Full Contents

Chapter 1

PROPERTIES OF HYDROCARBON MIXTURES

- 1.1 Compressibility Factor and Phase Behavior 1
 - 1.1.1 Compressibility Factor Using the Principle of Corresponding States (CSP) 9
 - 1.1.2 Direct Calculation of Z Factors 11
 - 1.1.3 Classification of Hydrocarbon Fluids 14
 - 1.1.4 Reservoir Conditions Phase Behavior 17
- 1.2 Sampling Process and Laboratory Measurements 23
 - 1.2.1 Equilibrium Cell Determinations 27
 - 1.2.2 Equilibrium Flash Calculations 29
 - 1.2.3 Vapor-Liquid Equilibrium Calculations 39
 - 1.2.4 Predicting the Properties of Hexane Plus (C_{6+}) Fractions 52
- 1.3 Vapor-Liquid Equilibrium by Equation of State 61
 - References 70

Chapter 2

FLOW OF FLUIDS

- 2.1 Basic Parameters of Multiphase Flow [1] 80
 - 2.1.1 Flow Regimes 80
- 2.2 Slightly Inclined Pipes ($-10^\circ < \theta < 15^\circ$) 84
 - 2.2.1 Step 1. Dimensionless Parameters 84
 - 2.2.2 Step 2. Flow Regime Map 84
 - 2.2.3 Step 3. Flow Regime Selection 89
- 2.3 Risers and Wells ($\theta = 90^\circ$) 89
 - 2.3.1 Step 1. Dimensionless Parameters 89
 - 2.3.2 Step 2. Flow Regime Map 90
 - 2.3.3 Step 3. Flow Regime Selection 90
- 2.4 Downcomers ($\theta = -90^\circ$) 91
 - 2.4.1 Annular-Slug Transition 92
 - 2.4.2 Slug-Bubbly Transition 92
- 2.5 Stratified Flow Regime 94

2.5.1	Pressure Gradient	97
2.5.2	Special Cases for Low and High Liquid Holdup	105
2.6	Annular Flow Regime	106
2.6.1	Liquid Entrainment E_d	106
2.6.2	Liquid Holdup H_L	107
2.6.3	Pressure Gradient	109
2.6.4	Special Case for Low Liquid Holdup	111
2.7	Slug Flow Regime	112
2.7.1	Slug Velocity	112
2.7.2	Liquid Holdup	112
2.7.3	Pressure Gradient	113
2.7.4	Optional Correction	114
2.8	Bubbly Flow Regime	115
2.8.1	Pressure Gradient	116
2.9	Correction for Acceleration Effects	116
2.10	Limitation	117
2.11	Empirical Methods	121
2.12	The Duns-Ros Method [20, 21]	121
2.13	The Orkiszewski Method [8, 9]	136
2.13.1	Bubble Flow	138
2.13.2	Slug Flow	139
2.13.3	Transition Flow	141
2.13.4	Mist-Flow	141
2.14	The Hagedorn-Brown Method [9, 12, 13]	146
2.15	The Beggs-Brill Method [2, 9, 15]	155
2.16	Mechanistic Models	166
2.17	Hasan and Kabir Model [18, 19]	167
2.18	Summary	170
	References	171

Chapter 3

NATURAL FLOW PERFORMANCE

3.1	Inflow Performance	174
3.1.1	Predicting Future Oil Well IPR	176
3.1.2	Tubing Performance	177
3.1.3	Choke Performance	177
3.1.4	Flowline Performance	180
3.1.5	Gas Flow Performances	184
3.1.6	Gas Inflow Performance	184
3.1.7	Low-Permeability Well Tests	188
3.1.8	Predicting Future IPR	189

3.1.9	Tubing Performance	191
3.1.10	Choke Performance	194
3.1.11	Flowline Performance	197
3.2	Two-Phase Flow Performance	201
3.2.1	Two-Phase Inflow Performance	201
3.2.2	Vogel's Method	202
3.2.3	Fetkovich Method	204
3.2.4	Modified Standing's Method	205
3.2.5	Predicting Future IPR	206
3.2.6	Tubing Performance	208
3.2.7	Use of Vertical Pressure Gradients	210
3.2.8	Water Content	210
3.2.9	Wellhead Pressure	216
3.2.10	Predicting the Flowing Life	216
3.2.11	Choke Performance	218
3.2.12	Gilbert's Correlation	219
3.2.13	Poetmann-Beck's Correlation	220
3.2.14	Ashford's Correlations	223
3.2.15	Flowline Performance	224
	References	231

Chapter 4

GAS PRODUCTION ENGINEERING

4.1	Surface Production/Separation Facility	233
4.1.1	Nomenclature of Separating Pressure Vessels	235
4.2	Pressure Vessel Relief Systems	238
4.2.1	Product Storage	238
4.2.2	Prime Movers	241
4.2.3	Piping Guidelines	243
4.2.4	Pressure Vessel Design—Phase Separation [11, 14–16]	248
4.3	Separator Design and Construction	251
4.4	Vertical Separators	254
4.5	Horizontal Separator	259
4.6	Vessel Internals [18]	263
4.7	Oil–Water–Gas Separation	266
4.8	Two-Stage Separation Systems	275

FULL CONTENTS

4.9	Crude Oil Treating Systems	278
4.9.1	Treating Equipment	279
4.9.2	Heat Input Requirements [21, 22]	285
	References	298

	Index	301
