

The Chemistry of Process Development in Fine Chemical and Pharmaceutical Industry

Second Edition

C. SOMESWARA RAO

 **WILEY**

Asian Books Private Limited

Contents

Preface	(vii)
Acknowledgements	(ix)
Abbreviations	(xv)
1. The Nature of Process Development	1-53
1.1 Introduction	1
1.2 Desirable Goals of Process Development	1
1.3 Evolution of an R & D Process into a Process Technology	7
1.4 Scope and Limitations of Process Development	8
1.5 The Role of Chemical Engineers	13
1.6 Exploratory (Investigative) Approach to Optimization	16
1.7 Statistical Approaches and Automated Works Stations	34
1.8 Scale-up Considerations	39
1.9 Process Development in Relation to Plant Equipment	49
2. Survey of Some Organic Reactions in Relation to Process Development	54-118
2.1 Introduction	54
2.2 Preparation of Acid Chlorides from Carboxylic Acids	54
2.3 Friedel-Crafts Acylations Acylations	59
2.4 Grignard Reagents	64
2.5 The Wittig Reaction	74
2.6 Ozonolysis	79
2.7 The Mitsunobu Reaction	82
2.8 Photochemistry in Process Industry	87
2.9 Very Low Temperature (Cryogenic) Chemistry (-70° to -100°)	88
2.10 Reactions Under Very High Pressures	117
3. Chiral Technology	119-189
3.1 Introduction	119
3.2 Nature of Chirality	119
3.3 Basic Assumptions of Chiral Technology	120
3.4 Factors Responsible for the Rapid Growth of Chiral Technology	120
3.5 Techniques for Obtaining Single Enantiomers	121
3.6 The Chiral Pool	121
3.7 Biotechnology	122
3.8 Racemate Resolution Strategies	122
3.9 Simplified Methodologies for Optical Resolution	127
3.9 A Other Strategies for Racemate Resolution	130-143
3.9 B Asymmetric Synthesis	143
4. Strategies for Simplification of Organic Reactions and Processes	190-311
4.1 Introduction	190
4.2 Reaction Simplification Through in situ Generation of components	190
4.3 Process Simplification	217

5. Reagent Modification and Rate and Order of Addition of Reagents	312-370
5.1 Introduction	312
5.2 Supported Regents	313
5.3 Complex formation to Modify Reagent Reactivity	327
5.4 Effect of Aging of Reagents on Reactivity	343
5.5 Rate of Addition of Reagents	343
5.6 Order of Addition of Reagents	348
6. Additives for Reagents–Fine Tuning of Organic Reactions	371-481
6.1 Introduction	371
6.2 Water as an Additive	372
6.3 Covalent Organic Compounds as Additives	388
6.4 Ionic Organic Compounds as Additives	431
6.5 Metallorganics and Organolithiums as Additives	442
6.6 Inorganics as additives	450
7. Choosing A Reagent	482-648
7.1 Introduction	482
7.2 Safety Issues	482
7.3 Toxicity Consideration	486
7.4 Cost Consideration	487
7.5 Nasty By-products	487
7.6 Efficacy Rather Than Cost	487
7.7 Strategy Rather Than Reagent	488
7.8 Operational and Work–up Convenience	488
7.9 Improved Performance	488
7.9A Environmental Options in choosing a Reagent	546
8. By-Products from Side Reactions	649-689
8.1 Introduction	649
8.2 Sources of By-product Formation	649
9. Solvents and Solvents Effects	690-821
9.1 Introduction	690
9.2 Solvation and its Effect on Solubility and Reactivity	690
9.3 Solvent effects in Organic Reactions	699
9.4 Choosing a Solvent	740
9.5 Impurities in Solvents	752
9.6 Utility of Mixed Solvents	755
9.7 Liquid Products as Solvents	764
9.8 Some Relatively New Solvents	767
9.9 Aqueous Medium for Organic Reactions	772
9.10 No solvent is The Best Solvent	794
9.11 Molten Salts as Solvents	809
9.12 Room Temperature Ionic Liquids as Solvents	812
9.13 Supercritical Carbon Dioxide-a Safe and Green Solvent	821
10. Phase Transfer Catalysis	822-918
10.1 Introduction	822
10.2 Nature of PTC Reactions	824
10.3 Mechanistic Aspects	824

10.4	Factors Affecting PTC Reactions	827
10.5	Choosing a Phase Transfer Catalyst	886
10.6	Phase Transfer of Neutral Uncharged Molecules	898
10.7	Organometallic PTC	902
10.8	Exercising the PTC Option	918
11.	Work-up, Purity, and Purification	919-1015
11.1	Introduction	919
11.2	Classical Work-up	919
11.3	<i>Environmental Problems</i>	920
11.4	Two Typical Reactions Involving Classical Work-up	920
11.5	Work-up Procedures for a Variety of Reactions	923
11.6	Simplification of Reaction Work-up	958
11.7	Aqueous Biphasic Liquid Systems for Reactions	959
11.8	Other Types of Aqueous Biphasic Liquid Systems	960
11.9	Fluorous Biphasic Catalysis and Synthesis	961
11.10	Purity	967
11.11	Purification	981
12.	Safety Assessment of Chemical Process Technology	1016-1059
12.1	Introduction	1016
12.2	Early Detection and Prevention of Chemical Accidents	1020
12.3	Principles of Chemical Process Safety	1040
12.4	Reaction Runaway Scenarios	1046
12.5	Chemical Reaction Hazards	1048
12.6	Quantification of Chemical Hazards	1055
	References	1060-1262
	Chapter 1	1060-1068
	Chapter 2	1069-1091
	Chapter 3	1092-1117
	Chapter 4	1118-1145
	Chapter 5	1146-1162
	Chapter 6	1163-1179
	Chapter 7	1180-1203
	Chapter 8	1204-1206
	Chapter 9	1207-1225
	Chapter 10	1226-1243
	Chapter 11	1244-1257
	Chapter 12	1258-1262
	Index	
	General	1263-1279
	Reaction Type	1280-1294
	Reagents	1295-1311
