Preface	xv
1 Introduction	1
1.1 Objective and Scope of This Book	1
1.2 General Thermodynamic Definitions	5
2 Definitions and Laws of Substance	9
2.1 Equation of State	9
2.2 State Parameters of Substance	11
2.2.1 Pressure	11
2.2.2 Temperature	12
2.3 Energy of Substance	14
2.4 Energy Transfer	16
2.4.1 Work	16
2.4.2 Heat	17
2.5 Entropy of Substance	19
2.6 Exergy of Substance	20
2.6.1 Traditional Exergy	20
2.6.2 Gravitational Interpretation of Exergy	23
2.6.3 Exergy Annihilation Law	28
2.6.4 Exergy Transfer During Heat and Work	31
2.7 Chemical Exergy of Substance	31
Nomenclature for Chapter 2	33
3 Definitions and Laws of Radiation	37
3.1 Radiation Source	37
3.2 Radiant Properties of Surfaces	39
3.3 Definitions of the Radiation of Surfaces	41
3.4 Planck's Law	43
3.5 Wien's Displacement Law	47
3.6 Stefan-Boltzmann Law	48
3.7 Lambert's Cosine Law	50
3.8 Kirchhoff's Law	53
Nomenclature for Chapter 3	55

- 4 The Laws of Thermodynamic Analysis 57
 - 4.1 Outline of Thermodynamic Analysis 57
 - 4.1.1 Significance of Thermodynamic Analysis 57
 - 4.1.2 General Remarks and Definition of the Considered Systems 59
 - 4.2 Substance and Mass Conservation 60
 - 4.3 Energy Conservation Law 62
 - 4.3.1 Energy Balance Equations 62
 - 4.3.2 Components of the Energy Balance Equation 64
 - 4.4 Entropy Growth 66
 - 4.5 Exergy Balance Equation 68
 - 4.5.1 Traditional Exergy Balance 68
 - 4.5.2 Components of the Traditional Exergy Balance Equation 70
 - 4.5.3 Exergy Balance at Varying Environment Parameters 71
 - 4.5.4 Exergy Balance with Gravity Input 73
 - 4.6 Process Efficiency 79
 - 4.6.1 Carnot Efficiency 79
 - 4.6.2 Perfection Degree of Process 84
 - 4.6.3 Specific Efficiencies 86
 - 4.6.4 Remarks on the Efficiency of Radiation Conversion 87
 - 4.6.5 Consumption Indices 87
 - 4.7 Method of Reconciliation of the Measurement Data 89
 - Nomenclature for Chapter 4 94
- 5 Thermodynamic Properties of Photon Gas 97
 - 5.1 Nature of Photon Gas 97
 - 5.2 Temperature of Photon Gas 101
 - 5.3 Energy of Photon Gas 105
 - 5.4 Pressure of Photon Gas 106
 - 5.5 Entropy of Photon Gas 112
 - 5.6 Isentropic Process of Photon Gas 113
 - 5.7 Exergy of Photon Gas 113
 - 5.8 Mixing Photon Gases 116
 - 5.9 Analogies Between Substance and Photon Gases 117
 - Nomenclature for Chapter 5 122
- 6 Exergy of Emission 125
 - 6.1 Basic Explanations 125

6.2	Derivation of the Emission Exergy	
	Formula	126
6.3	Analysis of the Formula of the Exergy of Emission	129
6.4	Efficiency of Radiation Processes	132
	6.4.1 Radiation-to-Work Conversion	132
	6.4.2 Radiation-to-Heat Conversion	136
	6.4.3 Other Processes Driven by Radiation	139
6.5	Irreversibility of Radiative Heat Transfer	140
6.6	Irreversibility of Emission and Absorption of Radiation	143
6.7	Influence of Surroundings on the Radiation Exergy	146
	6.7.1 Emissivity of the Environment	146
	6.7.2 Configuration of Surroundings	147
	6.7.3 Presence of Other Surfaces	149
6.8	"Cold" Radiation	151
6.9	Radiation Exergy at Varying Environmental Temperatures	153
6.10	Radiation of Surface of Nonuniform Temperature	160
	6.10.1 Emission Exergy at Continuous Surface Temperature Distribution	160
	6.10.2 Effective Temperature of a Nonisothermal Surface	161
	Nomenclature for Chapter 6	165
7	Radiation Flux	167
	7.1 Energy of Radiation Flux	167
	7.2 Entropy of Radiation Flux	171
	7.2.1 Entropy of the Monochromatic Intensity of Radiation	171
	7.2.2 Entropy of Emission from a Black Surface	172
	7.2.3 Entropy of Arbitrary Radiosity	173
	7.3 Exergy of Radiation Flux	175
	7.3.1 Arbitrary Radiation	175
	7.3.2 Polarized Radiation	178
	7.3.3 Nonpolarized Radiation	178
	7.3.4 Nonpolarized and Uniform Radiation	179
	7.3.5 Nonpolarized, Uniform Radiation in a Solid Angle 2π	179

7.3.6	Nonpolarized, Black, Uniform Radiation in a Solid Angle 2π	181
7.3.7	Nonpolarized, Black, Uniform Radiation Within a Solid Angle ω	181
7.4	Propagation of Radiation	182
7.4.1	Propagation in a Vacuum	182
7.4.2	Some Remarks on Propagation in a Real Medium	185
7.5	Radiation Exergy Exchange Between Surfaces	187
7.5.1	View Factor	187
7.5.2	Emission Exergy Exchange Between Two Black Surfaces	194
7.5.3	Exergy Exchange Between Two Gray Surfaces	196
7.6	Exergy of Solar Radiation	208
7.6.1	Significance of Solar Radiation	208
7.6.2	Possibility of Concentration of Solar Radiation	211
	Nomenclature for Chapter 7	216
8	Radiation Spectra of a Surface	219
8.1	Introductory Remarks	219
8.2	Energy Radiation Spectrum of a Surface	220
8.3	Entropy Radiation Spectrum of a Surface	221
8.4	Radiation Exergy Derived from Exergy Definition	223
8.5	Exergy Radiation Spectrum of a Surface	227
8.5.1	Spectrum of a Black Surface	227
8.5.2	Spectrum of a Gray Surface	233
8.5.3	Exergetic Emissivity	235
8.6	Application of Exergetic Spectra for Exergy Exchange Calculation	239
8.7	Conclusion	243
	Nomenclature for Chapter 8	244
9	Discussion of Radiation Exergy Formulae Proposed by Researchers	247
9.1	Polemic Addressees	247
9.2	What Work Represents Exergy?	248
9.3	Is Radiation Matter Heat?	250
9.4	Bejan's Discussion	254
9.5	Discussion by Wright et al.	259
9.6	Other Authors	259
9.7	Summary	261
	Nomenclature for Chapter 9	262

10	Thermodynamic Analysis of Heat from the Sun . . .	265
10.1	Introduction	265
10.2	Global Warming Effect	266
10.3	Effect of a Canopy	268
10.4	Evaluation of Solar Radiation Conversion into Heat	272
10.5	Thermodynamic Analysis of the Solar Cylindrical–Parabolic Cooker	279
10.5.1	Introductory Remarks	279
10.5.2	Description of the SCPC	281
10.5.3	Mathematical Model for Energy Analysis of the SCPC	282
10.5.4	Mathematical Consideration of the Exergy Analysis of an SCPC	285
10.5.5	Conclusion Regarding the Solar Cylindrical–Parabolic Cooker	300
	Nomenclature for Chapter 10	300
11	Thermodynamic Analysis of a Solar Chimney Power Plant	303
11.1	Introduction	303
11.2	Description of the Plant as the Thermodynamic Problem	304
11.3	The Main Assumptions for the Simplified Mathematical Model of the SCPP	308
11.4	Energy Analysis	310
11.5	Exergy Analysis	321
11.6	Exergy Analysis Using the Mechanical Exergy Component for a Substance	325
11.7	Trends of Response for the Varying Input Parameters	327
	Nomenclature for Chapter 11	330
12	Thermodynamic Analysis of Photosynthesis	333
12.1	Objectives of the Chapter	333
12.2	Simplified Description of Photosynthesis	334
12.3	Some Earlier Work About Photosynthesis	335
12.4	Assumptions Defining the Simplified Mathematical Model of Photosynthesis	336
12.5	Properties of Substance	339
12.5.1	Energy of Substance	339
12.5.2	Entropy of Substance	340
12.5.3	Exergy of Substance	340
12.6	Radiation Properties	341
12.6.1	Energy of Radiation	341

Contents

12.6.2	Entropy of Radiation	342
12.6.3	Exergy of Radiation	343
12.7	Balances Equations	344
12.7.1	Mass Conservation Equations	344
12.7.2	Energy Equation	345
12.7.3	Entropy Equation	346
12.7.4	Exergy Equations	346
12.8	Perfection Degrees of Photosynthesis	347
12.9	Some Aspects Inspired by the Example	
	Calculations	349
12.9.1	Trends Responsive to Varying Input	
	Parameters	349
12.9.2	Relation Between the Environment	
	Temperature, Leaf Temperature, and	
	Rate of Sugar Generation	352
12.9.3	Ratio of Vaporized Water and	
	Assimilated Carbon Dioxide Rates	353
12.9.4	Exergy Losses in the Component	
	Processes of Photosynthesis	354
12.9.5	Increased Carbon Dioxide	
	Concentration in the Leaf	
	Surroundings	356
12.9.6	Remarks on the Photosynthesis	
	Degree of Perfection	357
12.10	Concluding Remarks	358
	Nomenclature for Chapter 12	362
13	Thermodynamic Analysis of the Photovoltaic	365
13.1	Significance of the Photovoltaic	365
13.2	General Description of the Photovoltaic	366
13.3	Simplified Thermodynamic Analysis of a	
	Solar Cell	367
	Nomenclature for Chapter 13	371
	References	373
	Appendix	379
A.1	Prefixes to Derive Names of Secondary	
	Units	379
A.2	Typical Constant Values for Radiation and	
	Substance	379
A.3	Application of Mathematics to Some	
	Thermodynamic Relations	380
A.4	Review of Some Radiation Energy	
	Variables	382

A.5	Review of Some Radiation Entropy Variables	384
A.6	Review of Some Radiation Exergy Variables	386
A.7	Exergy of Liquid Water	387
Index		389
