Contents

Preface	ix
1 The Emerging Core and Metropolitan Networks	1
<i>Andrea Di Giglio, Angel Ferreiro and Marco Schiano</i>	
1.1 Introduction	1
1.1.1 Chapter's Scope and Objectives	1
1.2 General Characteristics of Transport Networks	1
1.2.1 Circuit- and Packet-Based Network Paradigms	2
1.2.2 Network Layering	3
1.2.3 Data Plane, Control Plane, Management Plane	4
1.2.4 Users' Applications and Network Services	4
1.2.5 Resilience	5
1.2.6 Quality of Service	7
1.2.7 Traffic Engineering	8
1.2.8 Virtual Private Networks	10
1.2.9 Packet Transport Technologies	11
1.3 Future Networks Challenges	12
1.3.1 Network Evolution Drivers	12
1.3.2 Characteristics of Applications and Related Traffic	12
1.3.3 Network Architectural Requirements	17
1.3.4 Data Plane, Control Plane, and Management Plane Requirements	24
1.4 New Transport Networks Architectures	31
1.4.1 Metropolitan Area Network	33
1.4.2 Core Network	36
1.4.3 Metro and Core Network (Ultra-long-term Scenario)	38
1.5 Transport Networks Economics	39
1.5.1 Capital Expenditure Models	39
1.5.2 Operational Expenditure Models	42
1.5.3 New Business Opportunities	44
Acronyms	52
References	54

2	The Advances in Control and Management for Transport Networks	55
	<i>Dominique Verchere and Bela Berde</i>	
2.1	Drivers Towards More Uniform Management and Control Networks	55
2.2	Control Plane as Main Enabler to Autonomic Network Integration	58
	2.2.1 <i>Generalized Multi-Protocol Label Switching</i>	59
	2.2.2 <i>Evolution in Integrated Architectures</i>	71
2.3	Multilayer Interactions and Network Models	74
	2.3.1 <i>Introduction</i>	74
	2.3.2 <i>Vertical Integration and Models</i>	78
	2.3.3 <i>Horizontal Integration and Models</i>	79
	2.3.4 <i>Conclusions on UNI Definitions from ITU-T, OIF, IETF, and OIF UNI: GMPLS UNI Interoperability Issues</i>	104
2.4	Evolution of Connection Services and Special Cases of Optical Networks	105
	2.4.1 <i>Evolution in Network Services</i>	105
	2.4.2 <i>Virtual Private Networks</i>	106
	2.4.3 <i>Layer 1 VPN</i>	109
	2.4.4 <i>Layer 2 VPN</i>	118
	2.4.5 <i>Layer 3 VPN</i>	122
2.5	Conclusion	123
	References	124
3	Elements from Telecommunications Engineering	127
	<i>Chris Matrakidis, John Mitchell and Benn Thomsen</i>	
3.1	Digital Optical Communication Systems	127
	3.1.1 <i>Description of Signals in the Time and Frequency Domains</i>	127
	3.1.2 <i>Digital Signal Formats</i>	132
3.2	Performance Estimation	135
	3.2.1 <i>Introduction</i>	136
	3.2.2 <i>Modeling</i>	141
	3.2.3 <i>Comparison of Techniques</i>	146
	3.2.4 <i>Standard Experimental Measurement Procedures</i>	149
	References	158
4	Enabling Technologies	161
	<i>Stefano Santoni, Roberto Cigliutti, Massimo Giltrelli, Pasquale Donadio, Chris Matrakidis, Andrea Paparella, Tanya Politi, Marcello Potenza, Erwan Pincemin and Alexandros Stavdas</i>	
4.1	Introduction	161
4.2	Transmitters	161
	4.2.1 <i>Introduction</i>	161
	4.2.2 <i>Overview of Light Sources for Optical Communications</i>	167
	4.2.3 <i>Transmitters for High Data-Rate Wavelength-Division Multiplexing Systems</i>	178

4.3	Receiver	202
4.3.1	<i>Overview of Common Receiver Components</i>	202
4.4	The Optical Fiber	212
4.4.1	<i>Short Introduction to the Waveguide Principle</i>	213
4.4.2	<i>Description of Optical Single-Mode Fibers</i>	216
4.4.3	<i>Special Fiber Types</i>	222
4.5	Optical Amplifiers	223
4.5.1	<i>Introduction to Optical Amplifiers</i>	225
4.5.2	<i>Principle of Operation</i>	229
4.5.3	<i>Gain Saturation</i>	231
4.5.4	<i>Noise</i>	234
4.5.5	<i>Gain Dynamics</i>	235
4.5.6	<i>Optical Fiber and Semiconductor Optical Amplifiers</i>	236
4.5.7	<i>Raman Amplifiers</i>	239
4.5.8	<i>Lasers and Amplifiers</i>	243
4.6	Optical Filters and Multiplexers	245
4.6.1	<i>Introduction</i>	245
4.6.2	<i>Optical (De-)Multiplexing Devices</i>	246
4.6.3	<i>Overall Assessment of (De-)Multiplexing Techniques</i>	256
4.6.4	<i>Optical Filters</i>	257
4.6.5	<i>Tunable Filters</i>	260
	References	263
5	Assessing Physical Layer Degradations	267
	<i>Andrew Lord, Marcello Potenza, Marco Forzati and Erwan Pincemin</i>	
5.1	Introduction and Scope	267
5.2	Optical Power Budgets, Part I	268
5.2.1	<i>Optical Signal-to-Noise Ratio and Q Factor</i>	268
5.2.2	<i>Noise</i>	273
5.2.3	<i>Performance Parameters, Light Path Evaluation Rules</i>	290
5.2.4	<i>Transmission Impairments and Enhancements: Simple Power Budgets</i>	295
5.3	System Bandwidth	334
5.3.1	<i>System Bandwidth, Signal Distortion, Intersymbol Interference</i>	334
5.3.2	<i>Fiber-Optical Nonlinear Effects</i>	346
5.3.3	<i>Optical Transients</i>	356
5.4	Comments on Budgets for Nonlinear Effects and Optical Transients	362
5.4.1	<i>Compensators/Equalizers</i>	363
5.4.2	<i>CD Equalization</i>	363
5.4.3	<i>PMD Equalization</i>	364
5.4.4	<i>Simultaneous Presence of Distortions, Electronic Equalization, and Cumulative Filtering</i>	364
5.4.5	<i>General Features of Different Modulation Formats</i>	368
5.5	Semianalytical Models for Penalties	370
5.6	Translucent or Hybrid Networks	370
5.6.1	<i>Design Rules for Hybrid Networks</i>	371

5.7	Appendix	372
5.7.1	<i>Dispersion Managed Links</i>	372
5.7.2	<i>Intrachannel Nonlinear Effects</i>	374
	References	378
6	Combating Physical Layer Degradations	381
	<i>Herbert Haunstein, Harald Rohde, Marco Forzati, Erwan Pincemin, Jonas Martensson, Anders Djupsjöbacka and Tanya Politi</i>	
6.1	Introduction	381
6.2	Dispersion-Compensating Components and Methods for CD and PMD	382
6.2.1	<i>Introduction on Optical CD and PMD Compensator Technology</i>	382
6.2.2	<i>Optical Compensation Schemes</i>	383
6.2.3	<i>Key Parameters of Optical Compensators</i>	387
6.2.4	<i>Compensators Suitable for Translucent Networks</i>	389
6.2.5	<i>Impact of Group-Delay Ripple in Fiber Gratings</i>	391
6.3	Modulation Formats	396
6.3.1	<i>On-Off Keying Modulation Formats</i>	397
6.3.2	<i>Comparison of Basic OOK Modulation Formats: NRZ, RZ, and CSRZ for 40 Gbit/s Transmission</i>	400
6.3.3	<i>A Power-Tolerant Modulation Format: APRZ-OOK</i>	408
6.3.4	<i>DPSK Modulation Formats</i>	412
6.3.5	<i>Spectrally Efficient Modulation Formats</i>	414
6.4	Electronic Equalization of Optical Transmission Impairments	416
6.4.1	<i>Electronic Equalization Concepts</i>	416
6.4.2	<i>Static Performance Characterization</i>	420
6.4.3	<i>Dynamic Adaptation of FFE- and DFE-Structures</i>	420
6.4.4	<i>General Remarks</i>	423
6.5	FEC in Lightwave Systems	424
6.5.1	<i>Application of FEC in Lightwave Systems</i>	424
6.5.2	<i>Standards for FEC in Lightwave Systems</i>	425
6.5.3	<i>FEC Performance Characterization</i>	426
6.5.4	<i>FEC Application in System Design</i>	429
6.6	Appendix: Experimental Configuration and Measurement Procedure for Evaluation and Comparison for Different Modulation Formats for 40 Gbit/s Transmission	431
6.6.1	<i>Simulation Setup</i>	434
	Acknowledgments	435
	References	435
	Dictionary of Optical Networking	441
	<i>Didier Colle, Chris Matrakidis and Josep Solé-Pareta</i>	
	Acronyms	465
	Index	477
