Contents

Preface to the Sixth Edition	xi
Acknowledgments	xiii
List of Symbols	xv
CHAPTER 1 Introduction: Basic Principles	1
1.1 Definition of a Turbomachine	1
1.2 Coordinate System	2
1.3 The Fundamental Laws	4
1.4 The Equation of Continuity	5
1.5 The First Law of Thermodynamics	5
1.6 The Momentum Equation	7
1.7 The Second Law of Thermodynamics—Entropy	9
1.8 Bernoulli’s Equation	11
1.9 Compressible Flow Relations	12
1.10 Definitions of Efficiency	15
1.11 Small Stage or Polytropic Efficiency	18
1.12 The Inherent Unsteadiness of the Flow within Turbomachines	24
References	26
Problems	26
CHAPTER 2 Dimensional Analysis: Similitude	29
2.1 Dimensional Analysis and Performance Laws	29
2.2 Incompressible Fluid Analysis	30
2.3 Performance Characteristics for Low Speed Machines	32
2.4 Compressible Fluid Analysis	33
2.5 Performance Characteristics for High Speed Machines	37
2.6 Specific Speed and Specific Diameter	40
2.7 Cavitation	47
References	49
Problems	50
CHAPTER 3 Two-Dimensional Cascades	53
3.1 Introduction	53
3.2 Cascade Geometry	56
3.3 Cascade Flow Characteristics	59
3.4 Analysis of Cascade Forces	64
3.5 Compressor Cascade Performance	68

3.6	Turbine Cascades	78
	References	92
	Problems	94
CHAPTER 4	<i>Axial-Flow Turbines: Mean-Line Analysis and Design</i>	97
4.1	Introduction	97
4.2	Velocity Diagrams of the Axial-Turbine Stage	99
4.3	Turbine Stage Design Parameters	100
4.4	Thermodynamics of the Axial-Turbine Stage	101
4.5	Repeating Stage Turbines	103
4.6	Stage Losses and Efficiency	105
4.7	Preliminary Axial Turbine Design	107
4.8	Styles of Turbine	109
4.9	Effect of Reaction on Efficiency	113
4.10	Diffusion within Blade Rows	115
4.11	The Efficiency Correlation of Smith (1965)	118
4.12	Design Point Efficiency of a Turbine Stage	121
4.13	Stresses in Turbine Rotor Blades	125
4.14	Turbine Blade Cooling	131
4.15	Turbine Flow Characteristics	133
	References	136
	Problems	137
CHAPTER 5	<i>Axial-Flow Compressors and Ducted Fans</i>	143
5.1	Introduction	143
5.2	Mean-Line Analysis of the Compressor Stage	144
5.3	Velocity Diagrams of the Compressor Stage	146
5.4	Thermodynamics of the Compressor Stage	147
5.5	Stage Loss Relationships and Efficiency	148
5.6	Mean-Line Calculation Through a Compressor Rotor	149
5.7	Preliminary Compressor Stage Design	153
5.8	Simplified Off-Design Performance	157
5.9	Multi-Stage Compressor Performance	159
5.10	High Mach Number Compressor Stages	165
5.11	Stall and Surge Phenomena in Compressors	166
5.12	Low Speed Ducted Fans	172
5.13	Blade Element Theory	174
5.14	Blade Element Efficiency	176
5.15	Lift Coefficient of a Fan Aerofoil	176
	References	177
	Problems	179

CHAPTER 6	Three-Dimensional Flows in Axial Turbomachines	183
6.1	Introduction	183
6.2	Theory of Radial Equilibrium	183
6.3	The Indirect Problem	185
6.4	The Direct Problem	193
6.5	Compressible Flow Through a Fixed Blade Row	194
6.6	Constant Specific Mass Flow	195
6.7	Off-Design Performance of a Stage	197
6.8	Free-Vortex Turbine Stage	198
6.9	Actuator Disc Approach	200
6.10	Computer-Aided Methods of Solving the Through-Flow Problem	206
6.11	Application of Computational Fluid Dynamics to the Design of Axial Turbomachines	209
6.12	Secondary Flows	210
	References	212
	Problems	213
CHAPTER 7	Centrifugal Pumps, Fans, and Compressors	217
7.1	Introduction	217
7.2	Some Definitions	220
7.3	Thermodynamic Analysis of a Centrifugal Compressor	221
7.4	Diffuser Performance Parameters	225
7.5	Inlet Velocity Limitations at the Eye	229
7.6	Optimum Design of a Pump Inlet	230
7.7	Optimum Design of a Centrifugal Compressor Inlet	232
7.8	Slip Factor	236
7.9	Head Increase of a Centrifugal Pump	242
7.10	Performance of Centrifugal Compressors	244
7.11	The Diffuser System	251
7.12	Choking In a Compressor Stage	256
	References	258
	Problems	259
CHAPTER 8	Radial Flow Gas Turbines	265
8.1	Introduction	265
8.2	Types of Inward-Flow Radial Turbine	266
8.3	Thermodynamics of the 90° IFR Turbine	268
8.4	Basic Design of the Rotor	270
8.5	Nominal Design Point Efficiency	272
8.6	Mach Number Relations	276
8.7	Loss Coefficients in 90° IFR Turbines	276

8.8	Optimum Efficiency Considerations	278
8.9	Criterion for Minimum Number of Blades	283
8.10	Design Considerations for Rotor Exit	286
8.11	Significance and Application of Specific Speed	291
8.12	Optimum Design Selection of 90° IFR Turbines	294
8.13	Clearance and Windage Losses	296
8.14	Cooled 90° IFR Turbines	297
	References	298
	Problems	299
CHAPTER 9	Hydraulic Turbines	303
9.1	Introduction	303
9.2	Hydraulic Turbines	305
9.3	The Pelton Turbine	308
9.4	Reaction Turbines	317
9.5	The Francis Turbine	317
9.6	The Kaplan Turbine	324
9.7	Effect of Size on Turbomachine Efficiency	328
9.8	Cavitation	330
9.9	Application of CFD to the Design of Hydraulic Turbines	334
9.10	The Wells Turbine	334
9.11	Tidal Power	346
	References	349
	Problems	350
CHAPTER 10	Wind Turbines	357
10.1	Introduction	357
10.2	Types of Wind Turbine	360
10.3	Outline of the Theory	364
10.4	Actuator Disc Approach	364
10.5	Estimating the Power Output	372
10.6	Power Output Range	372
10.7	Blade Element Theory	373
10.8	The Blade Element Momentum Method	381
10.9	Rotor Configurations	389
10.10	The Power Output at Optimum Conditions	397
10.11	HAWT Blade Section Criteria	398
10.12	Developments in Blade Manufacture	399
10.13	Control Methods (Starting, Modulating, and Stopping)	400
10.14	Blade Tip Shapes	405
10.15	Performance Testing	406

10.16	Performance Prediction Codes	406
10.17	Environmental Considerations	408
	References	411
	Problems	413
Appendix A:	Preliminary Design of an Axial Flow Turbine for a Large Turbocharger	415
Appendix B:	Preliminary Design of a Centrifugal Compressor for a Turbocharger	425
Appendix C:	Tables for the Compressible Flow of a Perfect Gas	433
Appendix D:	Conversion of British and American Units to SI Units	445
Appendix E:	Answers to Problems	447
Index	451
