73.2 Statistical Models	817
73.3 Analysis of a Prospective Pregnancy Study: New York Angler Cohort Study	824
73.4 Biological Issues around Fecundity	829
73.5 Further Extensions	833
74 Statistical Quality of Life	839
74.1 Introduction	839
74.2 Measurement Models of Health-Related Quality of Life	840
74.3 Validation of Health-Related Quality-of-Life Measurement Models	847
74.4 Analysis of Quality of Life Variation between Groups	853
74.5 Conclusion	859
75 Statistics at CDC	865
75.1 Introduction	865
75.2 Public Health Data and Statistics at CDC/ATSDR	866
75.3 Statistics and Research at CDC/ATSDR	866
75.4 The CDC/ATSDR Statistical Advisory Group	868
75.5 Future Directions for Statistics at CDC/ATSDR	868
76 Statistics in Dentistry	871
77 Statistics in Evolutionary Genetics	873

78 Statistics in Forensic Science	879
78.1 Introduction	879
78.2 History	879
78.3 Evaluation of Evidence	881
78.4 Continuous Measurements	882
78.5 Future	885
79 Statistics in Human Genetics I	887
79.1 Introduction	887
79.2 Applications	887
79.3 Genetic Mechanisms	889
79.4 Literature	891
80 Statistics in Human Genetics II	893
80.1 Introduction	893
80.2 Genomics	893
80.3 Genetic Analysis of Traits	894
80.4 Additional Topics	901
80.5 Literature	902
81 Statistics in Medical Diagnosis	909
81.1 Introduction	909
81.2 The Diagnosis Problem	909
81.3 Relevant Statistical Methods	910
81.4 Application and Acceptance in Practice	913
82 Statistics in Medicine	915
82.1 Introduction	915
82.2 Key Features	916
82.3 More Recent History	917
82.4 Observational Plans	917
82.5 Clinical Trials	917
82.6 Stochastic Processes	920
82.7 Meta-Analysis	920
82.8 Bayesian Medical Statistics	920
82.9 Current Research Interests	921
82.10 The Practice of Statistics in Medicine	921
83 Statistics in the Pharmaceutical Industry	927
83.1 Introduction	927
83.2 The Clinical Response to Treatment	927
83.3 Quantal Responses	929
83.4 Drug Interactions	929
83.5 Biological Standardization (Bioassay)	930
83.6 Stability of Products	930
83.7 Quality Control	931
83.8 Experiment Design	931
83.9 Nonparametric Methods	931

84 Statistics in Spatial Epidemiology	933
84.1 Introduction	933
84.2 Basic Definitions and Models	934
84.3 Special Application Areas	937
85 Stochastic Compartment Models	939
85.1 Introduction	939
85.2 Origin of Compartment Models in the Biological Sciences	939
85.3 Linear Compartment Systems	940
85.4 Estimation and Identification of Stochastic Compartment Model Param- eters	941
85.5 Model Building in Statistical Analysis	943
86 Surrogate Markers	945
86.1 Introduction	945
86.2 Data from a Single Unit	946
87 Survival Analysis	953
87.1 Survival Data	953
87.2 Nonparametric Survival Models	954
87.3 Parametric Survival Models	956
87.4 Regression Models	957
87.5 Some Extensions	960
87.6 An Example	962
Index	967
