

*Second Edition*

# Design for Environment

**A Guide to Sustainable Product Development** | Joseph Fiksel

Green Manufacturing  
& Systems Engineering

# Contents

|   |           |
|---|-----------|
| Preface .....   | xv        |
| Acknowledgments .....                                 | xvii      |
| <b>1 Introduction .....</b>                           | <b>1</b>  |
| A Sense of Urgency .....                              | 1         |
| The Basic Premise .....                               | 3         |
| The Hidden Mountain .....                             | 4         |
| The Emergence of DFE .....                            | 6         |
| DFE Implementation Challenges .....                   | 10        |
| Using This Book .....                                 | 11        |
| <hr/>   |           |
| <b>Part 1 Answering the Call: The Green Movement</b>  |           |
| <b>2 Motivating Forces .....</b>                      | <b>17</b> |
| Wake-Up Calls .....                                   | 17        |
| A Rediscovery of Ancient Values .....                 | 19        |
| The Global Sustainability Agenda .....                | 21        |
| The Response of Industry .....                        | 23        |
| <b>3 External Drivers: The Voice of Society .....</b> | <b>27</b> |
| <i>Green Expectations</i> .....                       | 27        |
| How Clean Is Green? .....                             | 29        |
| Confronting Climate Change .....                      | 30        |
| Governmental Initiatives: Stick and Carrot .....      | 33        |
| International Directives .....                        | 33        |
| United States Initiatives .....                       | 35        |
| Environmental Management System Standards .....       | 38        |
| Sustainability Rating Schemes .....                   | 40        |
| Eco-Labeling Programs .....                           | 41        |
| Voluntary Codes and Principles .....                  | 43        |
| Environmental Advocacy Groups .....                   | 45        |
| <b>4 Business Value Drivers .....</b>                 | <b>49</b> |
| Sustainability Goes Mainstream .....                  | 49        |
| Evolution of Environmental Strategy .....             | 50        |
| Pathways to Value Creation .....                      | 55        |
| The Sustainability Landscape .....                    | 62        |

## **Part 2 Charting the Course: The Art and Science of Design for Environment**

|          |  |            |
|----------|--|------------|
| <b>5</b> | <b>Managing Environmental Innovation</b> .....           | <b>69</b>  |
|          | The Rise of Green Markets .....                          | 69         |
|          | Integrated Product Development .....                     | 70         |
|          | Organizing for Environmental Excellence .....            | 72         |
|          | Practicing Concurrent Engineering .....                  | 75         |
|          | Understanding Product Life Cycles .....                  | 79         |
|          | Collaborating with Stakeholders .....                    | 81         |
| <b>6</b> | <b>Principles of Design for Environment</b> .....        | <b>83</b>  |
|          | <i>Life-Cycle Thinking</i> .....                         | 84         |
|          | System Perspective .....                                 | 87         |
|          | Indicators and Metrics .....                             | 88         |
|          | Design Strategies .....                                  | 89         |
|          | Analysis Methods .....                                   | 92         |
|          | Information Technology .....                             | 92         |
|          | Learning from Nature .....                               | 93         |
|          | From Principles to Practices .....                       | 95         |
| <b>7</b> | <b>Performance Indicators and Metrics</b> .....          | <b>97</b>  |
|          | Measure Up! .....  | 97         |
|          | Why Measure Environmental Performance? .....             | 98         |
|          | Enterprise Performance Frameworks .....                  | 100        |
|          | Identifying Aspects and Indicators .....                 | 103        |
|          | Choosing Environmental Performance Metrics .....         | 106        |
|          | Relationship of Metrics to Indicators .....              | 106        |
|          | Categories of Metrics .....                              | 109        |
|          | Applicability and Scope of Metrics .....                 | 111        |
|          | Aggregation and Scoring Schemes .....                    | 113        |
|          | Future Challenges and Opportunities .....                | 114        |
| <b>8</b> | <b>Design Rules and Guidelines</b> .....                 | <b>117</b> |
|          | DFE Rules! .....   | 117        |
|          | Catalogue of DFE Guidelines .....                        | 119        |
|          | A. Design for Dematerialization .....                    | 124        |
|          | A.1 Design for Energy and Material<br>Conservation ..... | 125        |
|          | A.2 Design for Source Reduction .....                    | 130        |
|          | A.3 Design for Servicization .....                       | 132        |
|          | B. Design for Detoxification .....                       | 134        |
|          | B.1 Design for Release Reduction .....                   | 134        |
|          | B.2 Design for Hazard Reduction .....                    | 136        |
|          | B.3 Design for Benign Waste Disposition .....            | 138        |

|  |            |
|--|------------|
| C. Design for Revalorization                   | 141        |
| C.1 Design for Product Recovery                | 141        |
| C.2 Design for Product Disassembly             | 142        |
| C.3 Design for Recyclability                   | 145        |
| D. Design for Capital Protection and Renewal   | 149        |
| D.1 Design for Human Capital                   | 149        |
| D.2 Design for Natural Capital                 | 152        |
| D.3 Design for Economic Capital                | 156        |
| Advanced Resource Recovery                     | 160        |
| Resource Cascading                             | 160        |
| Industrial Ecology                             | 162        |
| <b>9 Analysis Methods for Design Decisions</b> | <b>165</b> |
| Analyze This!                                  | 165        |
| Tangible Evaluation                            | 167        |
| Qualitative Assessment                         | 167        |
| Criteria-Based Checklists                      | 168        |
| Scoring Matrices                               | 169        |
| Environmental Analysis                         | 172        |
| Footprint Indicators                           | 173        |
| Life-Cycle Assessment                          | 178        |
| Predictive Simulation                          | 181        |
| Risk Analysis                                  | 184        |
| Financial Analysis                             | 187        |
| Life-Cycle Accounting                          | 187        |
| Cost/Benefit Analysis                          | 189        |
| Examples of DFE Decisions                      | 191        |
| Consumer Electronic Product Design             | 191        |
| Heat Transfer Process Design                   | 193        |
| The Challenges of Decision Making              | 194        |
| <b>10 Product Life-Cycle Management</b>        | <b>197</b> |
| Putting It All Together                        | 197        |
| Caterpillar: New Engines from Old              | 201        |
| Extended Producer Responsibility               | 201        |
| Benefits of Remanufacturing                    | 203        |
| Design for Remanufacturing                     | 205        |
| 3M: Responsible Innovation                     | 206        |
| A History of Environmental Leadership          | 206        |
| Life Cycle Management Program                  | 207        |
| Examples of Product Applications               | 209        |
| Toward Sustainable Supply Chain                |            |
| Management                                     | 211        |
| Integrated Business Decision Making            | 213        |

**Part 3 Walking the Talk: The Real-World Practice of Design for Environment**

|           |  |            |
|-----------|--|------------|
| <b>11</b> | <b>Electronic Equipment Industries</b> .....                   | <b>219</b> |
|           | Overview .....   | 219        |
|           | Xerox Corporation: Reducing the Footprint<br>of Printing ..... | 222        |
|           | A Pioneering Commitment .....                                  | 222        |
|           | Designing Total Systems .....                                  | 224        |
|           | Closing the Loop through Asset Recovery .....                  | 226        |
|           | Customer Benefits .....  | 228        |
|           | Hewlett Packard: A Green Giant .....                           | 228        |
|           | Stewardship the HP Way .....                                   | 228        |
|           | Design for Environment Program .....                           | 229        |
|           | Greening the Data Center .....                                 | 231        |
|           | Sony Electronics: Innovation in Design .....                   | 232        |
|           | Green Management .....   | 232        |
|           | Life-Cycle Innovation .....                                    | 233        |
| <b>12</b> | <b>Transportation Industries</b> .....                         | <b>235</b> |
|           | Overview .....   | 235        |
|           | Sustainable Mobility Research .....                            | 236        |
|           | DFE in the Transportation Life Cycle .....                     | 237        |
|           | General Motors: Product and Process Innovation .....           | 241        |
|           | A Roadmap for Sustainability .....                             | 241        |
|           | Chevrolet Volt: A New Automotive DNA .....                     | 243        |
|           | By-Product Management: No More Landfilling .....               | 244        |
|           | Toyota: The Future of Propulsion .....                         | 246        |
|           | DuPont: Eco-Efficient Automotive Paint .....                   | 247        |
| <b>13</b> | <b>Chemical Industries</b> .....                               | <b>251</b> |
|           | Overview .....   | 251        |
|           | Green and Sustainable Chemistry .....                          | 252        |
|           | Dow Chemical: Raising the Bar .....                            | 256        |
|           | The Journey toward Sustainability .....                        | 256        |
|           | Polyethylene from Sugar Cane .....                             | 257        |
|           | Green Chemistry at Dow AgroSciences .....                      | 258        |
|           | DuPont: Realizing Sustainable Growth .....                     | 260        |
|           | BASF: Beyond Eco-Efficiency .....                              | 262        |
| <b>14</b> | <b>Medical and Pharmaceutical Industries</b> .....             | <b>265</b> |
|           | Overview .....   | 265        |
|           | Health Care Without Harm .....                                 | 266        |
|           | Johnson & Johnson: A Matter of Principle .....                 | 267        |
|           | Healthy Planet Initiative .....                                | 267        |
|           | DFE Practices .....  | 268        |

|           |   |            |
|-----------|---|------------|
|           | Baxter: Saving and Sustaining Lives .....         | 270        |
|           | A Culture of Sustainability .....                 | 270        |
|           | Product Sustainability Review .....               | 271        |
|           | Product End-of-Life .....                         | 273        |
|           | Integrated “Lean and Clean” Engineering .....     | 274        |
|           | Eli Lilly and Company: Reducing the Environmental |            |
|           | Footprint .....                                   | 274        |
|           | Environmental Achievements and Goals .....        | 274        |
|           | Leading-Edge Environmental Practices .....        | 276        |
|           | Applying Green Chemistry for Source Reduction ..  | 276        |
|           | Lean Six Sigma for Environmental Performance ..   | 278        |
|           | Sustainable Packaging for Medical Devices .....   | 278        |
| <b>15</b> | <b>Food and Beverage Industries .....</b>         | <b>281</b> |
|           | Overview .....                                    | 281        |
|           | Coca-Cola: Global Responsibility .....            | 283        |
|           | Measuring Environmental Performance .....         | 283        |
|           | Sustainable Packaging .....                       | 284        |
|           | Sustainable Refrigeration .....                   | 286        |
|           | ConAgra Foods: Packaging Innovation .....         | 287        |
|           | General Mills: Nourishing the Future .....        | 289        |
|           | Unilever: A Vitality Mentality .....              | 290        |
| <b>16</b> | <b>Consumer Products Industries .....</b>         | <b>293</b> |
|           | Overview .....                                    | 293        |
