<i>Foreword</i>	<i>v</i>
<i>Preface</i>	<i>vii</i>
<i>Preface to the First Edition</i>	<i>xi</i>

VOLUME I

Project Management—Construction Equipment Concrete Production and Placement

1. Project Management	1-146
Managing Committees	11
Skilled and Stable Force	12
Project Management	12
Accountability	14
Advice	15
Appraisal	15
Authority	15
Management Philosophy	15
Challenges	15
Communication	15
Coordination	17

Dress Culture	17
Computers	18
Implementing a Critical-path System	19
Purchase Department	22
Purchasing Non-genuine and Cheap Materials	22
Purchase Organisation	22
Vendors	23
Expediting and Receiving	23
Receiving Goods	24
Storing Material	24
Controlling Stock	25
Stock Recording	25
Systems for Recording	25
Bin Card	25
Cardex System	26
Computer System	
Inventory	26
Procurement of Spares	28
Supply of Parts	29
Examination By Purchase Section	31
Initial Supply of Parts	32
Need of Proper Purchase Organisation	32
Scaling	32
Subsequent Provisioning	32
Minimising Critical Indents	33
Inventory Control System	33
Categories of Requirement of Spare Parts	34
Record-keeping	34
ABC Analysis (High, Medium, and Low Value Analysis)	35
Maximum and Minimum Stock Limits and Quantity on Order	37
Centralised Inventory Control	39
Integrated Management Systems	41
The Construction Management System (CMS)	42
Construction Work Breakdown Structure	42
CMS System	45
Engineering Management System (EMS)	45
Material Management	45
Enhancements to Present Systems	46
Integration with the Engineering Design Process	47
Three-dimensional Solids Modeling	47
Plant Digital Model (PDM)	49
Integration of CMS with PDM	50
System Initiation	50

VOLUME II
Drilling—Blasting and Tunnelling

4. Drilling and Blasting	859-1061
Explosives	859
Low Explosives	860
High Explosives	860
Nitroglycerine Explosives	861
Non-nitroglycerine Explosives	865
High Detonation Pressure	867
Piped Charges	869
Non-EI Firing System	869
Initiating Explosives	870
Electric Detonators	870
Delay Detonators	871
Short Delay Detonators	872
Delay or Long Delay Detonators	872
Detonating Fuse	872
Initiation of Slurry Explosives	873
Principles of Drilling and Blasting	873
Quarrying/Open Cut Excavation	873

Drilling Pattern	874
Main Blasting Parameters	877
Calculating of Spacing	879
Length of Stemming Column	879
Blasting Economy	881
The Cut	883
Selection of Explosive	884
Optimising Drilling and Blasting	884
Influence of Delay Interval on Blasting Efficiency	886
Control of Fly Rock	887
Bench Blasting with Reduced Drilling Pattern	889
Charge Calculation Procedure	891
Drilling Pattern	891
General Observation	895
Charge Factor	896
Small Diameter Holes	896
Medium Diameter Holes	898
Loading of Holes	899
Large Diameter Holes	902
Spacing of Holes	903
Line Drilling	904
Illustration of Line Drilling Method	906
Pre-splitting Method	908
Pre-splitting Technique Adopted on Ranjit Sagar (Thein) Dam, Punjab	913
Vibration Control	914
Cautious Blasting	915
General	915
Ground Vibrations	916
Criteria for Damage and Recommendations	921
Geological Factors Influencing Ground Vibrations	924
Planning of Blasting Operations	928
Instruments to Measure Ground Vibrations	930
Vibrations in Rock and Soil—Damage Criteria and Ground Vibration	
Limits In Urban Areas	931
Structural Response	932
Ground Response	933
Factors Affecting the Vibration Frequency Content	934
Safe Vibration Levels	934
Instrumentation	940
Calculations of Charge Weights	940
Conclusions	941
Drilling Equipment	941
Drill Types	942

Faster Drilling	943
Manoeuvrability	946
Valveless Downhole Drills	946
Blast Hole Drills	948
Crawlair Drill	949
Drill Steel	950
Rotary Drill Evaluation	952
Drilling Cost	953
Drilling Rate	954
Effect of Air Pressure	954
Maintenance	956
Optimum Air Pressure for Drilling Rock	957
Determining the Increase in Production Resulting from an Increase in air Pressure	962
Proper Spacing of Blast Holes	963
Blasthole Drills	965
Piston Drills	965
Instructions for the Drilling/Blasting Crew	966
Pneumatic Drilling	966
Hydraulic Drifter System	966
Ergonomy and Easy Operation	967
Optimal Drilling	967
Application of Electric Hydraulic Drilling at Falcon Bridges Nickel Mines Ltd. (Canada)	968
Conclusions	970
Hydraulic Drilling for Underground Rock Excavation	970
Optimum Utilisation of Hydraulics	970
Cost of Blasting and Powder Factor	975
Drilling and Blasting Costs	976
Case Study 1: Ennore Port (Chennai), India	993
Introduction	993
Geology of Quarry	998
Quarry Exploitation	998
Mucking/Removal of Blast Material	999
Operational Sequences:	1001
Transfer Station:	1001
Ennore Port Site:	1001
Drilling and Blasting	1001
Blasting	1006
Toe Formation	1011
Case Study 2: Indira Sagar Project (M.P.), India	1014
Introduction	1014
Case Study 3: Sequential Blasting	1032

Advantages	1032
System Description	1033
Electronic Sequential Exploder	1033
Safety Features	1034
Application of Sequential Blasting System on Tehri Rock-fill Dam (India)	1035
Case Study 4: Quarry Blasting at Omkareshwar Multipurpose Project, (M.P.), India	1041
General	1041
Case Study 5: Asena Quarry Excavation for Rip-Rap Material Tehri Dam (Uttarakhand), India	1046
Geo-technical Properties of Quarry Rock	1046
Hill Quarry Excavation	1047
Excavation Pattern of Asena Quarry	1049
Sequence of Excavation	1049
Conclusions	1061

5. Tunnelling 1062-1592

Introduction	1062
Investigation	1063
Geological Survey	1063
Determination of the Cross-section	1064
Groundwater Control in Tunnel Construction	1065
Problems with Water in the Tunnel	1065
Groundwater Hydrology	1065
Soil Mechanics	1066
Pumping Tests	1067
Available Methods of Predrainage	1067
Hydro Active Polyurethane Grouts	1068
Types of Cuts in Tunnelling	1070
Drilling Pattern	1070
Depth of Holes	1073
Consumption of Explosives	1073
Drilling and Blasting for Large-section Tunnels	1074
Bottom Heading—Over-hand Stopping	1074
Top Heading—Under-hand Stopping	1075
Angled or V-cut	1075
Burn Cut	1078
Controlled Blasting at Sardar Sarovar (Narmada) Project, Gujarat (India)	1086
Prediction of Vibration Level	1087
Electronic Programmable Detonators	1094
Conclusion	1095
Methods of Tunnel Driving	1123

Full-face Heading	1123
Heading and Bench Method	1125
Ring Drilling Method	1125
Other Methods of Tunnelling	1129
Side Drifts Method	1132
Probing the Strata	1133
Forepoling Method in Japan	1135
Applicable Geology	1136
Range of Drilling and Tube Driving	1136
Pre-injection in Hard Rock Tunnelling	1137
Cementitious Grouts	1140
Ground Freezing	1141
Sealing Tunnels	1142
Rock Mass Classification	1144
Barton, Lien and Lunde (1974)—Q-System	1144
Rock Mass Rating (RMR)	1150
Characterising Rock Masses by the RMI Method	1160
The Rock Mass Index (RMI)	1161
Possible Applications of the RMI	1168
Methods to Determine the Block Volume	1169
Block Volume Measured Directly <i>in situ</i> or in Drill Cores	1170
Block Volume Found from Joint Spacings	1170
A Case-based Reasoning (CBR) System for Tunnel Support Design	1172
Drilling and Rock Mechanics	1173
TBM Performance Using Q_{TBM}	1175
Cutter Wear	1179
Penetration and Advance Rate in Relation to Q_{TBM}	1180
Estimating Times for Completion	1182
Conclusions	1183
Abrasiveness of Quartzite	1183
Concept of Equivalent Quartz Content	1183
Conclusion	1184
Drilling bit Consumption and Mineral Content	1184
Selection of Equipment	1187
Muck Hauling Equipment	1188
Haulage Equipment Selection	1194
Tunnel Jumbos	1200
Advantages of Drill Jumbos	1204
Special Features of Modern Jumbos	1204
Drifters Used on Jumbos	1205
Computer Controlled Drilling Jumbos	1207
Tunnel Boring Machines	1207
Development of Tunnel Boring Machines	1210
Backup Equipment	1215

Project Considerations	1217	
Coal Mine Application	1217	
Machine and Accessory Cost Considerations	1218	
Types of Moles	1223	
Application of Tunnel Boring Machine in Bad Ground	1235	
Geology	1235	
Muck Removal	1237	
Excavation Cost	1237	
Machine Tunnelling versus Conventional Method	1241	
Suitability of Rock	1243	
Machine Tunnelling Costs	1244	
Conclusion	1249	
Performance of a Hard Rock TBM	1251	
Shield Tunnelling	1257	
Construction Features of a Tunnel Shield	1258	
Shield Advancement	1260	
Excavation	1262	
Mechanical Boring of a Mixed Face Tunnel	1267	
Soft Ground Machines	1267	
Rock Boring Machines	1267	
Mixed Face Machines	1268	
General Observation	1270	
Boom Improvements	1270	
Flexibility	1271	
Adaptability	1274	
Geology	1276	
Each Cutter Averaged 660 m	1277	
Flows of Water in This Heading Reached 1700 litre/s at One Stage	1278	
Geology and Hydrogeology	1278	
Invert Segments	1279	
Backup System	1279	
Rock-support	1279	
Tunnel System at Klippen (Sweden)	1280	
Layout-tunnelling	1280	
Rock Geology	1281	
New Dimensions in TBMs	1285	
Shield Machines	1286	
Gripper Machines	1286	
Mobile Mining Machines	1286	
Fluid Balance (FB) System	1289	
Variable Frequency Drive (VFD)	1291	
Prediction of Penetration and Utilisation	1295	
Comparison of Different TBMs	1296	
Database	1297	

New Tunnelling Method: The Mechanical Pre-cutting	1299
In Hard Rock: Cut & Blast	1299
New Materials	1302
Heavy Duty Roadheading Machines	1302
Cutting Boom	1303
Loading System	1305
Main Frame and Crawlers	1305
Power	1305
Operation	1306
New Austrian Tunnelling Method (NATM)	1306
Key Features	1308
Raise Boring	1315
Value of Proper Rock Analysis	1320
Supply of Compressed Air	1321
Recent Developments in Raise Boring and Shaft Boring	1325
Raise Drills	1325
Optional Approaches to Mechanical Raising	1326
Recommendation	1329
Machine Selection	1329
Machine Utilisation	1329
Conclusion	1330
Guide Rail Climbing Jumbo	1330
Shaft Mucker	1333
Mechanical Shaft Sinking	1335
Design Considerations	1336
Conclusions	1341
Application of Compressed Air	1342
Lining Segments for Shield-driven Tunnels	1345
Sprayed Concrete	1347
Roof Bolts, Wire Mesh and Sprayed Concrete	1348
Operating Principle	1348
Output	1349
Capacities	1349
Mechanics of Cavity Formation and Shotcrete Support	1350
Shotcrete as Optimum Ground Support	1351
Shotcrete Mix	1351
Shotcreting	1352
Steel Fibre Reinforced Shotcrete	1355
Rock Support-Shotcrete	1357
Design of Shotcrete Support	1358
Empirical Methods	1358
Shotcrete Materials	1359
Cement	1359

Supplementary Cementing Materials	1359
Aggregates	1360
Chemical Admixtures	1361
Shotcrete Accelerators	1362
Shotcrete Reinforcement	1363
Steel Fibre Reinforcement	1363
Shotcrete Mixture Proportioning	1365
Properties of Plastic Shotcrete	1366
Wet-mix Shotcrete	1366
Properties of Hardened Shotcrete	1367
Compressive and Flexural Strength	1367
Permeability	1367
Shrinkage Crack Control	1368
Shotcrete Application	1369
Materials for Shotcreting	1369
Microsilica for Cost Effective Shotcrete	1369
Microsilica: an Excellent Pozzolana	1370
Application Areas of Microsilica Shotcrete	1371
Steel and High Performance Polymer Fibre Reinforcement	1373
Wet Process Shotcrete	1373
Shotcreting Trucks	1375
Sand Gravel Enveloped Cement (SGEC) Method	1375
Moist Moisture Paste Incorporated (MMPI) Method	1376
Shotcreting on Screen in Cabin	1378
Tunnels Supports	1379
Spiles	1379
Steel Rib Supports	1379
Preformed Linings	1380
Steel Supports on Beas Project (1964)	1381
Word of Caution	1384
Hydraulic Pump Load Calculations	1385
Design of Circular Ribs on Beas Project, India	1385
Precast Reinforced Concrete Segments	1386
Precasting Jumbo	1386
Rock Bolting	1390
Mechanised Scaling and Roof Support Systems	1395
Development of Modern Rock Bolting Systems	1397
Rock Bolting	1397
Mechanised Bolting	1399
One-man Operation	1399
Concreting	1401
Concrete Lining of Tunnels on the Beas Project	1403
Concreting Method	1403

Concrete Mix	1411
Transport of Concrete	1411
Placing Concrete	1412
Pneumatic Methods	1412
Compaction of Concrete and Shutter Striking	1413
Continuous Concrete Lining of Tunnels	1413
Sequence of Operation	1414
Telescopic Collapsible Folding Shutters	1416
Cycle Time and Planning Aspects	1416
Grouting	1418
Concrete Placing Equipment	1419
Ventilation of Long Tunnels	1430
Permissible Limits of Pollution	1433
Requirement of a Ventilation System	1434
Design Parameters	1434
Methods of Ventilation	1435
Composition of Concrete for Concrete Pumps	1436
A Word of Caution	1436
Tunnelling at Nathpa-Jhakri Hydel Project (India)	1439
Geology along Tunnel Alignment	1439
Tunnel Support System	1441
Excavation of HRT	1441
Ventilation System	1444
Surge Shaft	1444
Methodology of Excavation	1446
Surge Shaft Lining	1448
Parameters	1451
Slipforming Technique	1451
Upper Portion of Shaft	1451
Preparatory Work	1452
Jack Rods	1452
Platform Decking	1452
Assembly of Hydraulic System	1452
Placement of Concrete	1453
Recovery of Jack Rods	1453
Concreting of Head Race Tunnel (HRT)	1454
Invert	1455
Arch	1458
Concrete Transport and Distribution	1458
Work Sequence	1458
Crossing the Daj Khad Shear Zone by the Drainage-Reinforcement-Excavation Support Solution (DRESS)	1459
Summary of the Excavation Solution	1464
Cost Analysis	1469

Drainage, Reinforcement, Excavation, Support Solution (Dress) Methodology	1469
Introduction	1469
Head Race Tunnel	1470
Tackling Shear Zone in Original Alignment	1471
Tackling Shear Zone in Diverted Alignment	1475
Treatment of Collapsed Zone	1476
DRESS Methodology	1477
ODEX method	1477
Excavation and Supporting Sequence	1478
Time Cycle	1481
Recent Technological Developments	1482
Development in Drilling Equipment	1482
Explosives	1482
Ventilation	1483
Mucking Equipment	1483
Supporting System	1484
Grouting	1484
Drainage	1484
Concrete Lining	1484
English Channel Tunnel	1485
Introduction	1485
Eurotunnel Shuttle Services	1486
Passenger Shuttles	1487
Freight Shuttles	1487
Alignment and Geology	1488
Geology	1492
Geological and Geotechnical Criteria	1493
Main Alignment Operational Criteria	1493
Crossover	1496
Typical Underground Structures	1496
Undersea Crossovers	1498
Cross Adits	1499
Piston Relief Ducts	1502
Segmental Tunnel Linings	1502
UK Linings	1504
French Linings	1505
Cast Iron Linings	1507
Shakespeare Works	1511
Shakespeare Cliff	1511
Fond Pignon Dam	1518
Construction	1518
Terminal Sites	1522
Surveying	1525

Safety	1526	
Cooling of Channel Tunnel	1529	
Construction of the A20 Round Hill Tunnels	1531	
Safety and Temporary Facilities	1536	
Delhi Metro Rail Project	1538	
Introduction	1538	
Benefit of Delhi Metro	1538	
Administrative Structure	1539	
Services Description Phase-I	1539	
Construction Methodology	1540	
Brief Description of Tunnel Boring Machines used on Delhi Metro Rail Project (DMRP)	1540	
Salient Features of TBM	1541	
Main Components of a TBM	1541	
Working Principle of TBM	1542	
Equipment and Manpower Required	1544	
Tunnelling Methodologies	1545	
High-Tech 'Underground' Progress	1546	
Operation	1548	
Earth Pressure Balance Machine (EPBM)	1548	
Construction of Underground Stations in Delhi Metro Project	1551	
Geological Conditions	1554	
Construction Methodology	1554	
Excavation Methodology	1554	
Construction Method for Chawri Bazaar	1555	
Controlled Bench Blasting	1557	
Steps of Controlled Bench Blasting	1557	
Actual Blasting	1559	
Monitoring of the Vibrations	1559	
Results	1559	
In-House Material Management	1559	
Batching Plant for Quality Concrete	1559	
Crushing Plant for Aggregates	1560	
Dumping Yard	1560	
Water and Admixture	1560	
Excavation and Earthwork	1560	
Concreting	1562	
Dewatering	1562	
Waterproofing	1563	
Monitoring of Ground Movements	1564	
<i>Backfilling and Landscaping</i>	1564	
Tunnel Lining with Precast Concrete Segments	1564	
Progress of TBMs	1565	
Monitoring	1565	

Maintenance	1566	
Safety Measures	1566	
Delhi Metro—an Appreciation	1569	
Alimineti Madhava Reddy Project (AMRP), Andhra Pradesh (AP), India		1570
Refrigeration Plant for Cooling of Water for Cutter Head of TBM	1589	
<i>Bibliography</i>		1593
<i>Index</i>		1605
<i>About the Book and Author</i>		1615
