<i>Preface</i>	xi
1 Introduction	1
Part I Probability theory	7
2 Random variables	9
2.1 Probability theory and set theory	9
2.2 Discrete random variables	16
2.3 Continuous random variables	20
2.4 The conditional probability	26
2.5 Several random variables and independence	28
2.6 Conditional expectation	34
3 Basic distributions	37
3.1 Discrete random variables	37
3.2 Continuous random variables	43
3.3 Derived distributions	47
3.4 Functions of random variables	51
3.5 Examples of other distributions	54
3.6 Summary tables of probability distributions	58
3.7 Problems	59
4 Correlation	61
4.1 Generation of correlated Gaussian random variables	61
4.2 Generation of correlated random variables	67
4.3 The non-linear transformation method	68

4.4	Examples of the non-linear transformation method	74
4.5	Linear combination of independent auxiliary random variables	78
4.6	Problem	82
5	Inequalities	83
5.1	The minimum (maximum) and infimum (supremum)	83
5.2	Continuous convex functions	84
5.3	Inequalities deduced from the Mean Value Theorem	86
5.4	The Markov and Chebyshev inequalities	87
5.5	The Hölder, Minkowski and Young inequalities	90
5.6	The Gauss inequality	92
5.7	The dominant pole approximation and large deviations	94
6	Limit laws	97
6.1	General theorems from analysis	97
6.2	Law of Large Numbers	101
6.3	Central Limit Theorem	103
6.4	Extremal distributions	104
	Part II Stochastic processes	113
7	The Poisson process	115
7.1	A stochastic process	115
7.2	The Poisson process	120
7.3	Properties of the Poisson process	122
7.4	The nonhomogeneous Poisson process	129
7.5	The failure rate function	130
7.6	Problems	132
8	Renewal theory	137
8.1	Basic notions	138
8.2	Limit theorems	144
8.3	The residual waiting time	149
8.4	The renewal reward process	153
8.5	Problems	155
9	Discrete-time Markov chains	157
9.1	Definition	157

9.2	Discrete-time Markov chain	158
9.3	The steady-state of a Markov chain	168
9.4	Problems	177
10	Continuous-time Markov chains	179
10.1	Definition	179
10.2	Properties of continuous-time Markov processes	180
10.3	Steady-state	187
10.4	The embedded Markov chain	188
10.5	The transitions in a continuous-time Markov chain	193
10.6	Example: the two-state Markov chain in continuous-time	195
10.7	Time reversibility	196
10.8	Problems	199
11	Applications of Markov chains	201
11.1	Discrete Markov chains and independent random variables	201
11.2	The general random walk	202
11.3	Birth and death process	208
11.4	A random walk on a graph	218
11.5	Slotted Aloha	219
11.6	Ranking of webpages	224
11.7	Problems	228
12	Branching processes	229
12.1	The probability generating function	231
12.2	The limit W of the scaled random variables W_k	233
12.3	The Probability of Extinction of a Branching Process	237
12.4	Asymptotic behavior of W	240
12.5	A geometric branching processes	243
13	General queueing theory	247
13.1	A queueing system	247
13.2	The waiting process: Lindley's approach	252
13.3	The Beneš approach to the unfinished work	256
13.4	The counting process	263
13.5	PASTA	266
13.6	Little's Law	267
14	Queueing models	271

14.1	The M/M/1 queue	271
14.2	Variants of the M/M/1 queue	276
14.3	The M/G/1 queue	283
14.4	The GI/D/m queue	289
14.5	The M/D/1/K queue	296
14.6	The N*D/D/1 queue	300
14.7	The AMS queue	304
14.8	The cell loss ratio	309
14.9	Problems	312
Part III Physics of networks		317
15	General characteristics of graphs	319
15.1	Introduction	319
15.2	The number of paths with j hops	321
15.3	The degree of a node in a graph	322
15.4	Connectivity and robustness	325
15.5	Graph metrics	328
15.6	Random graphs	329
15.7	The hopcount in a large, sparse graph with unit link weights	340
15.8	Problems	346
16	The Shortest Path Problem	347
16.1	The shortest path and the link weight structure	348
16.2	The shortest path tree in K_N with exponential link weights	349
16.3	The hopcount h_N in the URT	354
16.4	The weight of the shortest path	359
16.5	The flooding time T_N	361
16.6	The degree of a node in the URT	366
16.7	The minimum spanning tree	373
16.8	The proof of the degree Theorem 16.6.1 of the URT	380
16.9	Problems	385
17	The efficiency of multicast	387
17.1	General results for $g_N(m)$	388
17.2	The random graph $G_p(N)$	392
17.3	The k -ary tree	401

17.4	The Chuang-Sirbu law	404
17.5	Stability of a multicast shortest path tree	407
17.6	Proof of (17.16): $g_N(m)$ for random graphs	410
17.7	Proof of Theorem 17.3.1: $g_N(m)$ for k -ary trees	414
17.8	Problem	416
18	The hopcount to an anycast group	417
18.1	Introduction	417
18.2	General analysis	419
18.3	The k -ary tree	423
18.4	The uniform recursive tree (URT)	424
18.5	Approximate analysis	431
18.6	The performance measure η in exponentially growing trees	432
<i>Appendix A</i>	Stochastic matrices	435
<i>Appendix B</i>	Algebraic graph theory	471
<i>Appendix C</i>	Solutions of problems	493
<i>Bibliography</i>		523
<i>Index</i>		529
