<b>Preface</b>	<b>xi</b>
<b>Symbols</b>	<b>xiii</b>
<b>Part One Advanced Analysis of Steel Frames</b>	<b>1</b>
<b>Chapter 1 Introduction</b>	<b>3</b>
1.1 Type of Steel Frames	3
1.2 Type of Components for Steel Frames	3
1.3 Type of Beam–Column Connections	7
1.4 Deformation of Joint Panel	7
1.5 Analysis Tasks and Method for Steel Frame Design	8
1.6 Definition of Elements in Steel Frames	9
<b>Chapter 2 Elastic Stiffness Equation of Prismatic Beam Element</b>	<b>11</b>
2.1 General Form of Equation	11
2.1.1 Beam Element in Tension	11
2.1.2 Beam Element in Compression	16
2.1.3 Series Expansion of Stiffness Equations	16
2.1.4 <i>Beam Element with Initial Geometric Imperfection</i>	17
2.2 Special Forms of Elemental Equations	19
2.2.1 Neglecting Effect of Shear Deformation	19
2.2.2 Neglecting Effect of Axial Force	21
2.2.3 Neglecting Effects of Shear Deformation and Axial Force	22
2.3 Examples	22
2.3.1 Bent Frame	22
2.3.2 Simply Supported Beam	24
<b>Chapter 3 Elastic Stiffness Equation of Tapered Beam Element</b>	<b>25</b>
3.1 Tapered Beam Element	25
3.1.1 Differential Equilibrium Equation	25
3.1.2 Stiffness Equation	27
3.2 Numerical Verification	29
3.2.1 <i>Symmetry of Stiffness Matrix</i>	29
3.2.2 Static Deflection	30
3.2.3 Elastic Critical Load	30
3.2.4 Frequency of Free Vibration	30

vi CONTENTS

3.2.5	Effect of Term Number Truncated in Polynomial Series	31
3.2.6	Steel Portal Frame	31
3.3	Appendix	33
3.3.1	Chebyshev Polynomial Approach (Rice, 1992)	33
3.3.2	Expression of Elements in Equation (3.23)	34
<b>Chapter 4</b>	<b>Elastic Stiffness Equation of Composite Beam Element</b>	<b>35</b>
4.1	Characteristics and Classification of Composite Beam	35
4.2	Effects of Composite Action on Elastic Stiffness of Composite Beam	37
4.2.1	Beam without Composite Action	37
4.2.2	Beam with Full Composite Action	38
4.2.3	Beam with Partial Composite Action	39
4.3	Elastic Stiffness Equation of Steel–Concrete Composite Beam Element	40
4.3.1	Basic Assumptions	40
4.3.2	Differential Equilibrium Equation of Partially Composite Beam	41
4.3.3	Stiffness Equation of Composite Beam Element	42
4.3.4	Equivalent Nodal Load Vector	46
4.4	Example	49
4.5	Problems in Present Work	51
<b>Chapter 5</b>	<b>Sectional Yielding and Hysteretic Model of Steel Beam Columns</b>	<b>53</b>
5.1	Yielding of Beam Section Subjected to Uniaxial Bending	53
5.2	Yielding of Column Section Subjected to Uniaxial Bending	53
5.3	Yielding of Column Section Subjected to Biaxial Bending	56
5.3.1	Equation of Initial Yielding Surface	56
5.3.2	Equation of Ultimate Yielding Surface	56
5.3.3	Approximate Expression of Ultimate Yielding Surface	61
5.3.4	Effects of Torsion Moment	62
5.4	Hysteretic Model	64
5.4.1	Cyclic Loading and Hysteretic Behaviour	64
5.4.2	Hysteretic Model of Beam Section	65
5.4.3	Hysteretic Model of Column Section Subjected to Uniaxial Bending	67
5.4.4	Hysteretic Model of Column Section Subjected to Biaxial Bending	67
5.5	Determination of Loading and Deformation States of Beam–Column Sections	68
<b>Chapter 6</b>	<b>Hysteretic Behaviour of Composite Beams</b>	<b>71</b>
6.1	Hysteretic Model of Steel and Concrete Material Under Cyclic Loading	71
6.1.1	Hysteretic Model of Steel Stress–Strain Relationship	71
6.1.2	Hysteretic Model of Concrete Stress–Strain Relationship	71
6.2	Numerical Method for Moment–Curvature Hysteretic Curves	75
6.2.1	Assumptions	75
6.2.2	Sectional Division	75
6.2.3	Calculation Procedure of Moment–Curvature Relationship	76
6.3	Hysteretic Characteristics of Moment–Curvature Relationships	77
6.3.1	Characteristics of Hysteretic Curves	77
6.3.2	Typical Phases	78
6.4	Parametric Studies	79
6.4.1	Height of Concrete Flange $h_c$	79
6.4.2	Width of Concrete Flange $B_c$	79
6.4.3	Height of Steel Beam $h_s$	80
6.4.4	Strength Ratio $\gamma$	83
6.4.5	Yielding Strength of Steel $f_y$	84
6.4.6	Compressive Strength of Concrete $f_{ck}$	84

6.4.7	Summary of Parametric Studies	85
6.5	Simplified Hysteretic Model	86
6.5.1	Skeletal Curve	86
6.5.2	Hysteresis Model	89
<b>Chapter 7 Elasto-Plastic Stiffness Equation of Beam Element</b>		<b>93</b>
7.1	Plastic Hinge Theory	93
7.1.1	Hinge Formed at One End of Element	94
7.1.2	Hinge Formed at Both Ends of Element	97
7.2	Clough Model	97
7.3	Generalized Clough Model	98
7.4	Elasto-Plastic Hinge Model	99
7.4.1	Both Ends Yielding	102
7.4.2	Only End 1 Yielding	103
7.4.3	Only End 2 Yielding	103
7.4.4	Summary	104
7.5	Comparison Between Elasto-Plastic Hinge Model and Generalized Clough Model	104
7.5.1	Only End 1 Yielding	104
7.5.2	Both Ends Yielding	105
7.5.3	Numerical Example	106
7.6	Effects of Residual Stresses and Treatment of Tapered Element	107
7.6.1	Effects of Residual Stresses on Plasticity Spread Along Element Section	107
7.6.2	Effects of Residual Stresses on Plasticity Spread Along Element Length	109
7.6.3	Treatment of Tapered Element	110
7.7	Beam Element with Plastic Hinge Between Two Ends	110
7.8	Subdivided Model with Variable Stiffness for Composite Beam Element	113
7.8.1	Subdivided Model	113
7.8.2	Stiffness Equation of Composite Beam Element	114
7.9	Examples	117
7.9.1	A Steel Portal Frame with Prismatic Members	117
7.9.2	A Steel Portal Frame with Tapered Members	118
7.9.3	Vogel Portal Frame	119
7.9.4	Vogel Six-Storey Frame	120
7.9.5	A Single-Storey Frame with Mid-Span Concentrated Load	121
7.9.6	A Single-Storey Frame with Distributed Load	123
7.9.7	A Four-Storey Frame with Mid-Span Concentrated Load	124
7.9.8	A Two-Span Three-Storey Composite Frame	126
<b>Chapter 8 Elastic and Elasto-Plastic Stiffness Equations of Column Element</b>		<b>127</b>
8.1	Force and Deformation of Column Element	127
8.2	Elastic Stiffness Equation of Column Element Subjected to Biaxial Bending	127
8.3	Elasto-Plastic Stiffness Equations of Column Element Subjected to Biaxial Bending	129
8.3.1	Both Ends Yielding	131
8.3.2	Only End 1 Yielding	132
8.3.3	Only End 2 Yielding	133
8.3.4	Summary	133
8.4	Elastic and Elasto-Plastic Stiffness Equations of Column Element Subjected to Uniaxial Bending	134
8.5	Axial Stiffness of Tapered Column Element	135
8.5.1	Elastic Stiffness	135
8.5.2	Elasto-Plastic Stiffness	135
8.6	Experiment Verification	136
8.6.1	Experiment Specimen	136

viii CONTENTS

8.6.2	Set-Up and Instrumentation	139
8.6.3	Horizontal Loading Scheme	140
8.6.4	Theoretical Predictions of Experiments	141
8.6.5	Comparison of Analytical and Tested Results	144
<b>Chapter 9</b>	<b>Effects of Joint Panel and Beam–Column Connection</b>	<b>147</b>
9.1	Behaviour of Joint Panel	147
9.1.1	Elastic Stiffness of Joint Panel	147
9.1.2	Elasto-Plastic Stiffness of Joint Panel	149
9.2	Effect of Shear Deformation of Joint Panel on Beam/Column Stiffness	150
9.2.1	Stiffness Equation of Beam Element with Joint Panel	150
9.2.2	Stiffness Equation of Column Element with Joint Panel Subjected to Uniaxial Bending	153
9.2.3	Stiffness Equation of Column Element with Joint Panel Subjected to Biaxial Bending	154
9.3	Behaviour of Beam–Column Connections	155
9.3.1	Moment–Rotation Relationship	156
9.3.2	Hysteretic Behaviour	161
9.4	Effect of Deformation of Beam–Column Connection on Beam Stiffness	163
9.4.1	Stiffness Equation of Beam Element with Beam–Column Connections	164
9.4.2	Stiffness Equation of Beam Element with Connections and Joint Panels	166
9.5	Examples	166
9.5.1	Effect of Joint Panel	166
9.5.2	Effect of Beam–Column Connection	170
<b>Chapter 10</b>	<b>Brace Element and its Elastic and Elasto-Plastic Stiffness Equations</b>	<b>175</b>
10.1	Hysteretic Behaviour of Braces	175
10.2	Theoretical Analysis of Elastic and Elasto-Plastic Stiffnesses of Brace Element	175
10.3	Hysteretic Model of Ordinary Braces	181
10.4	Hysteretic Characteristics and Model of Buckling-Restrained Brace	183
10.5	Stiffness Equation of Brace Element	185
<b>Chapter 11</b>	<b>Shear Beam and its Elastic and Elasto-Plastic Stiffness Equations</b>	<b>187</b>
11.1	Eccentrically Braced Frame and Shear Beam	187
11.1.1	Eccentrically Braced Frame	187
11.1.2	Condition of Shear Beam	187
11.2	Hysteretic Model of Shear Beam	189
11.3	Stiffness Equation of Shear Beam	190
<b>Chapter 12</b>	<b>Elastic Stability Analysis of Planar Steel Frames</b>	<b>193</b>
12.1	General Analytical Method	193
12.2	Effective Length of Prismatic Frame Column	194
12.2.1	Concept of Effective Length	194
12.2.2	Assumption and Analytical Model	195
12.2.3	Formulations of Effective Length	197
12.2.4	Simplified Formula of Effective Length	202
12.2.5	Modification of Effective Length	203
12.2.6	Effect of Shear Deformation on Effective Length of Column	205
12.2.7	Examples	205
12.3	Effective Length of Tapered Steel Columns	211
12.3.1	Tapered Columns Under Different Boundary Conditions	211
12.3.2	Tapered Column in Steel Portal Frame	213

<b>Chapter 13 Nonlinear Analysis of Planar Steel Frames</b>	<b>219</b>
13.1 General Analysis Method	219
13.1.1 Loading Types	219
13.1.2 Criteria for the Limit State of Ultimate Load-Carrying Capacity	220
13.1.3 Analysis Procedure	221
13.1.4 Basic Elements and Unknown Variables	222
13.1.5 Structural Analysis of the First Loading Type	222
13.1.6 Structural Analysis of the Second Loading Type	223
13.1.7 Numerical Examples	223
13.2 Approximate Analysis Considering $P-\Delta$ Effect	226
13.2.1 Formulation	226
13.2.2 Example	227
13.3 Simplified Analysis Model Considering $P-\Delta$ Effect	228
13.3.1 Development of Simplified Model	228
13.3.2 Example	231
<b>Chapter 14 Seismic Response Analysis of Planar Steel Frames</b>	<b>233</b>
14.1 General Analysis Method	233
14.1.1 Kinetic Differential Equation	233
14.1.2 Solution of Kinetic Differential Equation	235
14.1.3 Determination of Mass, Stiffness and Damping Matrices	238
14.1.4 Numerical Example	240
14.2 Half-Frame Model	241
14.2.1 Assumption and Principle of Half-Frame	241
14.2.2 Stiffness Equation of Beam Element in Half-Frame	244
14.2.3 Numerical Examples	244
14.3 Shear-Bending Storey Model	248
14.3.1 Equivalent Stiffness	248
14.3.2 Inter-Storey Shear Yielding Parameters	251
14.3.3 Examples	252
14.4 Simplified Model for Braced Frame	255
14.4.1 Decomposition and Simplification of Braced Frame	255
14.4.2 Stiffness Matrix of Pure Frame	256
14.4.3 Stiffness Matrix of Pure Bracing System	257
14.4.4 Example	258
<b>Chapter 15 Analysis Model for Space Steel Frames</b>	<b>259</b>
15.1 Space Bar Model	259
15.1.1 Transformation from Local to Global Coordinates	259
15.1.2 Requirement of Rigid Floor	264
15.1.3 Global Stiffness Equation of Frame and Static Condensation	267
15.2 Planar Substructure Model	268
15.2.1 Stiffness Equation of Planar Substructure in Global Coordinates	268
15.2.2 Global Stiffness Equation of Spatial Frame	271
15.2.3 Numerical Example	272
15.3 Component Mode Synthesis Method	274
15.3.1 Principle of Component Mode Synthesis Method	274
15.3.2 Analysis of Generalized Elements	276
15.3.3 Stiffness Equation of Generalized Structure	281
15.3.4 Structural Analysis Procedure	282
15.3.5 Numerical Example	283

<b>Part Two Advanced Design of Steel Frames</b>	<b>287</b>
<b>Chapter 16 Development of Structural Design Approach</b>	<b>289</b>
16.1 Deterministic Design Approach	289
16.1.1 Allowable Stress Design (ASD) (AISC, 1989)	289
16.1.2 Plastic Design (PD) (AISC, 1978)	290
16.2 Reliability Design Approach Based on Limit States of Structural Members	290
16.3 Structural System Reliability Design Approach	292
<b>Chapter 17 Structural System Reliability Calculation</b>	<b>293</b>
17.1 Fundamentals of Structural Reliability Theory	293
17.1.1 Performance Requirements of Structures	293
17.1.2 Performance Function of Structures	293
17.1.3 Limit State of Structures	294
17.1.4 Structural Reliability	294
17.1.5 Reliability Index	296
17.2 The First-Order Second-Moment (FOSM) Methods for Structural Reliability Assessment	297
17.2.1 Central Point Method	298
17.2.2 Design Point Method	299
17.3 Effects of Correlation Among Random Variables	302
17.4 Structural System Reliability and Boundary Theory	302
17.4.1 Basic Concepts	302
17.4.2 Upper-Lower Boundary Method	305
17.5 Semi-Analytical Simulation Method for System Reliability	306
17.5.1 General Principle	306
17.5.2 Random Sampling	307
17.5.3 Exponential Polynomial Method (EPM)	309
17.6 Example	309
17.6.1 A Steel Beam Section	309
17.6.2 A Steel Portal Frame	313
<b>Chapter 18 System Reliability Assessment of Steel Frames</b>	<b>317</b>
18.1 Randomness of Steel Frame Resistance	317
18.2 Randomness of Loads	318
18.3 System Reliability Evaluation of Typical Steel Frames	319
18.3.1 Effect of Correlation Among Random Variables	319
18.3.2 Evaluation of Structural System Reliability Under Vertical Loads	320
18.3.3 Evaluation of Structural System Reliability Under Horizontal and Vertical Loads	323
18.4 Comparison of System Reliability Evaluation	325
<b>Chapter 19 Reliability-Based Advanced Design of Steel Frames</b>	<b>327</b>
19.1 Structural Design Based on System Reliability	327
19.1.1 Target Reliability of Design	327
19.1.2 Load and Load Combination	329
19.1.3 Practical Design Formula	329
19.2 Effect of Correlation on Load and Resistance Factors	335
19.3 Comparison of Different Design Methods	337
19.3.1 For Steel Portal Frames	337
19.3.2 For Multi-Storey Steel Frames	340
<b>References/Bibliography</b>	<b>345</b>
<b>Author Index</b>	<b>363</b>
<b>Subject Index</b>	<b>365</b>
