

A Concise Introduction to

Additives for Thermoplastic Polymers

Johannes Karl Fink

 WILEY

Scrivener

Contents

Preface	xiii
1 Introduction	1
1.1 Classification	1
References	3
2 Plasticizers	5
2.1 Principle of Action	6
2.2 Principle of Selection	6
2.3 Characterization	7
2.4 Risks and Drawbacks	8
2.4.1 Leaching	8
2.4.2 Inherent Toxicity	9
2.5 Classes of Plasticizers	9
2.5.1 Phthalate Plasticizers	9
2.5.2 Cyclohexanoic Diesters	12
2.5.3 Phosphate Plasticizers	13
2.5.4 Aliphatic Esters	13
2.5.5 Polymeric Plasticizers	14
2.5.6 Ionic Liquids	15
2.6 Specific Examples of Application	16
2.6.1 Heat Shrinkable Films	16
2.6.2 Adhesive Compositions	17
2.6.3 Interlayer Films for Safety Glasses	17
2.6.4 Electrolyte Membranes	18
2.6.5 Porous Electrodes	18
2.6.6 Biodegradable Polymers	19
2.6.7 Plasticizers for Energetic Polymers	20
References	21

3	Fillers	25
3.1	Surface Modification	25
3.1.1	Siloxanes	25
3.1.2	Dispersion and Coupling Additives	25
3.2	Special Applications	29
3.2.1	Flame Retardant Fillers	29
3.2.2	Conductive Fillers	30
3.2.3	Solder Precoated Fillers	32
3.2.4	Nano Clays	33
3.2.5	Mixed Matrix Membranes	34
	References	34
4	Colorants	37
4.1	Physics Behind a Color	37
4.1.1	Human Eye	37
4.1.2	Tristimulus Values	37
4.1.3	Color Spaces	39
4.2	Color Index	40
4.3	Test Standards	41
4.4	Pigments	43
4.5	Organic Colorants	43
	References	47
5	Optical Brighteners	49
5.1	Basic Principles	50
5.2	Measurement	51
5.3	Inorganic Brighteners	52
5.4	Organic Optical Brighteners	52
5.4.1	Reactive Optical Brighteners	52
5.4.2	Melt Extrusion	54
5.4.3	Photographic Supports	55
	References	56
6	Antimicrobial Additives	59
6.1	Modes of Action	59
6.1.1	Types of Irritations	60
6.2	Plasticizers	60

6.3	Special Formulations	65
6.3.1	Contact Lenses	65
6.3.2	Food Packaging	66
6.3.3	Polymers with Inherent Antimicrobial Properties	67
	References	68
7	Flame Retardants	71
7.1	Mechanisms of Flame Retardants	71
7.1.1	Flame Cooling of Halogens	71
7.2	Smoke Suppressants	73
7.3	Admixed Additives	74
7.4	Bonded Additives	77
7.4.1	Examples of Polymers	77
	References	83
8	Lubricants	87
8.1	Principle of Action	87
8.2	Methods of Incorporation	88
8.2.1	Conventional Method	88
8.2.2	Separate Delivery of the Lubricant	88
8.3	Types of Lubricants	89
8.3.1	Alcohols	89
8.3.2	<i>Fatty Acids, Esters and Amides</i>	90
8.3.3	Waxes	90
8.3.4	Polymeric Lubricants	91
8.4	Special Applications	91
8.4.1	PVC	91
8.4.2	Chlorinated PVC	91
8.4.3	Electrically Conductive Polymers	92
	References	92
9	Antistatic Additives	95
9.1	Types of Additives	95
9.2	Areas of Application	96
9.3	Additives in Detail	98
9.3.1	Conventional Additives	98
9.3.2	Polymeric Additives	100

9.3.3	External Antistatic Additives	101
9.3.4	Intrinsically Antistatic Compositions	101
9.3.5	Conductive Fillers	101
	<i>References</i>	104
10	Slip Agents	107
10.1	Basic Principles of Action	107
10.2	Compounds	109
10.3	Special Formulations	110
10.3.1	Poly(ethylene terephthalate)	110
10.3.2	Formulations for Poly(ethylene)	111
	<i>References</i>	111
11	Surface Improvers	113
11.1	Additives	114
11.1.1	Fluorocarbon Compounds	114
11.1.2	Acrylics	114
11.1.3	Modified Pigments	115
11.1.4	Organic Salts	116
	<i>References</i>	116
12	Nucleating Agents	119
12.1	Crystalline Polymers	120
12.1.1	Crystal Structures	120
12.1.2	Modification of Properties by Crystallinity	120
12.2	Experimental Methods	121
12.2.1	Nucleation Technologies	121
12.2.2	Characterization of Polymer Crystallization	121
12.3	Classes of Nucleating Agents	122
12.3.1	Inorganic Nucleating Agents	122
12.3.2	Sorbitol Compounds	123
12.3.3	Phosphates	124
12.3.4	Carbon Nanotubes	124
12.3.5	Coupled Nucleating Agents	124

12.4 Crystallization Accelerators	124
12.5 Clarifying Agents	125
References	125
13 Antifogging Additives	127
13.1 Field of Use	127
13.2 Principles of Action	128
13.2.1 Thermodynamics of Surfaces	128
13.3 Conventional Compounds	130
13.4 Compounds for Grafting	133
References	135
14 Antiblocking Additives	137
14.1 <i>Examples of Uses</i>	138
14.1.1 Film Resins	138
14.1.2 Sealable Coatings	140
14.1.3 Membranes	141
14.1.4 Poly(vinyl butyral)	142
References	144
15 Hydrolysis	145
15.1 Hydrolytic Degradation	145
15.1.1 Ordinary Hydrolysis	145
15.1.2 Enzymatic Hydrolysis	146
15.1.3 Stabilization	146
15.2 Polymers	146
15.2.1 Poly(ester)s	147
15.2.2 Poly(ester urethane)s	147
15.2.3 Poly(lactide)s	148
References	149
16 Dehydrochlorination Stabilizers	151
16.1 Dehydrochlorination of PVC	151
16.2 Stabilizers	152
16.2.1 Alkyl Tin Compounds	154
16.2.2 Mixed Metal Compounds	155
16.2.3 β -Diketones	155

16.2.4	Epoxidized fatty acids	155
16.2.5	Hydrotalcite Clays	156
16.2.6	Zeolites	157
16.2.7	Costabilizers	158
	<i>References</i>	158
17	Acid Scavengers	161
17.1	Acid Scavenging	161
17.2	Examples of Formulation	162
17.2.1	Poly(olefin)s	162
17.2.2	Poly(ethylene terephthalate)	163
17.2.3	Poly(urethane)s	163
	<i>References</i>	163
18	Metal Deactivators	165
18.1	Action of Metals in Polymers	165
18.2	Usage	166
18.2.1	Residues of Catalysts	166
18.2.2	Metallic Reinforcing Parts	166
18.3	Examples of Metal Deactivators	167
18.3.1	Side Effects	169
	<i>References</i>	170
19	Oxidative Degradation	173
19.1	Autoxidation	173
19.2	Inhibition of Autoxidation	174
	<i>References</i>	183
20	Degradation by Light	185
20.1	Photolysis	189
20.1.1	Redox Catalysis	190
20.1.2	Scavenging	190
20.2	Photooxidation	191
20.3	UV Stabilizers	193
	<i>References</i>	195
21	Blowing Agents	197
21.1	Blowing Agents	197
21.1.1	Physical Blowing Agents	198

24.1.2	Ingestion of PVC	240
24.1.3	Tricresyl Phosphate	242
24.2	Flame Retardants	242
24.2.1	HET-Acid	242
24.2.2	Brominated Diphenyl Ethers	243
24.3	Antifogging Agents	243
24.4	Other	244
24.4.1	Bisphenol A	244
24.4.2	Azodicarbonamide	244
	References	245

Index	249
Acronyms	249
Chemicals	251
General Index	261
