Contents

Chapter 1	Introduction.....	1
1.1	From Maintenance Management to Physical Asset Management	1
1.2	The Challenges of Physical Asset Management.....	2
1.2.1	Emerging Trends of Operation Strategies.....	2
1.2.2	Toughening Societal Expectations	2
1.2.3	Technological Changes.....	3
1.3	Improving Physical Asset Management.....	3
1.3.1	<i>Maintenance Excellence</i>	3
1.3.1.1	Strategic.....	4
1.3.1.2	Tactical	4
1.3.1.3	Continuous Improvements	6
1.3.2	Quantum Leaps.....	6
1.4	Reliability through the Operator: Total Productive Maintenance	6
1.5	Reliability by Design: Reliability-Centered Maintenance.....	8
1.6	Optimizing Maintenance and Replacement Decisions	12
1.7	The Quantitative Approach	15
1.7.1	Setting Objectives.....	16
1.7.2	Models	17
1.7.3	Obtaining Solutions from Models.....	20
1.7.4	Maintenance Control and Mathematical Models.....	22
References	24
Chapter 2	Component Replacement Decisions	27
2.1	<i>Introduction</i>	27
2.2	Optimal Replacement Times for Equipment Whose Operating Cost Increases with Use.....	30
2.2.1	Statement of Problem	30
2.2.2	Construction of Model	31
2.2.3	Numerical Example	33
2.2.4	Further Comments	34
2.2.5	Applications	36
2.2.5.1	Replacing the Air Filter in an Automobile.....	36
2.2.5.2	Overhauling Boiler Plant	37
2.3	Stochastic Preventive Replacement: Some Introductory Comments	38
2.4	Optimal Preventive Replacement Interval of Items Subject to Breakdown (Also Known as the Group or Block Policy).....	39

2.4.1	Statement of Problem.....	39
2.4.2	Construction of Model	40
2.4.3	Determination of $H(t)$	42
	2.4.3.1 Renewal Theory Approach.....	42
	2.4.3.2 Discrete Approach.....	44
2.4.4	Numerical Example.....	47
2.4.5	Further Comments.....	48
2.4.6	An Application: Optimal Replacement Interval for a Left-Hand Steering Clutch	48
2.5	Optimal Preventive Replacement Age of an Item Subject to Breakdown.....	49
	2.5.1 Statement of Problem.....	49
	2.5.2 Construction of Model	49
	2.5.3 Numerical Example.....	53
	2.5.4 Further Comments.....	54
	2.5.5 An Application: Optimal Bearing Replacement Age	55
2.6	Optimal Preventive Replacement Age of an Item Subject to Breakdown, Taking Account of the Times Required to Effect Failure and Preventive Replacements	56
	2.6.1 Statement of Problem.....	56
	2.6.2 Construction of Model	56
	2.6.3 Numerical Example	58
2.7	Optimal Preventive Replacement Interval or Age of an Item Subject to Breakdown: Minimization of Downtime.....	59
	2.7.1 Statement of Problem.....	59
	2.7.2 Construction of Models.....	59
	2.7.2.1 Model 1: Determination of the Optimal Preventive Replacement Interval	59
	2.7.2.2 Model 2: Determination of Optimal Preventive Replacement Age	60
	2.7.3 Numerical Examples	61
	2.7.3.1 Model 1: Replacement Interval	61
	2.7.3.2 Model 2: Replacement Age	62
	2.7.4 Further Comments.....	63
	2.7.5 Applications.....	63
	2.7.5.1 Replacement of Sugar Refinery Cloths	63
	2.7.5.2 Replacement of Sugar Feeds in a Sugar Refinery	63
2.8	Group Replacement: Optimal Interval between Group Replacements of Items Subject to Failure: The Lamp Replacement Problem.....	64
	2.8.1 Statement of Problem.....	64
	2.8.2 Construction of Model	65
	2.8.3 Numerical Example	66
	2.8.4 Further Comments.....	66
	2.8.5 An Application: Optimal Replacement Interval for a Group of 40 Valves in a Compressor.....	66

2.9	Further Replacement Models	67
2.9.1	Multistage Replacement	67
2.9.2	Optional Policies	68
2.9.3	Repairable Systems	69
2.10	Spare Parts Provisioning: Preventive Replacement Spares	72
2.10.1	Introduction.....	72
2.10.2	Construction of Model	72
2.10.2.1	The Constant-Interval Model.....	72
2.10.2.2	The Age-Based Preventive Replacement Model	73
2.10.3	Numerical Example	73
2.10.3.1	Constant-Interval Policy.....	73
2.10.3.2	Age-Based Policy	73
2.10.4	Further Comments.....	74
2.10.5	An Application: Cylinder Head Replacement -- Constant-Interval Policy	74
2.11	Spare Parts Provisioning: Insurance Spares.....	74
2.11.1	Introduction.....	74
2.11.2	Classes of Components	75
2.11.2.1	Nonrepairable Components.....	75
2.11.2.2	Normal Distribution Approach	76
2.11.2.3	Poisson Distribution Approach	76
2.11.2.4	Repairable Components	77
2.11.3	Cost Model	79
2.11.4	Further Comments	79
2.11.5	An Application: Electric Motors.....	80
2.12	Solving the Constant-Interval and Age-Based Models Graphically: Use of Glasser's Graphs.....	81
2.12.1	Introduction.....	81
2.12.2	Using Glasser's Graphs	83
2.12.3	Example	84
2.12.4	Calculation of the Savings	84
2.13	Solving the Constant-Interval and Age-Based Models Using the OREST Software	85
2.13.1	Introduction.....	85
2.13.2	Using OREST.....	86
2.13.3	Further Comments.....	88
	References	88
	Problems.....	89
Chapter 3	Inspection Decisions.....	99
3.1	Introduction.....	99
3.2	Optimal Inspection Frequency: Maximization of Profit.....	100
3.2.1	Statement of Problem.....	100
3.2.2	Construction of Model	101

3.2.3	Numerical Example	104
3.2.4	Further Comments	105
3.3	Optimal Inspection Frequency: Minimization of Downtime	106
3.3.1	Statement of Problem	106
3.3.2	Construction of Model	106
3.3.3	Numerical Example	107
3.3.4	Further Comments	107
3.3.5	An Application: Optimal Vehicle Fleet Inspection Schedule.....	108
3.4	Optimal Inspection Interval to Maximize the Availability of Equipment Used in Emergency Conditions, Such as a Protective Device	110
3.4.1	Statement of Problem	110
3.4.2	Construction of Model	111
3.4.3	Numerical Example	112
3.4.4	Further Comments	114
3.4.5	Exponential Failure Distribution and Negligible Time Required to Effect Inspection and Repair/Replacement.....	114
3.4.6	An Application: Pressure Safety Valves in an Oil and Gas Field	115
3.5	Optimizing Condition-Based Maintenance (CBM) Decisions	115
3.5.1	Introduction.....	115
3.5.2	The Proportional Hazards Model (PHM)	118
3.5.3	Blending Hazard and Economics: Optimizing the CBM Decision	119
3.5.4	Applications.....	120
3.5.4.1	Food Processing: Use of Vibration Monitoring	121
3.5.4.2	Coal Mining: Use of Oil Analysis.....	121
3.5.4.3	Transportation: Use of Visual Inspection	122
3.5.5	Further Comments	122
3.5.6	Software for CBM Optimization	124
3.5.6.1	Definition of an Event.....	125
	References	128
	Problems.....	130

Chapter 4 Capital Equipment Replacement Decisions.....135

4.1	Introduction.....	135
4.2	Optimal Replacement Interval for Capital Equipment: Minimization of Total Cost	137
4.2.1	Statement of Problem	137
4.2.2	Construction of Model	137
4.2.3	Numerical Example	138
4.2.4	Further Comments	139
4.2.5	Applications	141

	4.2.5.1	Mobile Equipment: Vehicle Fleet Replacement	141
	4.2.5.2	Fixed Equipment: Internal Combustion Engine	143
4.3		Optimal Replacement Interval for Capital Equipment: Maximization of Discounted Benefits	145
	4.3.1	Statement of Problem	145
	4.3.2	Construction of Model	145
	4.3.2.1	First Cycle of Operation	146
	4.3.2.2	Second Cycle of Operation	147
	4.3.2.3	Third Cycle of Operation	147
	4.3.2.4	n th Cycle of Operation	148
	4.3.3	Numerical Example	149
	4.3.4	Further Comments	150
	4.3.5	Proof that Optimization over a Long Period Is Not Equivalent to Optimization per Unit Time When Discounting Is Included	151
4.4		Optimal Replacement Interval for Capital Equipment Whose Planned Utilization Pattern Is Variable: Minimization of Total Cost ...	152
	4.4.1	Statement of Problem	152
	4.4.2	Construction of Model	152
	4.4.2.1	Consider a Replacement Cycle of n Years	153
	4.4.3	Numerical Example	154
	4.4.4	Further Comments	155
	4.4.5	An Application: Establishing the Economic Life of a Fleet of Buses	158
4.5		Optimal Replacement Policy for Capital Equipment Taking into Account Technological Improvement: Finite Planning Horizon	158
	4.5.1	Statement of Problem	158
	4.5.2	Construction of Model	159
	4.5.3	Numerical Example	160
	4.5.4	Further Comments	162
	4.5.5	An Application: Replacing Current Mining Equipment with a Technologically Improved Version	162
4.6		Optimal Replacement Policy for Capital Equipment Taking into Account Technological Improvement: Infinite Planning Horizon	163
	4.6.1	Statement of Problem	163
	4.6.2	Construction of Model	163
	4.6.3	Numerical Example	164
	4.6.4	Further Comments	166
	4.6.5	An Application: Repair vs. Replace of a Front-End Loader	166
4.7		Software for Economic Life Optimization	168
	4.7.1	Introduction	168
	4.7.2	Using PERDEC and AGE/CON	169
	4.7.3	Further Comments	170
		References	170
		Problems	171

Chapter 5	Maintenance Resource Requirements	181
5.1	Introduction.....	181
5.1.1	The Facilities for Maintenance within an Organization	181
5.1.2	The Combined Use of the Facilities within an Organization and Outside Resources	182
5.2	Queuing Theory Preliminaries	183
5.2.1	Queuing Systems	183
5.2.2	Queuing Theory Results	185
5.2.2.1	Single-Channel Queuing System	185
5.2.2.2	Multichannel Queuing Systems	185
5.3	Optimal Number of Workshop Machines to Meet a Fluctuating Workload.....	186
5.3.1	Statement of Problem	186
5.3.2	Construction of Model	187
5.3.3	Numerical Example	187
5.3.4	Further Comments	190
5.3.5	Applications	191
5.3.5.1	Optimizing the Backlog	191
5.3.5.2	Crew Size Optimization	191
5.4	Optimal Mix of Two Classes of Similar Equipment (such as Medium/Large Lathes) to Meet a Fluctuating Workload.....	192
5.4.1	Statement of Problem	192
5.4.2	Construction of Model	193
5.4.2.1	Logic Flowchart	194
5.4.2.2	Obtaining Necessary Information and Constructing Model	194
5.4.3	Numerical Example	196
5.4.4	Further Comments	202
5.4.5	Applications	204
5.4.5.1	Establishing the Optimal Number of Lathes in a Steel Mill	204
5.4.5.2	Balancing Maintenance Cost and Reliability in a Thermal Generating Station	206
5.5	Rightsizing a Fleet of Equipment: An Application	207
5.5.1	An Application: Fleet Size in an Open-Pit Mine	208
5.6	Optimal Size of a Maintenance Workforce to Meet a Fluctuating Workload, Taking Account of Subcontracting Opportunities.....	209
5.6.1	Statement of Problem	209
5.6.2	Construction of Model	210
5.6.3	Numerical Example	213
5.6.4	Further Comments	214
5.6.5	An Example: Number of Vehicles to Have in a Fleet (such as a Courier Fleet).....	214
5.7	The Lease or Buy Decision.....	215
5.7.1	Statement of Problem.....	215

5.7.2	Solution of Problem	216
5.7.2.1	Use of Retained Earnings	216
5.7.2.2	Use of Borrowed Funds	217
5.7.2.3	Leasing	218
5.7.2.4	Conclusion.....	219
5.7.3	Further Comments	219
	References	219
	Problems.....	220

Appendix 1 Statistics Primer.....221

A1.1	Introduction	221
A1.2	Relative Frequency Histogram	221
A1.3	Probability Density Function.....	222
A1.3.1	Hyperexponential	223
A1.3.2	Exponential.....	224
A1.3.3	Normal.....	225
A1.3.4	Weibull.....	225
A1.4	Cumulative Distribution Function	226
A1.5	Reliability Function	226
A1.6	Hazard Rate.....	230
	Reference.....	233
	Further Reading.....	233
	Problems.....	233

Appendix 2 Weibull Analysis.....235

A2.1	Weibull Distribution.....	235
A2.1.1	Shape Parameter.....	235
A2.1.2	Scale Parameter	236
A2.1.3	Location Parameter	238
A2.1.4	Fitting a Distribution Model to Sample Data.....	238
A2.2	Weibull Paper	239
A2.3	Weibull Plot	239
A2.3.1	Estimating Cumulative Percent Failure, $F(t)$	239
A2.3.2	Estimating the Parameters.....	241
A2.3.3	Nonlinear Plot	244
A2.4	Confidence Interval of Weibull Plot.....	248
A2.5	B_q Life	251
A2.6	Kolmogorov–Smirnov Goodness-of-Fit Test	251
A2.7	Analyzing Failure Data with Suspensions	255
A2.8	Analyzing Grouped Failure Data with Multiple Suspensions	259
A2.9	Analyzing Competing Failure Data.....	261
A2.10	Hazard Plot	263
A2.10.1	Nonlinear Plot	264

A2.11 Other Approaches to Weibull Analysis	266
A2.12 Analyzing Trends of Failure Data	267
A2.12.1 Machine H	268
A2.12.2 Machine S	269
References	270
Further Reading	270
Problems	271
Appendix 3 Time Value of Money: Discounted Cash Flow Analysis	279
A3.1 Introduction	279
A3.2 Present Value Formulas	281
A3.3 Determination of Appropriate Interest Rate	284
A3.4 Inflation	285
A3.5 The Equivalent Annual Cost	285
A3.6 Example: Selecting an Alternative — A One-Shot Decision	286
A3.7 Further Comments	288
References	288
Appendix 4 List of Applications of Maintenance Decision Optimization Models	289
Appendix 5 Ordinates of the Standard Normal Distribution	293
Appendix 6 Areas in the Tail of the Standard Normal Distribution	295
Appendix 7 Values of Gamma Function	299
Appendix 8 Median Ranks Table	301
Appendix 9 Five Percent Ranks Table	303
Appendix 10 Ninety-Five Percent Ranks Table	305
Appendix 11 Critical Values for the Kolmogorov–Smirnov Statistic (d_α)	307
Appendix 12 Answers to Problems	309
Index	315
