

Mark Summerfield

Second Edition

Programming in Python 3

A Complete Introduction to the
Python Language

Developer's Library

Contents

List of Tables	xv
Introduction	1
Chapter 1. Rapid Introduction to Procedural Programming ...	9
Creating and Running Python Programs	9
Python's "Beautiful Heart"	14
Piece #1: Data Types	14
Piece #2: Object References	16
Piece #3: Collection Data Types	18
Piece #4: Logical Operations	21
Piece #5: Control Flow Statements	26
Piece #6: Arithmetic Operators	30
Piece #7: Input/Output	33
Piece #8: Creating and Calling Functions	36
Examples	39
bigdigits.py	39
generate_grid.py	42
Summary	44
Exercises	47
Chapter 2. Data Types	51
Identifiers and Keywords	51
Integral Types	54
Integers	54
Booleans	58
Floating-Point Types	58
Floating-Point Numbers	59
Complex Numbers	62
Decimal Numbers	63
Strings	65
Comparing Strings	68
Slicing and Striding Strings	69
String Operators and Methods	71

String Formatting with the <code>str.format()</code> Method	78
Character Encodings	91
Examples	94
<code>quadratic.py</code>	94
<code>csv2html.py</code>	97
Summary	102
Exercises	104
Chapter 3. Collection Data Types	107
Sequence Types	107
Tuples	108
Named Tuples	111
Lists	113
Set Types	120
Sets	121
Frozen Sets	125
Mapping Types	126
Dictionaries	126
Default Dictionaries	135
Ordered Dictionaries	136
Iterating and Copying Collections	138
Iterators and Iterable Operations and Functions	138
Copying Collections	146
Examples	148
<code>generate_usernames.py</code>	149
<code>statistics.py</code>	152
Summary	156
Exercises	158
Chapter 4. Control Structures and Functions	159
Control Structures	159
Conditional Branching	159
Looping	161
Exception Handling	163
Catching and Raising Exceptions	163
Custom Exceptions	168
Custom Functions	171
Names and Docstrings	176
Argument and Parameter Unpacking	177

Accessing Variables in the Global Scope	180
Lambda Functions	182
Assertions	183
Example: make_html_skeleton.py	185
Summary	191
Exercise	192
Chapter 5. Modules	195
Modules and Packages	195
Packages	199
Custom Modules	202
Overview of Python's Standard Library	212
String Handling	213
Command-Line Programming	214
Mathematics and Numbers	216
Times and Dates	216
Algorithms and Collection Data Types	217
File Formats, Encodings, and Data Persistence	219
File, Directory, and Process Handling	222
Networking and Internet Programming	225
XML	226
Other Modules	228
Summary	230
Exercise	231
Chapter 6. Object-Oriented Programming	233
The Object-Oriented Approach	234
Object-Oriented Concepts and Terminology	235
Custom Classes	238
Attributes and Methods	238
Inheritance and Polymorphism	243
Using Properties to Control Attribute Access	246
Creating Complete Fully Integrated Data Types	248
Custom Collection Classes	261
Creating Classes That Aggregate Collections	261
Creating Collection Classes Using Aggregation	269
Creating Collection Classes Using Inheritance	276
Summary	283
Exercises	285

Chapter 7. File Handling	287
Writing and Reading Binary Data	292
Pickles with Optional Compression	292
Raw Binary Data with Optional Compression	295
Writing and Parsing Text Files	305
Writing Text	305
Parsing Text	307
Parsing Text Using Regular Expressions	310
Writing and Parsing XML Files	312
Element Trees	313
DOM (Document Object Model)	316
Manually Writing XML	319
Parsing XML with SAX (Simple API for XML)	321
Random Access Binary Files	324
A Generic BinaryRecordFile Class	324
Example: The BikeStock Module's Classes	332
Summary	336
Exercises	337
Chapter 8. Advanced Programming Techniques	339
Further Procedural Programming	340
Branching Using Dictionaries	340
Generator Expressions and Functions	341
Dynamic Code Execution and Dynamic Imports	344
Local and Recursive Functions	351
Function and Method Decorators	356
Function Annotations	360
Further Object-Oriented Programming	363
Controlling Attribute Access	363
Functors	367
Context Managers	369
Descriptors	372
Class Decorators	378
Abstract Base Classes	380
Multiple Inheritance	388
Metaclasses	390
Functional-Style Programming	395
Partial Function Application	398

Coroutines	399
Example: Valid.py	407
Summary	410
Exercises	411
Chapter 9. Debugging, Testing, and Profiling	413
Debugging	414
Dealing with Syntax Errors	414
Dealing with Runtime Errors	415
Scientific Debugging	420
Unit Testing	425
Profiling	432
Summary	437
Chapter 10. Processes and Threading	439
Using the Multiprocessing Module	440
Using the Threading Module	444
Example: A Threaded Find Word Program	446
Example: A Threaded Find Duplicate Files Program	449
Summary	454
Exercises	455
Chapter 11. Networking	457
Creating a TCP Client	458
Creating a TCP Server	464
Summary	471
Exercises	471
Chapter 12. Database Programming	475
DBM Databases	476
SQL Databases	480
Summary	487
Exercise	488
Chapter 13. Regular Expressions	489
Python's Regular Expression Language	490
Characters and Character Classes	490
Quantifiers	491
Grouping and Capturing	494
Assertions and Flags	496
The Regular Expression Module	499

Summary	509
Exercises	510
Chapter 14. Introduction to Parsing	513
BNF Syntax and Parsing Terminology	514
Writing Handcrafted Parsers	519
Simple Key-Value Data Parsing	519
Playlist Data Parsing	522
Parsing the Blocks Domain-Specific Language	525
Pythonic Parsing with PyParsing	534
A Quick Introduction to PyParsing	535
Simple Key-Value Data Parsing	539
Playlist Data Parsing	541
Parsing the Blocks Domain-Specific Language	543
<i>Parsing First-Order Logic</i>	548
Lex/Yacc-Style Parsing with PLY	553
Simple Key-Value Data Parsing	555
Playlist Data Parsing	557
Parsing the Blocks Domain-Specific Language	559
Parsing First-Order Logic	562
Summary	566
Exercise	568
Chapter 15. Introduction to GUI Programming	569
Dialog-Style Programs	572
Main-Window-Style Programs	578
Creating a Main Window	578
Creating a Custom Dialog	590
Summary	593
Exercises	593
Epilogue	595
Selected Bibliography	597
Index	599
