

SECOND EDITION

CLIMATE CHANGE

The Science, Impacts and Solutions

A. BARRIE PITTOCK

CONTENTS

Foreword	ix
Acknowledgements	xi
Introduction	xiii
1 Climate change matters	1
Turning up the heat	2
Why is the present rapid warming happening?	7
The importance of delayed climate responses	10
Observed impacts	12
Trends in human vulnerability	15
Projections of future climate change	16
Facing the challenge	17
Conclusion	18
Endnotes	19
2 Learning from the past	23
Proxy data: clues from the past	24
The record of the ice ages	26
The causes of past climate change	27
Variations in the Earth's orbit	28
Role of greenhouse gases in amplifying climate changes	29
Variations in solar output	30
Volcanoes, cosmic collisions and aerosols	31
Rapid climate changes in the past	32
The last 10 000 years	35
Conclusions from the past record	37
Endnotes	39
3 Projecting the future	43
The need for, and nature of, foresight	43
Predictions, scenarios and projections	44

The emissions scenarios used by the IPCC	45
Projections of socio-economic futures	49
Forecasting the weather	51
Why climate projections are different	52
How good are climate models?	53
The state of climate projections	56
Endnotes	57
4 Uncertainty is inevitable, but risk is certain	59
Despite uncertainties, decisions have to be made	59
Uncertainty in climate change projections	60
From polarisation to probability and risk	63
Estimating risk	67
Uncertainty and the role of sceptics	69
<i>Application of the 'precautionary principle'</i>	73
Endnotes	74
5 What climate changes are likely?	77
Projected climate changes	78
Surface warming	80
<i>Regional warmings</i>	82
Precipitation and evaporation	82
Extreme events	84
Sea-level rise	87
Thresholds and abrupt or irreversible changes	93
Scenarios in a nutshell	97
Endnotes	99
6 Impacts: why be concerned?	107
Climate change impacts – reasons for concern	109
Thresholds and abrupt changes	110
Risks to unique and threatened systems	111
Risks from extreme climate events	115
Distribution of impacts	118
Aggregate impacts	121

Waking the sleeping giants	122
Effects of a breakdown in the ocean circulation	122
Rapid sea-level rise from melting ice sheets	124
Runaway carbon dynamics	125
Security implications	126
Stabilisation of greenhouse gas concentrations	126
Growing reasons for concern	128
Endnotes	129
7 Adaptation: living with climate change	133
Adaptation concepts and strategies	133
Costs and benefits of adaptation	136
Implementation	137
Effects of different rates of climatic change	140
Equity issues in adaptation	141
Enhancing adaptive capacity	144
Endnotes	145
8 Mitigation: limiting climate change	149
Why mitigation is necessary	149
Targets: how much mitigation is needed?	150
Where we are now	157
How difficult is mitigation?	159
The looming peak in oil production	165
Mitigation options	167
Increased energy efficiency	167
Changes in infrastructure and behaviour	170
Fuel substitution	172
Nuclear power	174
Hydropower	176
Solar energy	177
Wind power	180
Biomass energy	182
Tidal and wave energy	186

Geothermal power	187
The hydrogen economy	188
Carbon capture and sequestration	190
Land-based carbon sinks	194
Geoengineering possibilities	197
Technological innovation: attitude is vital	201
The road to effective mitigation	202
Endnotes	206
9 Climate change in context	223
Surface air pollution and climate change	225
Stratospheric ozone depletion	225
Land-use change, biodiversity, agriculture and forestry	226
Land degradation and desertification	227
Freshwater supply	227
Population growth	229
Synergies and trade-offs	231
Integration, sustainable development and equity	232
Postscript: connections between economic and climate crises	234
Endnotes	236
10 The politics of greenhouse	239
Is the science credible?	239
What about the uncertainty?	241
How realistic are the scenarios?	242
Choosing global and local emissions targets	243
How urgently do we need to act?	246
How much will reducing emissions cost?	247
Meeting targets most efficiently	249
International equity: what is fair?	254
The importance of equity within countries	260
Equity between generations	261
The role of governments and NGOs	262
What role should business take?	264

The role of state and local governments	268
So what are the politics of greenhouse?	270
Endnotes	271
11 International concern and national interests	277
A brief history	277
The Kyoto Protocol	280
National interests and climate change	282
African nations	283
Australia and New Zealand	284
China	289
European Union	291
India, Pakistan and Bangladesh	293
Latin America	295
The Russian Federation	296
Small Island States	298
United States of America	300
The common interest in global solutions	306
Endnotes	307
12 Accepting the challenge	317
Looking beyond the Kyoto Protocol	321
Addressing the key issues	324
Endnotes	326
Glossary (with acronyms)	329
Index	337
