# Electromagnetic Band Gap Structures in Antenna Engineering

THE CAMBRIDGE RF AND MICROWAVE ENGINEERING SERIES

# Contents

	<i>Preface</i>	<i>page</i> ix
	<i>Acknowledgements</i>	xi
	<i>Abbreviations</i>	xii
<b>1</b>	<b>Introduction</b>	<b>1</b>
	1.1 Background	1
	1.2 Electromagnetic band gap (EBG) structures	2
	1.2.1 EBG definition	2
	1.2.2 EBG and metamaterials	4
	1.3 Analysis methods for EBG structures	6
	1.4 EBG applications in antenna engineering	8
	1.4.1 Antenna substrates for surface wave suppressions	8
	1.4.2 Antenna substrates for efficient low profile wire antenna designs	9
	1.4.3 Reflection/transmission surfaces for high gain antennas	10
<b>2</b>	<b>FDTD method for periodic structure analysis</b>	<b>14</b>
	2.1 FDTD fundamentals	14
	2.1.1 Introduction	14
	2.1.2 Yee's cell and updating scheme	15
	2.1.3 Absorbing boundary conditions: PML	18
	2.1.4 FDTD excitation	22
	2.1.5 Extraction of characteristic parameters	23
	2.2 Periodic boundary conditions	24
	2.2.1 Fundamental challenges in PBC	24
	2.2.2 Overview of various PBCs	25
	2.2.3 Constant $k_x$ method for scattering analysis	26
	2.3 Guided wave analysis	30
	2.3.1 Problem statement	30
	2.3.2 Brillouin zone for periodic waveguides	31
	2.3.3 Examples	33
	2.4 Plane wave scattering analysis	37
	2.4.1 Problem statement	38
	2.4.2 Plane wave excitation	39
	2.4.3 Examples	41

2.5	A unified approach: hybrid FDTD/ARMA method	45
2.5.1	A unified approach for guided wave and scattering analysis	45
2.5.2	ARMA estimator	49
2.5.3	Examples	51
2.6	Projects	54
<b>3</b>	<b>EBG characterizations and classifications</b>	<b>59</b>
3.1	Resonant circuit models for EBG structures	59
3.1.1	Effective medium model with lumped LC elements	59
3.1.2	Transmission line model for surface waves	61
3.1.3	Transmission line model for plane waves	62
3.2	Graphic representation of frequency band gap	63
3.2.1	FDTD model	63
3.2.2	Near field distributions inside and outside the frequency band gap	65
3.3	Frequency band gap for surface wave propagation	67
3.3.1	Dispersion diagram	67
3.3.2	Surface wave band gap	68
3.4	In-phase reflection for plane wave incidence	69
3.4.1	Reflection phase	69
3.4.2	EBG reflection phase: normal incidence	70
3.4.3	EBG reflection phase: oblique incidence	71
3.5	Soft and hard surfaces	74
3.5.1	Impedance and reflection coefficient of a periodic ground plane	75
3.5.2	Soft and hard operations	77
3.5.3	Examples	80
3.6	Classifications of various EBG structures	84
3.7	Project	85
<b>4</b>	<b>Designs and optimizations of EBG structures</b>	<b>87</b>
4.1	Parametric study of a mushroom-like EBG structure	87
4.1.1	Patch width effect	87
4.1.2	Gap width effect	89
4.1.3	Substrate thickness effect	89
4.1.4	Substrate permittivity effect	90
4.2	Comparison of mushroom and uni-planar EBG designs	91
4.3	Polarization-dependent EBG surface designs	95
4.3.1	Rectangular patch EBG surface	95
4.3.2	Slot loaded EBG surface	97
4.3.3	EBG surface with offset vias	97
4.3.4	An example application: PDEBG reflector	99
4.4	Compact spiral EBG designs	103
4.4.1	Single spiral design	103

4.4.2	Double spiral design	105
4.4.3	Four-arm spiral design	105
4.5	Dual layer EBG designs	107
4.6	Particle swarm optimization (PSO) of EBG structures	112
4.6.1	Particle swarm optimization: a framework	112
4.6.2	Optimization for a desired frequency with a $+90^\circ$ reflection phase	113
4.6.3	Optimization for a miniaturized EBG structure	117
4.6.4	General steps of EBG optimization problems using PSO	118
4.7	Advanced EBG surface designs	120
4.7.1	Space filling curve EBG designs	120
4.7.2	Multi-band EBG surface designs	120
4.7.3	Tunable EBG surface designs	120
4.8	Projects	124
<b>5</b>	<b>Patch antennas with EBG structures</b>	<b>127</b>
5.1	Patch antennas on high permittivity substrate	127
5.2	Gain enhancement of a single patch antenna	130
5.2.1	Patch antenna surrounded by EBG structures	130
5.2.2	Circularly polarized patch antenna design	132
5.2.3	Various EBG patch antenna designs	136
5.3	Mutual coupling reduction of a patch array	138
5.3.1	Mutual coupling between patch antennas on high dielectric constant substrate	139
5.3.2	Mutual coupling reduction by the EBG structure	142
5.3.3	More design examples	147
5.4	EBG patch antenna applications	149
5.4.1	EBG patch antenna for high precision GPS applications	149
5.4.2	EBG patch antenna for wearable electronics	149
5.4.3	EBG patch antennas in phased arrays for scan blindness elimination	151
5.5	Projects	153
<b>6</b>	<b>Low profile wire antennas on EBG ground plane</b>	<b>156</b>
6.1	Dipole antenna on EBG ground plane	156
6.1.1	Comparison of PEC, PMC, and EBG ground planes	156
6.1.2	Operational bandwidth selection	158
6.1.3	Parametric studies	161
6.2	Low profile antennas: wire-EBG antenna vs. patch antenna	164
6.2.1	Two types of low profile antennas	164
6.2.2	Performance comparison between wire-EBG and patch antennas	166
6.2.3	A dual band wire-EBG antenna design	169

6.3	Circularly polarized curl antenna on EBG ground plane	171
6.3.1	Performance of curl antennas over PEC and EBG ground planes	172
6.3.2	Parametric studies of curl antennas over the EBG surface	175
6.3.3	Experimental demonstration	178
6.4	Dipole antenna on a PDEBG ground plane for circular polarization	180
6.4.1	Radiation mechanism of CP dipole antenna	181
6.4.2	Experimental results	182
6.5	Reconfigurable bent monopole with radiation pattern diversity	185
6.5.1	Bent monopole antenna on EBG ground plane	186
6.5.2	Reconfigurable design for one-dimensional beam switch	188
6.5.3	Reconfigurable design for two-dimensional beam switch	191
6.6	Printed dipole antenna with a semi-EBG ground plane	191
6.6.1	Dipole antenna near the edge of a PEC ground plane	193
6.6.2	Enhanced performance of dipole antenna near the edge of an EBG ground plane	194
6.6.3	Printed dipole antenna with a semi-EBG ground plane	195
6.7	Summary	200
6.8	Projects	200
<b>7</b>	<b>Surface wave antennas</b>	<b>203</b>
7.1	A grounded slab loaded with periodic patches	203
7.1.1	Comparison of two artificial ground planes	203
7.1.2	Surface waves in the grounded slab with periodic patch loading	206
7.2	Dipole-fed surface wave antennas	209
7.2.1	Performance of a low profile dipole on a patch-loaded grounded slab	209
7.2.2	Radiation mechanism: the surface wave antenna	212
7.2.3	Effect of the finite artificial ground plane	215
7.2.4	Comparison between the surface wave antenna and vertical monopole antenna	217
7.3	Patch-fed surface wave antennas	217
7.3.1	Comparison between a circular microstrip antenna and a patch-fed SWA	218
7.3.2	Experimental demonstration	223
7.4	Dual band surface wave antenna	223
7.4.1	Crosspatch-fed surface wave antenna	226
7.4.2	Modified crosspatch-fed surface wave antenna for dual band operation	228
7.5	Projects	236
	<i>Appendix: EBG literature review</i>	238
	<i>Index</i>	261
