Preface Acknowledgements List of Abbreviations			page xi xiii xv	
1.	Introduction			1
	1.1	Categor	ries of Waste and Waste Generation in the Modern World Radioactive Wastes from Nuclear Power and	1
			Defence Operations	2
		1.1.2	Toxic and Hazardous Wastes	7
		1.1.3	Other Sources of Waste Material	9
	1.2	General	l Disposal Options	11
	1.3	Radiati	on Issues	19
	1.4	Waste I	Disposal and the Oklo Natural Nuclear Reactors	21
	1.5	Nuclear	r Accidents and the Lessons Learnt	25
		Referen	nces	31
2.	Materials Toxicity and Biological Effects		37	
	2.1	Metals		38
		2.1.1	Beryllium, Barium and Radium	38
		2.1.2	Vanadium	39
		2.1.3	Chromium, Molybdenum and Tungsten	40
		2.1.4	Manganese, Technetium and Rhenium	40
		2.1.5	Platinum-Group Metals	41
		2.1.6	Nickel	42
		2.1.7	Copper, Silver and Gold	42
		2.1.8	Zinc, Cadmium and Mercury	43
		2.1.9	Aluminium and Thallium	45
		2.1.10	Tin and Lead	46
		2.1.11	Arsenic, Antimony and Bismuth	48
		2.1.12	Selenium, Tellurium and Polonium	49
		2.1.13	Thorium, Uranium, Neptunium, Plutonium and Americium	m 50
	2.2	Compo	unds	51
	2.3	Asbesto	os	51
		Referen	aces	55

3.	Glass	and Cerar	nic Based Systems and General Processing Methods	57
	3.1	Glass For	rmation	58
		3.1.1	Glass-Forming Ability	58
		3.1.2	Thermal Stability	61
	3.2	Types of	Glass	61
		3.2.1	Silicate and Borosilicate Glasses	61
		3.2.2	Phosphate Glasses	61
		-	Rare Earth Oxide Glasses	62
		3.2.4	Alternative Glasses	62
	3.3	Ceramics	S	62
	3.4	Glass-Ce		63
	3.5		d Ceramic Based Composite Systems	68
	3.6	Processing of Glass and Ceramic Materials		68
			Melting and Vitrification	69
			Powder Processing and Sintering	69
			Hot Pressing	69
			Sol-Gel Processing	70
			Self-Propagating High Temperature Synthesis	70
			Microwave Processing	70 71
		Reference	ees	/ 1
4.				75
	4.1	Chemica	al Analysis	75
	4.2	Thermal	Analysis	76
	4.3	•		78
		4.3.1	Optical and Electron Microscopy	78
		4.3.2	Energy Dispersive Spectroscopy	79
			X-ray and Neutron Diffraction	79
		4.3.4	Infra-Red and Raman Spectroscopy	80
		4.3.5	Mössbauer Spectroscopy	80
			Nuclear Magnetic Resonance	80
	4.4		ical Properties	81
			Fracture Mechanics	81
			Flexural Strength of Materials	83
			Lifetime Behaviour	83
	4.5 Chemical Durability and Standardized Tests		87	
	4.6	 4.6 Radiation Stability 4.7 Other Properties Relevant to Wasteforms 4.8 Use of Nonradioactive Surrogates References 		92
				94
	4.8			94 96
5.	Radi	oactive Wa	astes	101
	5.1	Sources	and Waste Stream Compositions	101
		5.1.1	Nuclear Reactor Spent Fuel Wastes	102
		5.1.2	Defence Wastes	107

		5.1.3	Surplus Materials	108
		5.1.4	Special or Unusual Categories of Radioactive Waste	109
	5.2	General	l Immobilization Options	111
		Referen	ices	115
6.	Immo	bilizatior	n by Vitrification	121
	6.1	Vitrifica	ation History and the Advancement of Melter Design	121
	0.1	6.1.1	Pot Processes	122
		6.1.2	Continuous Melting by Induction Furnace	124
		6.1.3	Joule-Heated Ceramic Melters	128
		6.1.4	Cold Crucible Induction Melters	131
		6.1.5	Plasma Arc/Torch Melters	135
		6.1.6	Microwave Processing	138
		6.1.7	In situ Melting	138
		6.1.8	Bulk Vitrification	138
		6.1.9	Alternative Melting Techniques	138
		6.1.10	Vitrification Incidents and the Lessons that have been Learnt	
	6.2		It Waste Constituents	144
		6.2.1	Molybdenum and Caesium	144
		6.2.2	Platinum Group Metals	147
		6.2.3	Technetium	149
		6.2.4	Chromium, Nickel and Iron	150
		6.2.5	Halides	150
		6.2.6	Sulphates	150
		6.2.7	Phosphates	151
	6.3		of Specific Batch Additives on Melting Performance	151
	6.4		of Glass and Candidate Glass Requirements	151
		6.4.1	Silicate and Borosilicate Glass	151
		6.4.2 6.4.3	Phosphate Glasses Rare Earth Oxide Glasses	163 165
		6.4.4	Alternative Glasses	166
	6.5		Forming Ability	168
	6.6		ative Methods for Producing Glassy Wasteforms	169
	0.0	6.6.1	Sintered and Porous Glass	169
		6.6.2	Hot-Pressed Glass	171
		6.6.3	Microwave Sintering	175
		6.6.4	Self-Sustaining Vitrification	176
		6.6.5	Plasma Torch Incineration and Vitrification	177
		Referen		177
7.	Immo	bilizatio	n of Radioactive Materials as a Ceramic Wasteform	185
	7.1	Titopet	e and Zirconate Ceramics	185
	7.1		tate Ceramics	203
	7.2	-	nosilicate Ceramics	203
	7.3		nosineate Ceramics	209
	, , -		m. v Comme	

	7.5	Cement Based Systems References	211 212
8.	8. Immobilization of Radioactive Materials as a Glass-Ceramic Wasteforn		221
	8.1	Barium Aluminosilicate Glass-Ceramics	222
	8.2	Barium Titanium Silicate Glass-Ceramics	222
	8.3	Calcium Magnesium Silicate Glass-Ceramics	222
	8.4	Calcium Titanium Silicate Glass-Ceramics	227
	8.5	Basaltic Glass-Ceramics	228
	8.6	Zirconolite Based Glass-Ceramics	230
	8.7	Alternative Silicate Based Glass-Ceramics	234
	8.8	Phosphate Based Glass-Ceramics	234
		References	237
9.	9. Novel Hosts for the Immobilization of Special or Unusual Categories of		
	Radio	active Wastes	241
	9.1	Silicate Glasses	241
	9.2	Phosphate Glasses	246
	9.3	Alternative Vitrification Routes	249
	9.4	Ceramic-Based Hosts	251
	9.5	Glass-Encapsulated Composite and Hybrid Systems	253
	9.6	Oxynitride Glasses	259
	9.7	Plutonium Disposition References	260 266
10.	Prone	erties of Radioactive Wasteforms	275
10.	10.1	Thermal Stability	275
	10.1	Chemical Durability	276
	10.2	10.2.1 General Principles of Glass Durability	277
		10.2.2 Durability of Silicate Based Glasses in Water	282
		10.2.3 Durability of Silicate Based Glasses in Groundwaters and	202
		Repository Environments	291
		10.2.4 Durability of Phosphate Based Glasses	296
		10.2.5 Lessons to be Learnt from Archaeological Glasses	297
		10.2.6 Ceramic Durability	301
		10.2.7 Glass-Ceramic Durability	308
		10.2.8 Durability of Glass-Encapsulated Ceramic	
		Hybrid Wasteforms	309
		10.2.9 Influence of Colloids	310
	10.3	Radiation Stability	311
		10.3.1 Glass Stability	311
		10.3.2 Ceramic Stability	316
		10.3.3 Glass-Encapsulated Ceramic Hybrid Stability	323
	10.4	Natural Analogues	324
	10.5	Mechanical Properties	328
