

Second Edition

IMMUNOLOGY

Understanding the Immune System

Klaus D. Elgert

 WILEY-BLACKWELL

CONTENTS

Preface, ix

Note to Reader, xi

1. Introduction to the Immune System, 1
 2. Cells and Organs of the Immune System, 27
 3. Innate Immunity, 61
 4. Antigens and Antibodies, 105
 5. Antigen-Antibody Interactions and Some Experimental Systems, 139
 6. The Genetics of Antibody Formation and Structure, 179
 7. The Major Histocompatibility Complex and Development of Immunity, 213
 8. The T-Cell Receptor Complex: Characterization, Diversification, Costimulatory Molecules, Thymic Selection, and T-Cell Activation, 253
 9. Cytokines, 285
 10. Cellular Interactions: Development of Effector Functions and Their Regulation, 321
 11. Complement, 369
 12. Hypersensitivities, 397
 13. Immunologic Tolerance and Autoimmunity, 431
 14. Transplantation Immunology, 461
 15. Tumor Immunology, 489
 16. Immunodeficiencies, 529
 17. Immunity to Microbes, 561
- Glossary of Commonly Used Immunologic Terms, 611
- Appendix: Human Cluster of Differentiation (CD) Molecules, 687
- Index, 703
