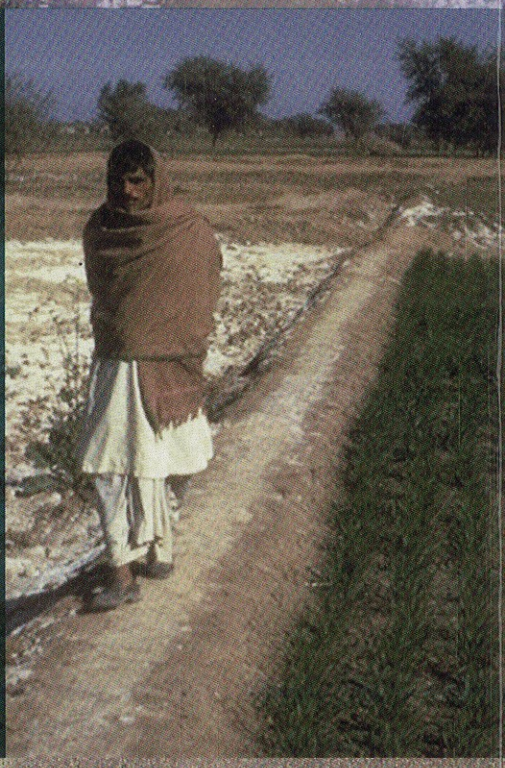
Water Requirements for Irrigation and the Environment



Springer

Contents

1 Introduction 1

1.1 Growth of Vegetation 1
1.2 Crop Growth and Evapotranspiration 4
1.3 The Water Balance of an Area 5
1.4 The Water Balance of an Irrigated Field 7
1.5 Calculating the Crop Irrigation Water Requirements 8
1.6 ET_p - P_e in the Field Water Balance 10
1.7 The Irrigation Ratios 11
1.8 Structure of the Handbook 11

2 Evapotranspiration 13

2.1 Introduction 13
2.2 Developments in Theory 14
2.2.1 Evaporation from Open Water: The Penman Method 17
2.2.2 The FAO Modified Penman Method 21
2.3 The Penman-Monteith Approach 23
2.3.1 The Equation 23
2.3.2 Effect of Time Step Size on Calculations 26
2.3.3 Computation of Parameters for the Penman-Monteith Reference Equation 26
2.3.4 Limited Data Availability and Weather Data Integrity 35
2.4 The Hargreaves-Samani Method 36
2.5 Discussion 37
2.6 The Potential ET 39
2.6.1 The Crop Coefficient Curve 41
2.6.2 The Climatic Basis of Table 2.5 43
2.6.3 Lengths of Crop Growth Stages 43
2.6.4 Single K_c for the Initial Stage (Annual Crops) 55
2.6.5 K_c Curves for Forage Crops 63
2.7 The Dual K_c Method: Incorporating Specific Wet Soil Effects 64
2.7.1 Theory 64
2.7.2 Water Balance of the Soil Surface Layer 68

2.7.3 Application of the Basal K_{cb} Procedure over a Growing Season 70
2.8 ET During the Non-growing Season 73
2.9 Evapotranspiration from Landscapes 73
2.10 Estimating K_c from the Fraction of Ground Cover 76
2.11 Effects of Surface Mulching on K_c 78
2.11.1 Plastic Mulches 79
2.11.2 Organic Mulches 80

3 Effective Precipitation 81

3.1 Introduction 81
3.2 Major Factors Affecting Effective Precipitation 83
3.2.1 Amount and Frequency of Precipitation 83
3.2.2 Time of Occurrence of Precipitation 85
3.2.3 Rainfall Intensity 85
3.2.4 Dry and Wet Spell Analysis 85
3.2.5 Irrigated Crops 85
3.2.6 Infiltration Rate 86
3.2.7 Water-Holding Capacity 86
3.2.8 Soil Water Movement 86
3.2.9 Field Slope 87
3.2.10 Land Surface Condition 87
3.2.11 Depth to Groundwater 87
3.2.12 Irrigation Water Supply Method 87
3.2.13 Frequency of Water Application 88
3.2.14 Scale Effect 88
3.3 The USDA Method 88
3.3.1 The Three Major Factors Used 88
3.3.2 Calculation Method 89
3.4 The Curve Number Method 91
3.4.1 Background of the Method 91
3.4.2 Factors Determining the Curve Number Value 94
3.4.3 Estimating the Curve Number Value 97

4 Capillary Rise 103

4.1 Introduction 103
4.2 The Driving Force of Capillary Water 103
4.3 Steady-State Capillary Rise 106
4.4 Fluctuation of Groundwater Depth and Soil Moisture 108
4.5 Rooting Depth 112
4.6 How To Correct for Capillary Rise? 113

5 Irrigation Water Requirements 119

5.1 The Concept 119
5.2 The Field 120
5.2.1 Dry-Foot Crops 122
5.2.2 Paddy Rice 124
5.2.3 Water Application Methods 125
5.3 The Distribution System 128
Example 132
5.4 The Conveyance System 137
5.5 Calculating Irrigation Water Requirements 141

6 Using the CRIWAR Software 143

6.1 Introduction 143
6.2 Computer System Requirements 143
6.3 Obtaining the Software 143
6.3.1 Installation 144
6.3.2 Starting the Program 144
6.4 Software Overview 144
6.5 Input Data Requirements 145
6.5.1 Entering General Data 146
6.5.2 Entering Meteorological Data 149
6.5.3 Entering Cropping Pattern Data 150
6.5.4 Entering Crop File Data 153
6.6 Developing a Water Management Strategy 154
6.6.1 Strategy for a Sustainable Water Balance 154
6.6.2 Strategy on Water Requirement of the Irrigated Crop 158
6.6.3 Analyzing Alternative Water Management Strategies 160
6.7 Producing Output 162
6.7.1 Tables & Graphs 162
6.8 Program Options 162
6.8.1 User Name 163
6.8.2 Choose Units System 164
6.9 Warnings and Error Messages 164
6.9.1 Additional Warnings 164
