

Postharvest Biology and Technology for Preserving Fruit Quality

Daniel Valero and María Serrano

 **CRC Press**
Taylor & Francis Group

Contents

| | |
|--|-----------|
| Preface..... | ix |
| Acknowledgments | xiii |
| About the Authors | xv |
| List of Abbreviations | xvii |
| Chapter 1 Introduction and overview | 1 |
| Chapter 2 Fruit ripening..... | 7 |
| 2.1 Introduction..... | 7 |
| 2.2 Fruit growth | 8 |
| 2.3 Fruit ripening and related parameters | 10 |
| 2.3.1 Color changes | 11 |
| 2.3.2 Sugar and organic acids..... | 16 |
| 2.3.3 Fruit softening..... | 19 |
| 2.3.3.1 Cell wall composition and structure..... | 19 |
| 2.3.3.2 Cell wall changes during fruit softening | 22 |
| 2.3.4 Aroma compounds..... | 24 |
| 2.3.5 Bioactive compounds and antioxidant activity..... | 27 |
| 2.3.5.1 Phenolic compounds including anthocyanins | 28 |
| 2.3.5.2 Carotenoids..... | 35 |
| 2.3.5.3 Vitamins | 37 |
| 2.3.5.4 Thiol-SH compounds | 40 |
| 2.3.6 Health-related interactions of fruit phytochemicals | 42 |
| 2.3.7 Physiological changes | 42 |
| Chapter 3 Changes in fruit quality attributes during handling, processing, and storage..... | 49 |
| 3.1 Introduction..... | 49 |
| 3.2 What is quality? | 50 |
| 3.3 Weight loss..... | 51 |
| 3.4 Appearance..... | 52 |
| 3.5 Texture..... | 54 |

| | | |
|--|--|------------|
| 3.6 | Flavor, taste, and aroma..... | 56 |
| 3.7 | Bioactive compounds | 59 |
| 3.8 | Decay | 59 |
| 3.8.1 | Preharvest factors | 60 |
| 3.8.2 | Harvesting factors | 63 |
| 3.8.3 | Postharvest factors..... | 63 |
| 3.9 | Mechanical damage versus fruit quality | 65 |
| Chapter 4 Cold storage and fruit quality..... | | 69 |
| 4.1 | Introduction..... | 69 |
| 4.2 | Effect of low temperature storage on fruit metabolism | 69 |
| 4.3 | Cooling rates..... | 73 |
| 4.4 | Precooling techniques..... | 74 |
| 4.4.1 | Room cooling | 76 |
| 4.4.2 | Forced-air cooling..... | 77 |
| 4.4.3 | Hydro-cooling..... | 79 |
| 4.4.4 | Contact-icing..... | 81 |
| 4.4.5 | Vacuum cooling | 82 |
| 4.4.6 | Cryogenic cooling..... | 83 |
| 4.5 | Chilling injury | 83 |
| 4.5.1 | Role of ethylene in stimulating chilling injury | 87 |
| 4.5.2 | Minimizing chilling injury | 88 |
| Chapter 5 Heat treatments | | 91 |
| 5.1 | Introduction..... | 91 |
| 5.2 | Means of heat application..... | 92 |
| 5.2.1 | Hot water | 92 |
| 5.2.2 | Hot air..... | 92 |
| 5.2.3 | Vapor heat..... | 93 |
| 5.3 | Heat treatments and fruit quality storability | 93 |
| 5.3.1 | Fruit ripening | 95 |
| 5.3.2 | Bioactive compounds with antioxidant activity | 101 |
| 5.3.3 | Minimizing chilling injury | 103 |
| 5.3.4 | Reducing decay..... | 106 |
| 5.4 | Limitations: Heat damage | 107 |
| Chapter 6 Calcium treatments | | 109 |
| 6.1 | Introduction..... | 109 |
| 6.2 | Calcium sources and pre- and postharvest methods for application | 110 |
| 6.3 | Pre- and postharvest calcium treatments and calcium fruit content | 111 |
| 6.4 | Effect of preharvest treatment on fruit size..... | 113 |
| 6.5 | Calcium treatments and fruit firmness | 114 |

| | | |
|------------------|---|------------|
| 6.6 | Calcium treatments and color, soluble solids, and total acidity | 117 |
| 6.7 | Calcium treatment and bioactive compounds | 119 |
| 6.8 | Calcium treatment, cell membrane stability, and CI reduction | 120 |
| 6.9 | Effects of calcium treatment on postharvest decay | 121 |
| 6.10 | Calcium treatment and ethylene production and respiration rate | 122 |
| 6.11 | Undesirable effects of calcium treatments | 124 |
| Chapter 7 | Polyamine treatments | 125 |
| 7.1 | Introduction | 125 |
| 7.2 | Polyamine biosynthesis and regulation in plant tissues | 127 |
| 7.3 | Polyamine and human diet | 128 |
| 7.4 | Polyamine and fruit development | 131 |
| 7.5 | Preharvest polyamine application and fruit ripening | 134 |
| 7.6 | Postharvest polyamine application and fruit quality | 136 |
| 7.6.1 | Ethylene production | 136 |
| 7.6.2 | Fruit quality parameters | 138 |
| 7.6.3 | Bioactive compounds with antioxidant activity | 141 |
| 7.7 | Polyamines and chilling injury | 142 |
| 7.8 | Polyamines and mechanical damage | 146 |
| 7.9 | Future trends | 148 |
| Chapter 8 | 1-Methylcyclopropene treatments | 151 |
| 8.1 | Introduction | 151 |
| 8.2 | 1-MCP as blocking ethylene receptors | 153 |
| 8.3 | Postharvest 1-MCP application | 155 |
| 8.3.1 | Ethylene production, respiration rate, and 1-MCP | 156 |
| 8.3.2 | Effect of 1-MCP on fruit quality parameters | 162 |
| 8.3.3 | 1-MCP, bioactive compounds, and antioxidant activity | 168 |
| 8.4 | 1-MCP in nonclimacteric fruits | 169 |
| 8.5 | Preharvest 1-MCP application | 170 |
| 8.6 | 1-MCP on physiological and pathological disorders | 171 |
| Chapter 9 | Storage in modified atmosphere packaging | 175 |
| 9.1 | Introduction | 175 |
| 9.2 | Films used in MA packaging | 175 |
| 9.3 | Generation of the steady-state or equilibrium atmosphere | 177 |
| 9.4 | Optimal CO ₂ and O ₂ concentration | 179 |
| 9.5 | Importance of temperature stability | 180 |
| 9.6 | MAP and fruit quality maintenance | 181 |
| 9.6.1 | Weight loss | 182 |
| 9.6.2 | Respiration rate | 182 |
| 9.6.3 | Ethylene production | 183 |

| | | |
|---|---|------------|
| 9.6.4 | Color, ripening index, and firmness | 183 |
| 9.6.5 | Phytochemical compounds | 186 |
| 9.6.6 | Decay and sensory quality | 187 |
| 9.6.7 | Susceptibility to chilling injury | 187 |
| 9.7 | MAP benefits for storage of fresh-cut fruits and vegetables | 188 |
| 9.8 | Future research needs | 190 |
| Chapter 10 Active packaging | | 191 |
| 10.1 | Introduction | 191 |
| 10.2 | Active packaging technologies | 192 |
| 10.3 | Ethylene adsorbers | 193 |
| 10.4 | Antimicrobial fruit packaging | 197 |
| 10.5 | Edible coatings | 203 |
| 10.6 | Future trends | 209 |
| Chapter 11 Emerging technologies | | 211 |
| 11.1 | Introduction | 211 |
| 11.2 | Atmospheres with high O ₂ | 211 |
| 11.3 | Biological control | 213 |
| 11.4 | UV-irradiation | 216 |
| References | | 219 |
| Index | | 255 |
